

ENGLISH

ADVANCED PROGRAMMING

05 USER: (APPLiCAT® d only) it links an ID code (from 1 to 9999) to the user of the displayed consumption (three 1-phase independent users by instrument).

06 SELECTor: it allows selecting the variables combination (page) to be displayed according to the knob position (see fig.2); SELEC. 1 (2,3, LoC): it selects the knob position (1, 2, 3 o); PA.1 (36): it selects the page number to be displayed (from No. 1 to 36 see TAB 3). If the page relevant to the current position of the knob is not available for the required application, the instrument will display the first page available according to the list in table 3.

07 SYS: it allows selecting the electrical system. 3P.n: 3-phase unbalanced with or without neutral; 3P.I: 3-phase balanced with or without neutral; 2P: 2-phase; 1P: single phase.

08 Ut rAtio: VT ratio (0.1 to 6000). Example: if the connected VT primary is 5kV and the secondary is 100V, the VT ratio to be set is 50 (that is 5000/100).

09 Ct rAtio: CT ratio (0.1 to 60.00k). Example: if the connected CT primary is 3000A and the secondary is 5A, the CT ratio is 600 (that is: 3000/5).

10 P int.ti: it is the integration time used to calculate the demanded powers (Wdmd, VAdmd). The selectable range is between 1 and 30 minutes.

11 diG in 1 / diG in 2 / diG in 3: ("I3" option only) it allows defining the digital inputs function: rEM: for reading the digital input status by means of serial communication; SYnC: dmd calculation synchronisation; tAr: multi-tariff management (see also Tab. 6); GAS: gas metering; Cold: cold water metering; Hot: hot water metering; kWh + Hot: distant heating (kWh) meters. PrESCAL.1 (or 2 or 3): it sets the weight of each pulse (from 0.1 to 999.9 m³ or kWh per pulse). Note: the digital inputs have to be set with different modes among them, in case they are used for GAS, CoLd o Hot kWh+ Hot.

12 FiLTER.S: it allows selecting the operating range of the digital filter as % of the full scale values (1 to 100). Only in case of applications F, G and H.

13 FiLTER.Co: it allows selecting the filtering coefficient (from 1 to 32). The higher the coefficient, the higher is the stability and the updating time of the measurement.

14 AddrESS : ("SI" option only) it allows selecting the serial address of the instrument (from 1 to 247). bAudrAtE: it allows selecting the baud rate (9.600 or 4.800 baud).

15 diG out. 1 / diG out. 2 ("01", R2 or 03) it allows selecting the digital outputs function. PuLS: pulse output selection (the pulse weight is to be set too) (kWh/kvarh per pulse from 0.001 to 10.00); tEST: activated on the pulse output when "YES" is selected. In the further menu program the simulated power value (kW or kvar) is corresponding to a pulse frequency proportional to it and based on the "PULSEou.1/2/3". The test is active until you exit from this menu. AL: alarm output (this function is active only in case of application C, E, G and H), selection of the variable to be controlled (Ph.AL: phase sequence alarm), and deactivation setpoints "on AL" and "off AL", the delay on activation "tDEl" and the output status in normal condition, "nE" if normally energised or "nd" if normally de-energised, are to be set too. rEM: it allows the remote control of the digital output.

16 EnE t.rES: it allows the reset of all the total counters.

17 End: it allows exiting the programming mode by pressing the joystick in direction 1 (see fig. 1). Joystick directions 4 and 5 allow browsing the main menu again.

ITALIANO

PROGRAMMAZIONE AVANZATA

05 USER: (solo "APPLiCAT" d) associa un codice identificativo (da 1 a 9999) all'utente del consumo visualizzato (3 utenti monofase indipendenti per strumento).

06 SELECTor: seleziona combinazione variabili (pagina) da associare alla posizione del selettore frontale (fig. 2); SELEC. 1 (2, 3, LoC): seleziona la posizione del selettore (1, 2, 3 o); PA.1 (36): seleziona la pagina da visualizzare (da No. 1 a 36 vedere TAB 3). Se la pagina associata alla relativa posizione del selettore non è disponibile per l'applicazione richiesta, lo strumento visualizzerà la prima pagina disponibile secondo l'elenco riportato in tab. 3.

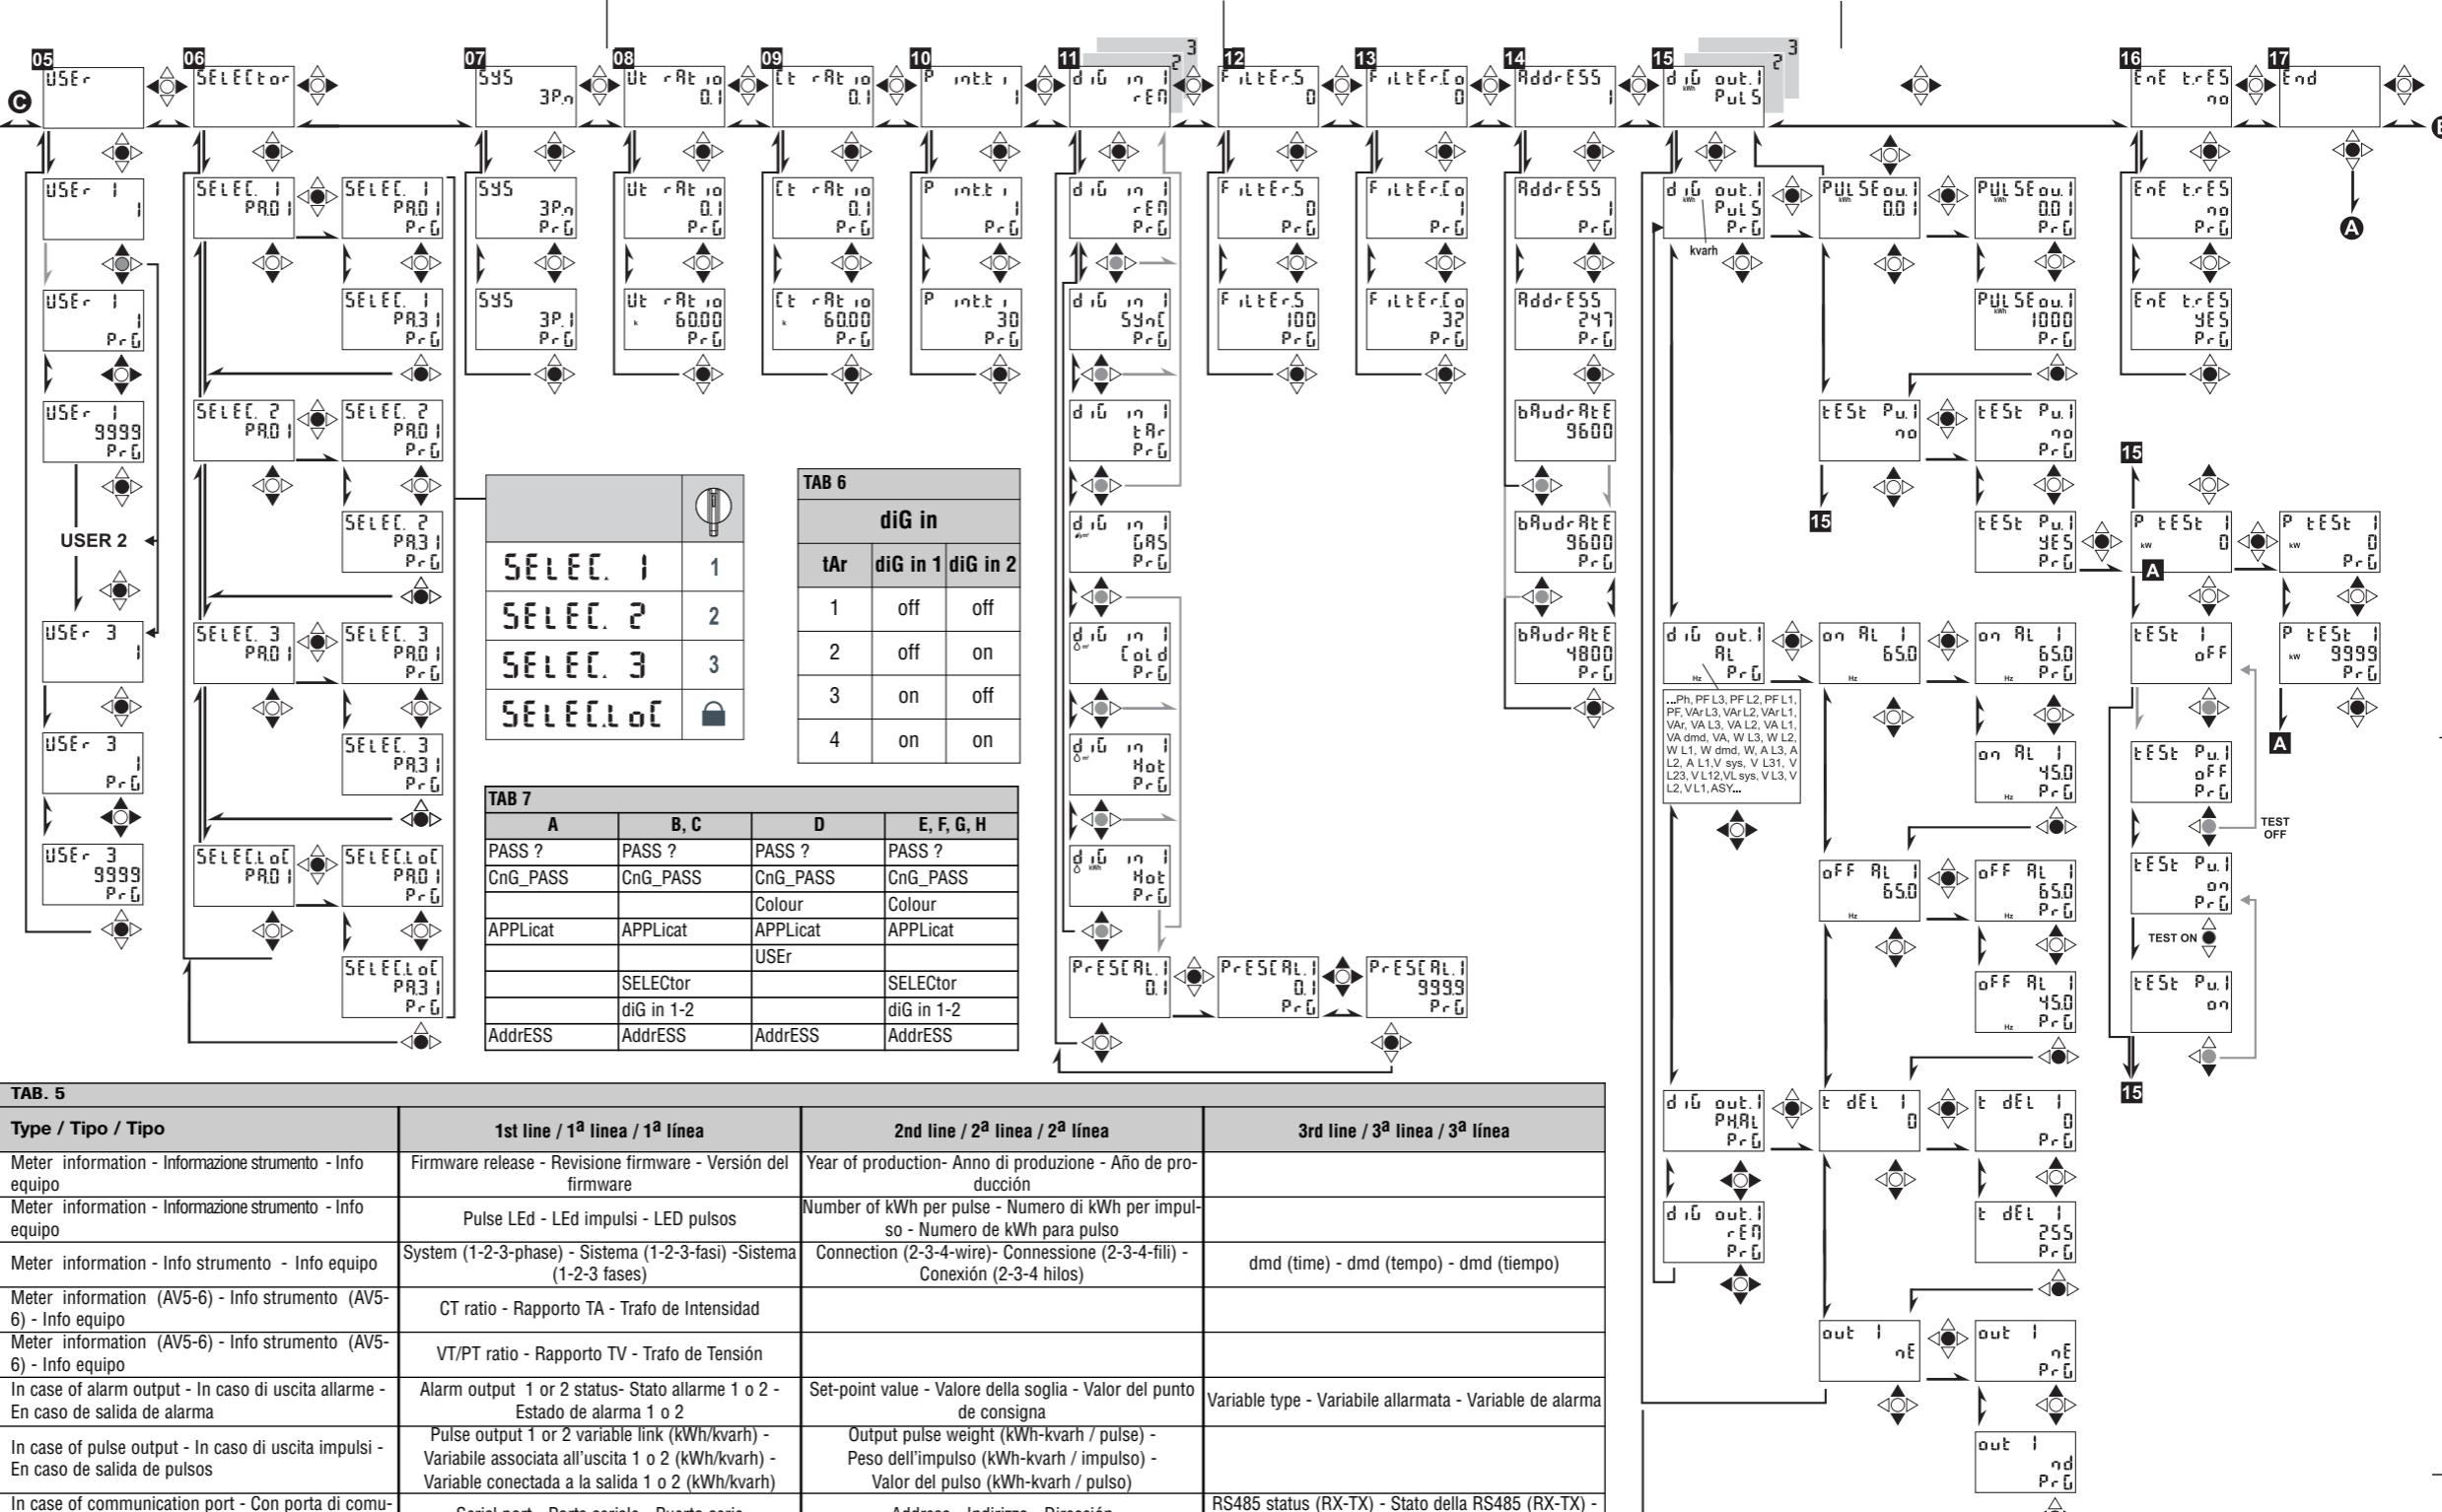

07 SYS : sistema elettrico: 3P.n: trifase sbilanciato con o senza neutro, 3P.I: trifase bilanciato con o senza neutro, 2P: bifase, 1P: monofase.

08 Ut rAtio : rapporto TV (da 0,1 a 6000). **Esempio:** se il primario del TV connesso è di 5kV e il secondario è di 100V il rapporto di TV corrisponde a 50 (ottenuto eseguendo il calcolo: 5000/100).

09 Ct rAtio : rapporto TA (da 0,1 a 60.00k). **Esempio:** se il primario del TA ha una corrente di 3000A e il secondario di 5A, il rapporto TA corrisponde a 600 (ottenuto eseguendo il calcolo: 3000/5).

10 P int.ti : tempo di integrazione per il calcolo della potenza media: selezionare il tempo desiderato da 1 a 30 minuti.

11 diG in 1 / diG in 2 / diG in 3 : (solo con opzione "I3") funzione

TAB. 5

Type / Tipo / Tipo	1st line / 1 ^a linea / 1 ^a línea	2nd line / 2 ^a linea / 2 ^a línea	3rd line / 3 ^a linea / 3 ^a línea
Meter information - Informazione strumento - Info equipo	Firmware release - Revisione firmware - Versión del firmware	Year of production- Anno di produzione - Año de producción	
Meter information - Informazione strumento - Info equipo	Pulse LED - LEd impulsi - LED pulsos	Number of kWh per pulse - Numero di kWh per impulso - Numero de kWh para pulso	
Meter information - Info strumento - Info equipo	System (1-2-3-phase) - Sistema (1-2-3-fasi) -Sistema (1-2-3 fases)	Connection (2-3-4-wire)- Connessione (2-3-4-fili) - Conexión (2-3-4 hilos)	dmd (time) - dmd (tempo) - dmd (tiempo)
Meter information (AV5-6) - Info strumento (AV5-6) - Info equipo	CT ratio - Rapporto TA - Trafo de Intensidad		
Meter information (AV5-6) - Info strumento (AV5-6) - Info equipo	VT/PT ratio - Rapporto TV - Trafo de Tensión		
In case of alarm output - In caso di uscita allarme - En caso de salida de alarma	Alarm output 1 or 2 status- Stato allarme 1 o 2 - Estado de alarma 1 o 2	Set-point value - Valore della soglia - Valor del punto de consigna	Variable type - Variabile allarmata - Variable de alarma
In case of pulse output - In caso di uscita impulsi - En caso de salida de pulsos	Pulse output 1 or 2 variable link (kWh/kvarh) - Variabile associata all'uscita 1 o 2 (kWh/kvarh) - Variable conectada a la salida 1 o 2 (kWh/kvarh)	Output pulse weight (kWh-kvarh / pulse) - Peso dell'impulso (kWh-kvarh / impulso) - Valor del pulso (kWh-kvarh / pulso)	
In case of communication port - Con porta di comunicazione - Con puerto de comunicación	Serial port - Porta seriale - Puerto serie	Address - Indirizzo - Dirección	RS485 status (RX-TX) - Stato della RS485 (RX-TX) - Estado RS485 (RX-TX)

ingressi digitali: rEM: per la remozione dello stato degli ingressi digitali; SYnC: sincronizzazione; tAr: tariffazione (Tab. 6); GAS: contatore gas; Cold: contatore acqua fredda; Hot: contatore acqua calda; kWh + Hot: teleriscaldamento (kWh). PrESCAL.1 (o 2 o 3): impostazione peso impulsi (da 0,1 a 999,9 m³ o kWh per impulso). Nota: nel caso di utilizzo per GAS, CoLd o HoT kWh+ Hot, gli ingressi digitali devono essere impostati modalità differenti tra loro.

12 FiLTER.S : campo di intervento del filtro digitale espresso in % del valore di fondo scala (da 1 a 100). Solo per applicazioni F, G e H.

13 FiLTER.Co : coefficiente di filtraggio da 1 a 32. Aumentando il coefficiente aumenta la stabilità e il tempo di assestamento dei valori visualizzati.

14 AddrESS : (solo con opzione "SI") indirizzo seriale: da 1 a 247. bAudrAtE: velocità di trasmissione dati (9.600; 4.800 bit/s).

15 diG out. 1 / diG out. 2 / diG out. 3: (solo con opzione "01, R2 o 03") funzione uscita digitale: PuLS: come uscita impulsi, seleziona il peso dell'impulso (kWh/kvarh per impulso da 0,001 a 10,00); tEST: attivo su uscita impulsi con selezione YES. Nel menù successivo impostare il valore di potenza (kW o kvar) simulata a cui corrisponderà una frequenza degli impulsi ad essa proporzionale in base a "PULSEou.1/2/3", la funzione è attiva finché si rimane nel menù. AL: come allarme (funzione attiva solo per le applicazioni C, E, G e H), seleziona la variabile da controllare (Ph.AL: allarme sequenza fase), le soglie "on AL" (attivazione) e "off AL" (disattivazione) il ritardo all'attivazione, da 0 a 255s, "t dEL" e lo stato dell'uscita

ta a riposo "nE" normalmente eccitata o "nd" normalmente disaccettata. rEM: permette il controllo in modo remoto dell'uscita digitale.

16 EnE t.rES: azzeramento di tutti i contatori totali.

17 End: per tornare al modo misura premere il joystick in direzione 1 (vedere figura 1), o in direzione 4-5 per restare nel menù di programmazione.

ESPAÑOL

PROGRAMACIÓN AVANZADA

05 USER: (solo "APPLiCAT" d) vincula un código ID (de 1 a 9999) al usuario del consumo visualizado (tres usuarios monofásicos independientes por instrumento).

06 SELECTor: permite seleccionar la combinación de variables (página) a visualizar, según la posición del interruptor (ver fig. 2); SELEC. 1 (2, 3, LoC): selecciona la posición del interruptor (1, 2, 3 o); PA.1 (36): selecciona el número de página a visualizar (desde 1 a 36, ver TAB 3). Si la página relativa a la posición actual del selector no está disponible para la aplicación deseada, el instrumento visualizará la primera página disponible según la lista de la tabla 3.

07 SYS: Permite seleccionar el sistema eléctrico. 3P.n: trifásico desequilibrado con o sin neutro; 3P.I: trifásico equilibrado con o sin neutro; 2P: bifásico; 1P: monofásico.

08 Ut rAtio: relación del trafo de tensión VT (0,1 a 6000). Ej.: si el primario del trafo conectado es 5kV y el secundario es 100V, la relación del trafo de tensión es 50 (es decir, 5000/100).

09 Ct rAtio: relación del trafo de intensidad CT (0,1 a 60,00k). Ej.: si el primario del trafo conectado es 3000A y el secundario es 5A, la relación del trafo de intensidad es 600 (es decir, 3000/5).

10 P int.ti: es el tiempo de integración usado para calcular las potencias demandadas (Wdmd, VAdmd). El rango seleccionable está entre 1 y 30 minutos.

11 diG in 1 / diG in 2 / diG in 3 (sólo opción "I3"): permite definir la función de las entradas digitales: rEM: para lectura del estado de la entrada digital mediante el puerto de comunicación serie; SYnC: cálculo de la sincronización dmd; tAr: gestión multitarifa (ver también Tab. 6); GAS: medición de gas; Cold: medición de agua fría; Hot: medición de agua caliente; kWh+Hot: lectura remota de calefacción (kWh). PrESCAL.1 (o 2 o 3): fija el valor de cada pulso (de 0,1 a 999,9m³ o kWh cada pulso). Si las entradas digitales son empleadas para medir: GAS, agua fría, agua caliente o calefacción remota cada entrada digital debe fijarse con una función diferente.

12 FiLTER.S : permite seleccionar el rango de funcionamiento del filtro digital como % del valor a fondo de escala (1 a 100). Solo para aplicaciones: F, G, H.

13 FiLTER.Co : permite seleccionar el coeficiente de filtrado (de 1 a 32). Cuanto mayor sea el coeficiente, mayor es la estabilidad y el tiempo de actualización de la medida.

14 AddrESS (sólo opción "SI"): permite seleccionar la dirección serie del instrumento (de 1 a 247). bAudrAtE: permite seleccionar los baudios (9.600 ó 4.800).

15 diG out. 1 / diG out. 2 / diG out. 3 (sólo opciones "01, R2 o 03"): permite seleccionar la función de las salidas digitales. PuLS: selección de salida

de pulsos, hay que fijar también el valor del pulso (kWh/kvarh por pulso de 0,001 a 10,00); tEST: activado en la salida de pulsos cuando se selecciona "YES". En el siguiente programa del menú, el valor de potencia simulado (kW o Kvar) se corresponde a una frecuencia de pulso proporcional y basado en "PULSE ou. 1/2/3". El test está activo hasta que se sale de este menú. AL: selección salida de alarma (esta función está activa sólo en el caso de las aplicaciones C, E, G y H), selección de la variable a controlar (Ph.AL: alarma de secuencia de fase) activación y desactivación de los puntos de consigna "on AL" y "off AL", retardo a la activación "tDEl" (de 0 a 255 segundos) y estado de las salidas en condición normal, hay que fijar también "nE" si es normalmente activada o "nd" si es normalmente desactivada. rEM: permite el control remoto de la salida digital.

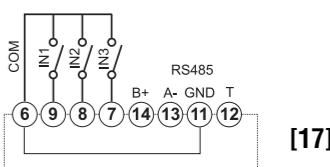

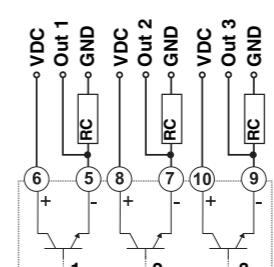

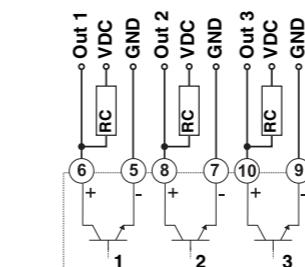

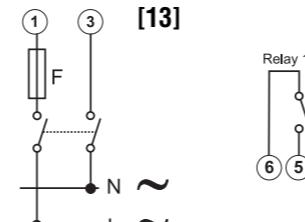

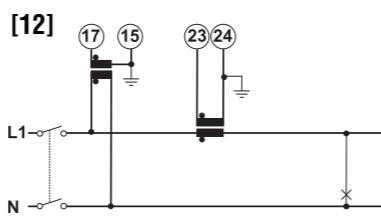

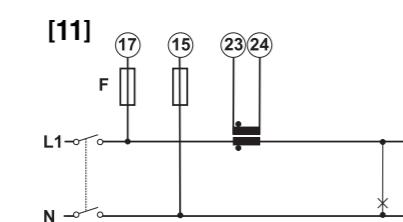

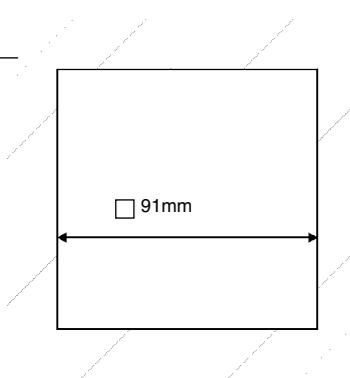

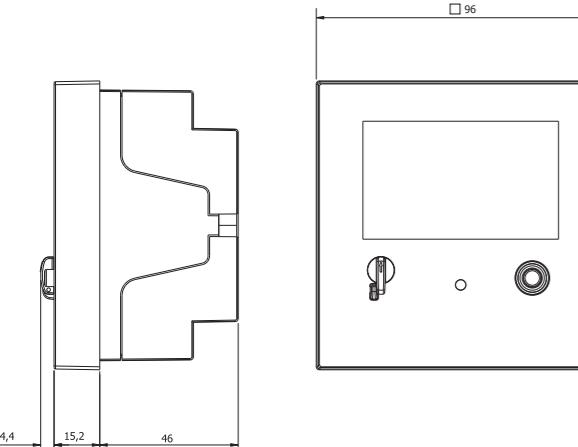

16 EnE t.rES: permite la puesta a cero de todos los contadores totales.

17 End: permite salir del modo de programación presionando el joystick en dirección 1 (ver fig. 1). Las direcciones 4 y 5 del joystick permiten ir de nuevo al menú principal.

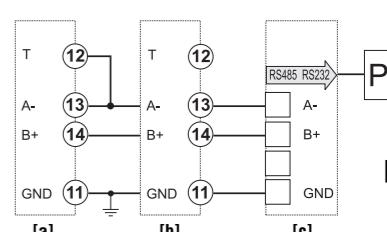

The menus availability depends on the "APPLiCAT" selection. La presenza dei menù è in funzione della selezione "APPLiCAT". La disponibilidad de los menús depende de la selección "APPLiCAT".

EM26 96 "Compact 3-phase Energy Analyzer"

[18]

ENGLISH

System type selection: 3P.n

[1]- 3-ph, 4-wire, unbalanced load, 3-CT connection.

[2]- 3-ph, 4-wire, unbalanced load, 3-CT and 3-VT connection.

[3]- 3-ph, 3-wire, unbalanced load, 3-CT connection.

[4]- 3-ph, 3-wire, unbalanced load, 3-CT and 2 VT connection.

[5]- 3-ph, 3-wire, unbalanced load, 2-CT connection (ARON)

[6]- 3-ph, 3-wire, unbalanced load, 2-CT and 2 VT-connection (ARON)

System type selection: 3P.1

[7]- 3-ph, 3-wire, balanced load, 1-CT connection (for the voltmeter input, a 2-wire connection can be used by connecting only terminals 15 and 17).

[8]- 3-ph, 3-wire, balanced load, 1-CT and 2-VT-connection

System type selection: 2P

[9]- 2-ph, 3-wire, 2-CT connection

[10]-2-ph, 3-wire, 2-CT and 2-VT connection

System type selection: 1P

[11]- 1-ph, 2-wire, 1-CT connection

[12]- 1-ph, 2-wire, 1-CT and 1 VT connection

Power supply

[13]- 100 to 230VAC/DC power supply ("H" option), F=250V [T] 100mA. 24 to 48VAC/DC power supply ("L" option), F=250V [T] 200mA.

Outputs

[14]- Relay outputs

[15]- Open collector output (GND reference)

[16]- Open collector output (VDC reference)

The value of the load resistance (Rc) must make the close-contact current be lower than 100mA; the VDC voltage must be lower than or equal to 30 VDC. VDC: Power supply voltage (external). Out: positive output contact (transistor type open collector). GND: output

contact connected to ground (transistor type open collector).

Digital inputs and serial port

[17]- Digital inputs plus serial communication port.

[18]- RS485 connection, 2 wires [a]- last instrument,

[b]- instrument 1...n, [c]- RS485/RS232 transducer. The termination of the serial port is to be carried out only on the last instrument of the network by connecting together terminals T and A.

"H"), F=250V [T] 100mA. Alimentazione da 48VCA/CC (opzione "L"), F=250V [T] 200mA.

Uscite

[14]- Uscite relè.

[15]- Uscita a collettore aperto (riferimento GND)

[16]- Uscita a collettore aperto (riferimento VDC)

La resistenza di carico (Rc) dev'essere calcolata in modo che la corrente a contatto chiuso sia inferiore a 100 mA; la tensione VDC dev'essere inferiore o uguale a 30V.

VDC: Tensione di alimentazione (esterna). Out: contatto di uscita positivo (collettore aperto tipo transistor). GND: contatto di uscita collegato a massa (collettore aperto tipo transistor).

Ingressi digitali e porta seriale

[17]- Ingressi digitali più porta comunicazione seriale.

[18]- Connessione RS485 a 2 fili [a]- ultimo strumento,

[b]- strumento 1...n, [c]- convertitore RS485/RS232. La terminalizzazione della porta seriale si esegue solo sull'ultimo strumento della rete collegando assieme il morsetto T e A-.

a trafo de intensidad (para la entrada de tensión se puede efectuar una conexión a 2 hilos conectando los terminales 15 y 17).

[8]- Trifásico, 3 hilos, carga equilibrada, conexión 1 trafo de intensidad y 2 trafos de tensión.

Selección del sistema: 2P

[9]- Bifásico, 3 hilos, conexión 2 trafos de intensidad.

[10]-Bifásico, 3 hilos, conexión 2 trafos de intensidad y 2 trafos de tensión.

Selección del sistema: 1P

[11]- Monofásico, 2 hilos, conexión 1 trafo de intensidad.

[12]- Monofásico, 2 hilos, conexión 1 trafo de intensidad y 1 trafo de tensión.

Alimentación

[13]- Alimentación de 100 a 230VCA/CC (opción "H"),

F=250V [T] 100mA. Alimentación de 24 a 48VCA/CC (opción "L"), F=250V [T] 200mA.

Salidas

[14]- Salidas relé

[15]- Salida colector abierto (referencia a negativo GND)

[16]- Salida colector abierto (referencia a positivo VDC)

El valor de la resistencia de la carga (Rc) debe hacer que la intensidad a contacto cerrado sea inferior a 100 mA; la tensión VCC debe ser menor o igual a 30 VCC. VDC: tensión de alimentación (externa). Out: contacto salida positivo (transistor de tipo colector abierto). GND: salida a negativo (transistor de tipo colector abierto).

Entradas digitales y puerto serie

[17]- Entradas digitales + Salida comunicación serie.

[18]- Conexión RS485 dos hilos [a]- último instrumento, [b]- instrumento 1...n, [c]- transductor RS485/RS232. La terminalización del puerto serie se lleva a cabo sólo en el último instrumento de la red conectando los terminales T y A-.

UL NOTES

"Max. Surrounding Air of 40°C". "Use 60 or 75°C copper (CU) conductor and wire size No. 24-12 AWG, stranded or solid".

"Terminal tightening torque of 4 Lb-In (0.5Nm)".

"Open Type Device".

Current measuring input terminals must be connected through a R/C Measuring transformer with one lead connected to Earth. Direct connection to the line voltage is not allowed.

SAFETY PRECAUTIONS

Read carefully the instruction manual. If the instrument is used in a manner not specified by the producer, the protection provided by the instrument may be impaired. **Maintenance:** make sure that the connections are correctly carried out in order to avoid any malfunctioning or damage to the instrument. To keep the instrument clean, use a slightly damp cloth; do not use any abrasives or solvents. We recommend to disconnect the instrument before cleaning it.

TECHNICAL SPECIFICATIONS

Input specification: Rated inputs: system type: 3. Current type: galvanic insulation by means of built-in CT's. Current range (by CT) AV5 and AV6: 1/5(10)A. Voltage by direct connection or VT/PT: AV5: 230/400VLL; AV6: 120/208VLL. **Accuracy** (Display + RS485) (@25°C ±5°C, R.H. ≤60%, 48 to 62Hz): AV5 model: In: 5A, Imax: 10A; Un: 160 to 480VLN (277 to 830VLL). AV6 model: In: 5A, Imax: 10A; Un: 40 to 144VLN (70 to 250VLL). Current (AV5, AV6 models): from 0.002In to 0.2In: ±(0.5% RDG +3DGT); Storage temperature: -30°C to +70°C (-22°F to 158°F) (R.H. < 90% non-condensing @ 40°C) according to EN62053-21 and EN62053-23. **Installation category:** Cat. III (IEC60664, EN60664). **Insulation (for 1 minute):** 4000VRMS between measuring inputs and power supply; 4000VRMS between power supply and RS485 digital outputs. **Dielectric strength:** 4000VRMS for 1 minute. **Noise rejection** CMRR 100 dB, 48 to 62 Hz. **EMC:** according to EN62052-11. Electrostatic discharges 15kV air discharge; Immunity to irradiated test with current: 10V/m from 80 to 2000MHz; Electromagnetic fields test without any current: 30V/m from 80 to 2000MHz; Burst on current and voltage measuring inputs circuit: 4kV. Immunity to conducted disturbances 10V/m from 150kHz to 80MHz. Surge on current and voltage measuring inputs circuit: 4kV; on "L" auxiliary power supply input: 1kV; Radio frequency suppression according to CISPR 22. **Standard compliance:** IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. **Metrológica:** EN62052-21, EN62053-23, EN50470-3, pulse output DIN43864, IEC62053-31. Approvals: CE, UL. **Connections:** screw-type, cable cross-section area: 7+1DGT or 8DGT; Exported: Total/Partial/Tariff: 6+1DGT or 7DGT (with "-" sign). Overload status: EEEE indication when the value being measured is exceeding the "Continuous inputs overload" (maximum measurement capacity). Max. and Min. indication: Max. instantaneous variables: 9999; energies: 9 999 999.9 or 99 999 999. Min. instantaneous variables: 0; energies 0.0 or 0. **LEDs:** red LED (Energy consumption), 0.001 kWh/kvarh by pulse if, CT ratio by VT ratio is ≤7: 0.01 kWh/kvarh by pulse if CT ratio x VT ratio is > 7.1 ≤70.0; 1 kWh/kvarh by pulse if CT ratio x VT ratio is > 70.1 ≤700.1; 1 kWh/kvarh by pulse if CT ratio x VT ratio is > 700.1. Max frequency: 16Hz according to EN62052-11. **Measurements:** method TRMS measurements of distorted wave forms. Coupling type by means of external CT's. **Crest factor:** ≤3 (15A max. peak). **Current Overloads:** continuous, 10A, @ 50Hz, for 500ms 200A, @ 50Hz. **Voltage Overloads:** continuous 1.2 Un. For 500ms 2 Un. **Input impedance:** 208VL-L (AV6) >1MΩ, 400VL-L (AV5) >1MΩ, 1/5(10)A (AV5-AV6) <0.3VA. **Frequency:** 45 to 65 Hz. **Joystick:** for variable selection: programming of the instrument working parameters and Wdmd max reset. **Digital outputs:** **pulse type:** number of outputs: up to 3, independent. Programmable from 0.001 to 10.00 pulses per kWh/kvarh per pulse. Type: outputs connectable to the energy meters (Wh/varh). Pulse duration: ≥100ms < 120msec (ON), ≥120ms (OFF), according to EN62052-31. **Alarm type:** number of outputs up to 3 independent. Alarm modes: up alarm, down alarm. Set-point adjustment From 0 to 100% of the display scale. Hysteresis: from 0 to full scale, on-time delay: 0 to 255s. Output status: selectable normally de-energized or normally energized. Min. response time: ≤ 700ms, filters excluded and set-point on-time delay: "0 s". **Remote control:** this selection allows the remote control of the digital output (from PC by means of serial communication port). **Note:** the 3 digital outputs can also work as a triple pulse output, triple alarm output, or in any other combination. **Static output:** physical outputs: max. 3, purpose: for pulse output, alarm output or remote control. Signal V_{ON}: 1.2VDC/ max. 100 mA, V_{OFF} : 30VDC max. Insulation: by means of optocouplers: 4000VRMS output to measuring inputs; 4000 VRMS output to power supply input. **Relay output:** physical outputs 2. Purpose: for alarm output, pulse output or remote control. Type: relay, SPST type: AC 1-5A @ 250VAC, DC 12-5A @ 24VDC, AC 15-1.5A @ 250VAC, DC 13-1.5A @ 24VDC. Insulation: 4000VRMS output to measuring input, 4000 VRMS output to power supply input. **RS485:** type multidrop, bidirectional (static and dynamic variables). Connections: 2-wire. Max. distance 1000m. Termination directly on the instrument. Addresses: 247, selectable by means of the front joystick. Protocol: MODBUS/JBUS (RTU). Data (bidirectional). Dynamic (reading only): System and phase variables; static (reading and writing): all the configuration parameters. Data format: 1 start bit 8 data bit, no parity, 1 stop bit. Baud-rate: 4800, 9600 bits/s. Driver input capability: 1/5 unit load, maximum 160 transceivers on the same bus. Insulation: by means of optocouplers: 4000VRMS output to measuring input; 4000VRMS output to power supply input. Note: By means of the RS485 serial communication port, it's possible to manage also the tariff change (only for APPLICAT C, F, G, H) in order to count energy by tariffs (T1, T2, T3, T4). This feature is available only on the models with "I3" option. None of these 3 digital inputs has to be set as "tar". **Digital input specifications:** number of inputs: 3. Input frequency: 20Hz max, duty cycle 50%. Prescaler adjustment: from 0.1 to 999,9 m3 or kWh/pulse. Contact measuring voltage: 5VDC +/- 5%. Contact measuring current: 10mA max. Input impedance: 680Ω. Contact resistance: ≤100Ω (closed contact), ≥500Ω (open contact). Working modes selectable: total and partial energy meters (kWh and kvarh) without digital inputs; total and partial energy meters (kWh and kvarh) managed by time periods (t1-t2), W dmd synchronisation (the synchronisation is made every time the tariff changes) and GAS (m³) or WATER (hot-cold m³) or remote heating (kWh) meters; total and partial energy meters (kWh and kvarh) managed by time periods (t1-t2), W dmd synchronisation (the synchronisation is made independently from the tariff selection) and GAS (m³) or WATER (hot-cold m³) or remote heating (kWh) meters; total energy (kWh, kvarh) and GAS, WATER (hot-cold m³) and remote heating meters (3 choices only). Note: the energy metering is only made by means of the analogue inputs. If the rEM function is selected, it's possible to read remotely the digital input status. Insulation: by means of optocouplers: 4000 VRMS digital inputs to measuring inputs; 4000 VRMS digital inputs to power supply input. **Software Functions:** **Password:** numeric code of max. 4 digits; 2 protection levels of the programming data: 1st level; password "0"; no protection; 2nd level: password from 1 to 9999: all data are protected. **System selection:** system 3-Ph.n: unbalanced load 3-phase (3 or 4 wires). System 3-Ph.1: balanced load, 3-phase (3-wire) one current and 3-phase to phase voltage measurements or 3-phase (4-wire) one current and 1-phase (Wh/varh). Durata dell'impulso ≥100ms < 120msec (ON), ≥120ms (OFF), secondo EN62052-31. **Uscita allarme:** Numero uscite fino a 3, indipendenti. Modalità degli allarmi: allarme di massima, allarme di minima. Regolazione soglia: da 0 a 100% della scala visualizzata. Isteresi: da 0 a fondo scala. Ritardo all'avvistamento da 0 a 255s. Stato dell'uscita: selezionabile normalmente eccitato o normalmente disaccenduto. Tempo minimo di risposta ≤700ms, filtri esclusi. Ritardo all'avvistamento: "0 s". **Controllo remoto:** questa selezione permette il comando dell'uscita digitale in modo remoto (da PC tramite comunicazione seriale). **Note:** le 3 uscite digitali possono anche funzionare come tripla

"EEEE". For MID compliant applications the maximum power being measured is 25 MW. **Filter:** operating range: 0 to 100% of the input display scale; Filtering coefficient: 1 to 32. Filter action: measurements, serial output (fundamental variables: V, A, W and their derived ones). **Displaying:** up to 3 variables per page, 8 different set of variables available, according to the application being selected. **Alarm highlight:** in case of alarm or the relevant function is enabled, the display changes the colour alternatively from white backlight to blue backlight and vice versa. **Reset:** by means of the front joystick: to keep the instrument clean, use a slightly damp cloth; do not use any abrasives or solvents. We recommend to disconnect the instrument before cleaning it.

Technical specifications: Rated inputs: system type: 3. Current type: galvanic insulation by means of built-in CT's. Current range (by CT) AV5 and AV6: 1/5(10)A. Voltage by direct connection or VT/PT: AV5: 230/400VLL; AV6: 120/208VLL. **Accuracy** (Display + RS485) (@25°C ±5°C, R.H. ≤60%, 48 to 62Hz): AV5 model: In: 5A, Imax: 10A; Un: 160 to 480VLN (277 to 830VLL). AV6 model: In: 5A, Imax: 10A; Un: 40 to 144VLN (70 to 250VLL). Current (AV5, AV6 models): from 0.002In to 0.2In: ±(0.5% RDG +3DGT); Storage temperature: -30°C to +70°C (-22°F to 158°F) (R.H. < 90% non-condensing @ 40°C) according to EN62053-21 and EN62053-23. **Operating temperature:** -25°C to +55°C (-13°F to 131°F) (R.H. from 0 to 90% non-condensing @ 40°C) according to EN62053-21 and EN62053-23. **Installation category:** Cat. III (IEC60664, EN60664). **Insulation (for 1 minute):** 4000VRMS between measuring inputs and power supply; 4000VRMS between power supply and RS485 digital outputs. **Dielectric strength:** 4000VRMS for 1 minute. **Noise rejection** CMRR 100 dB, 48 to 62 Hz. **EMC:** according to EN62052-11. Electrostatic discharges 15kV air discharge; Immunity to irradiated test with current: 10V/m from 80 to 2000MHz; Electromagnetic fields test without any current: 30V/m from 80 to 2000MHz; Burst on current and voltage measuring inputs circuit: 4kV. Immunity to conducted disturbances 10V/m from 150kHz to 80MHz. Surge on current and voltage measuring inputs circuit: 4kV; on "L" auxiliary power supply input: 1kV; Radio frequency suppression according to CISPR 22. **Standard compliance:** IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. **Metrológica:** EN62052-21, EN62053-23, EN50470-3, pulse output DIN43864, IEC62053-31. Approvals: CE, UL. **Connections:** screw-type, cable cross-section area: 7+1DGT or 8DGT; Exported: Total/Partial/Tariff: 6+1DGT or 7DGT (with "-" sign). Overload status: EEEE indication when the value being measured is exceeding the "Continuous inputs overload" (maximum measurement capacity). Max. and Min. indication: Max. instantaneous variables: 9999; energies: 9 999 999.9 or 99 999 999. Min. instantaneous variables: 0; energies 0.0 or 0. **LEDs:** red LED (Energy consumption), 0.001 kWh/kvarh by pulse if, CT ratio by VT ratio is ≤7: 0.01 kWh/kvarh by pulse if CT ratio x VT ratio is > 7.1 ≤70.0; 1 kWh/kvarh by pulse if CT ratio x VT ratio is > 70.1 ≤700.1; 1 kWh/kvarh by pulse if CT ratio x VT ratio is > 700.1. Max frequency: 16Hz according to EN62052-11. **Measurements:** method TRMS measurements of distorted wave forms. Coupling type by means of external CT's. **Crest factor:** ≤3 (15A max. peak). **Current Overloads:** continuous, 10A, @ 50Hz, for 500ms 200A, @ 50Hz. **Voltage Overloads:** continuous 1.2 Un. For 500ms 2 Un. **Input impedance:** 208VL-L (AV6) >1MΩ, 1/5(10)A (AV5-AV6) <0.3VA. **Frequency:** 45 to 65 Hz. **Joystick:** for variable selection: programming of the instrument working parameters and Wdmd max reset. **Digital outputs:** **pulse type:** number of outputs: up to 3, independent. Programmable from 0.001 to 10.00 pulses per kWh/kvarh per pulse. Type: outputs connectable to the energy meters (Wh/varh). Pulse duration: ≥100ms < 120msec (ON), ≥120ms (OFF), according to EN62052-31. **Alarm type:** number of outputs up to 3 independent. Alarm modes: up alarm, down alarm. Set-point adjustment From 0 to 100% of the display scale. Hysteresis: from 0 to full scale, on-time delay: 0 to 255s. Output status: selectable normally de-energized or normally energized. Min. response time: ≤ 700ms, filters excluded and set-point on-time delay: "0 s". **Remote control:** this selection allows the remote control of the digital output (from PC by means of serial communication port). **Note:** the 3 digital outputs can also work as a triple pulse output, triple alarm output, or in any other combination. **Static output:** physical outputs: max. 3, purpose: for pulse output, alarm output or remote control. Signal V_{ON}: 1.2VDC/ max. 100 mA, V_{OFF} : 30VDC max. Insulation: by means of optocouplers: 4000VRMS output to measuring inputs; 4000 VRMS output to power supply input. **Relay output:** physical outputs 2. Purpose: for alarm output, pulse output or remote control. Type: relay, SPST type: AC 1-5A @ 250VAC, DC 12-5A @ 24VDC, AC 15-1.5A @ 250VAC, DC 13-1.5A @ 24VDC. Insulation: 4000VRMS output to measuring input, 4000 VRMS output to power supply input. **RS485:** type multidrop, bidirectional (static and dynamic variables). Connections: 2-wire. Max. distance 1000m. Termination directly on the instrument. Addresses: 247, selectable by means of the front joystick. Protocol: MODBUS/JBUS (RTU). Data (bidirectional). Dynamic (reading only): System and phase variables; static (reading and writing): all the configuration parameters. Data format: 1 start bit 8 data bit, no parity, 1 stop bit.
