CARLO GAVAZZI   WM30-96 Smart Power Analyzer
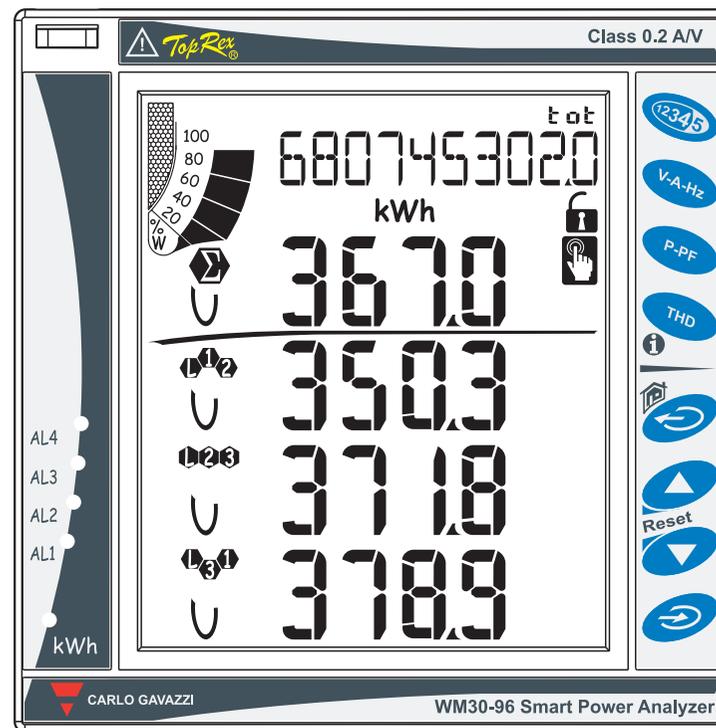

Control
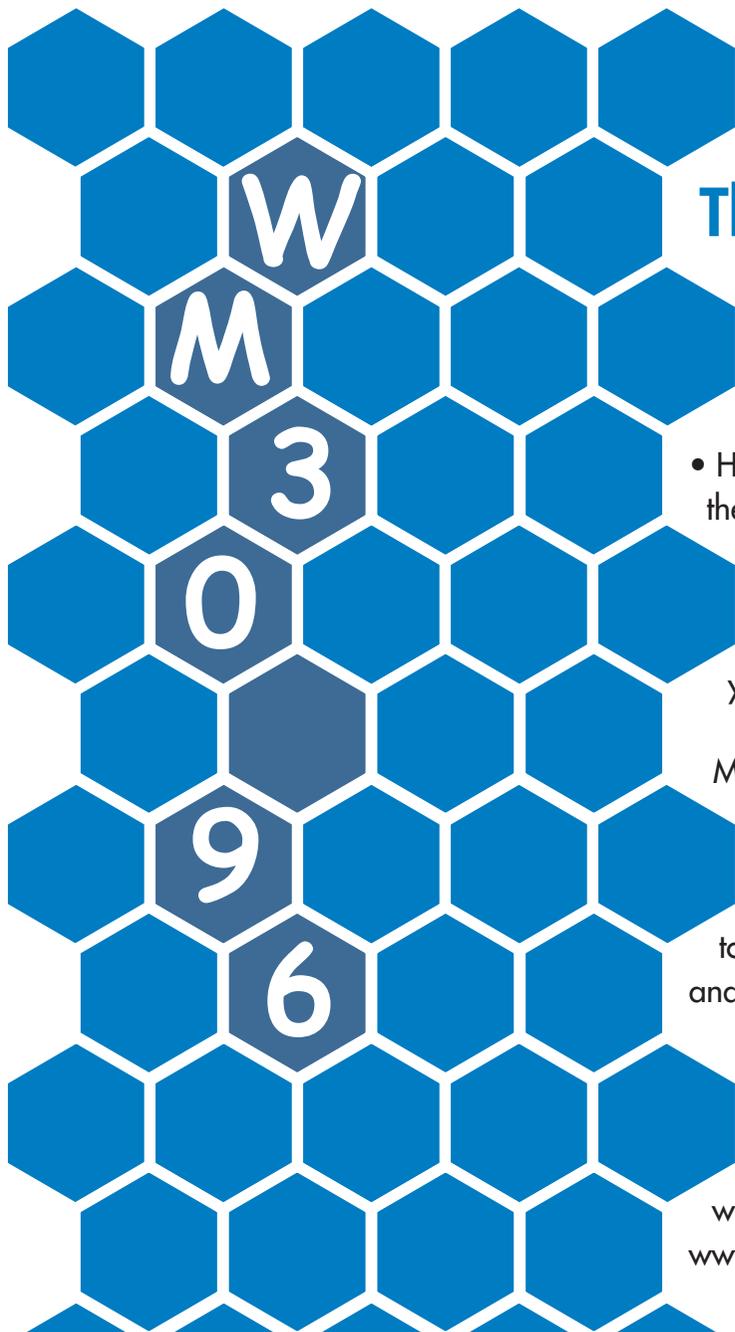

# Thank you for choosing our products

WM30 96:
- High accuracy (class 0.2 A/V);
- High calculation performances for a fast analysis of the signal (FFT up to the 32nd harmonics);
- high connection capabilities.

WM30-96 is the state-of-the-art tecnological answer to your needs of power quality analysis.

Moreover, you can count on a ISO9001/VISION 2000 certified company structure, an experience of many years and a wide-spread presence both in Europe and all over the world. All this in order to guarantee the customer with a top-quality service and the best products.

Welcome in Carlo Gavazzi and our compliments for your choice. You can evaluate the complete range of our products on the CARLO GAVAZZI web-site:

www.gavazzi-automation.com

Class 0.2 A/V

WM30-96 Smart Power Analyzer
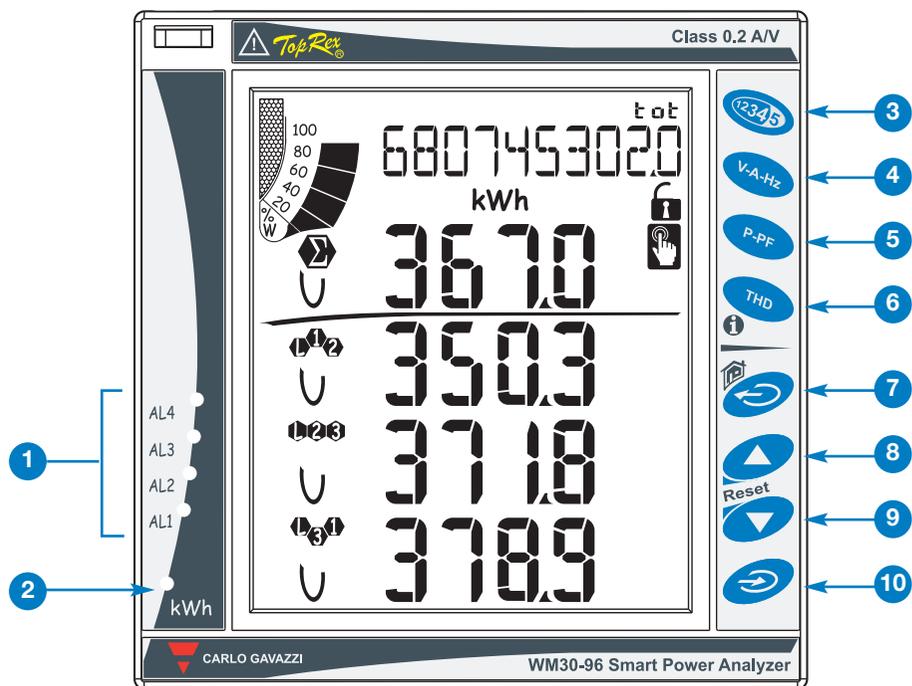

DESCRIPTION OF THE INSTRUMENT

1 Active virtual alarms warners.

2 Current energy drain indicator (kWh) by means of flashing, proportional to the measured energy (the higher the flashing frequency, the higher the energy drained. Max. frequency 16Hz pursuant to standard EN5047-1).

The keyboard is divided into two areas, the top area is dedicated to the measurements with direct access to specific visualization screens.

3 Visualization of the counters screens: each pressure of the button corresponds to the visualization of a screen with counters related to different energies (see the table with the measurement screens below).

4 Visualization of the current voltage and frequency (see the table with the measurement screens below).

5 Visualization of the instant cosφ and powers (see the table with the measurement screens below).

6 Visualization of the harmonics (see the table with the measurement screens below).

The keyboard in the bottom area is especially dedicated to instrument programming.

7 Exits the submenus, exits programming.

8 "Up" button, enables to browse the menus and to increase the values to be set.

9 "Down" button, enables to browse the menus and to decrease the values to be set.

10 Access to the programming menu: **hold pressed for at least 2 seconds to access the programming menu.**

In measurement mode, buttons 8 and 9 enable to display the MAX and dmd values of the displayed variables.

The buttons are enhanced touch buttons. To check their actual engagement, a specific icon on the display turns on each time a button is pressed.

We recommend using your forefinger to activate the touch buttons.

ADDITIONAL FUNCTIONS OF THE BUTTONS

The buttons featuring a double icon have two functions, to access the secondary function, hold pressed for a long time the button corresponding to the desired secondary function.

ⓘ Access to the instrument information screens: reference standards, firmware version, year of manufacturing.

🏠 "Home" button: from any measurement screen, from any menu, returns to the main measurement screen (customizable by the user). **If you are in the programming menu, any data entered is lost.**

Reset Holding pressed the button 8, you access the reset of the MAX of the displayed variables.
Holding pressed button 9, you access the reset of the dmd's of the displayed variables.
The reset must be confirmed by button 10.

ICONS OF THE DISPLAY

| 10 | 11 | 12 | 13 | 14 |

ALARM SETPOINT	
Set ▲	Set ▼
Up alarm.	Down alarm.

DESCRIPTION OF THE DISPLAY

1 Graphic bar which displays the active and the apparent power drained with relation to the installed power.

2 Indications of inductive phase displacement L, -L, or capacitive phase displacement C, -C.

3 Indication of the measurement phase-neutral L1 or phase-phase L12.

4 Indication of the measurement phase-neutral L2 or phase-phase L23 or of the asymmetry phase-phase VLL.

5 Indication of the measurement phase-neutral L3 or phase-phase L31 or of the asymmetry phase-neutral VLn.

6 Indication of the engineering unit and of the multiplier: k, M, V, W, A, var (VAr), PF (Pf), Hz, An.

7 ALR: the alarm display function is active. PROG: the programming function is active.

8 Area dedicated to the visualization of counters, text messages, date and time (format: dd.mm.yy/hh:mm). Energy counters (see table on the following screen).

9 Indication of: dmd, THD% or Max.

10 Indicates that all the instant values displayed are system values.

11 Phase sequence error alarm.

12 Instrument programming enabled.

13 Instrument programming disabled.

**14** Data transmission (TX) and reception (RX), via network communication, in progress.
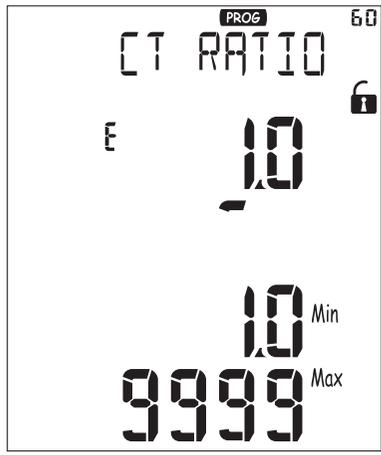

Notes: the display is backlighted with lighting time programmable from 0 minutes (always on) to 255 minutes.

HOW TO SET THE VALUES

With WM30 the values setting is even more simple, it is possible to increase or decrease every single digit, it is possible to easily obtain the wished value or change directly from one multiplier to another one.
Example: use of the menu relevant to the current ratio.

01 During the programming phase the instrument provides useful information:

a recognition of the programming mode;

b identifier number of the menu (see also the programming flow chart);

c edit, identification of the line subject to set;

d cursor that identifies the digit subject to set;

e maximum and minimum limit of selectable variable.

02 Use the keys **6** to increase and decrease the digit detected by the cursor **(d)**. To set another digit move the cursor to match the wished digit using the key **4**, every key press corresponds to a left shifting of the cursor **(d)**.

03 When the last digit on the left is matched by the cursor **(d)**, a further press of the key **4** allows to change the decimal point and the multiplier **(f)** (k o M), the blinking "dP" (decimal point) text **(g)** identifies that the instrument is able to do this function.
To modify the decimal point position and the multiplier use the keys **6** to have the wished value.

To confirm the set value press the key **7**.
To cancel the operation in progress and come back to the starting condition press the key **5**.
To cancel the operation in progress and come back to the measuring "Home" page, press and keep pressing the key **5** at least 2 seconds.

Selection	Application	Note
A	Cost allocation	Imported energy metering
B	Cost control	Imported and partial energy metering
C	Complex cost allocation	Imported/exported energy (total and partial)
D	Solar	Imported and exported energy metering with some basic power analyzer function
E	Complex cost and power analysis	Imported/exported energy (total and partial) and power analysis
F	Cost and power quality analysis	Imported energy and power quality analysis
G	Advanced energy and power analysis for power generation	Complete energy metering and power quality analysis

NOTE

WM30-96 is provided with the "Easy-prog" function which enables a simple, quick, clear and immediate visualization of the instrument measurements, making available only specific variables depending on the application of the instrument. The available applications are described above.
To leverage all the capacities of the instrument, select the application G which enables a complete and detailed analysis of the electric energy.

Key-pad

Push for at least 2 s

NOTE

10 CHANGE PAS: this function allows the user to modify the PASS value with a new value (from 0 to 9999).

20 BACKLIGHT: backlight time from 0 (always on) to 255 minutes.

30 MODULES: the WM30 96 supports either automatic (A) or manual (M) acknowledgment of the installed modules depending on the kind of module.

40 APPLICAT.: this function which enables a simple, quick, clear and immediate visualization of the instrument measurements, making available only specific variables (page 4/5) depending on the application of the instrument. **50 SYSTEM:** this function allows the user to select the type of electrical system. **60 CT RATIO:** this function allows the user to select the value of the CT ratio (primary/secondary ratio of the current transformer being used). Example: if the CT primary (current transformer) has a current of 300A and the secondary a current of 5A, the CT ratio corresponds to 60 (obtained using the following calculation: 300/5).

70 PT RATIO: this function allows you to select the value of the VT-PT ratio (primary/secondary ratio of the voltage transformer being used). Example:

if the primary of the connected VT (voltage transformer/potential transformer) is 20kV and the secondary is 100V, then the VT-PT ratio corresponds to 200 (obtained carrying out the following calculation: 20000/100).

80 DMD: This function allows the user to select the calculation method of the DMD/AVG value of the selected variable. 81 TYPE: select the type of calculation mode to be used for the DMD/AVG calculation FIXED: if, for example, a time interval of 15 minutes has been selected, the instrument will calculate the AVG/DMD value of the measured variable and updates its value every 15 minutes, after that resets and starts a new calculation. SLIDE: if for example a time interval of 15 minutes has been selected, the instrument calculates the AVG/DMD value and updates its value at the beginning after the first 15 values and then after every minute, thus generating a window whose width is of 15 minutes and that moves forward every minute. 82 TIME: select the time interval for the DMD/AVG calculation 83 SYNC: select the synchronization mode, that is the method that controls the calculation method of the average/demand according to the
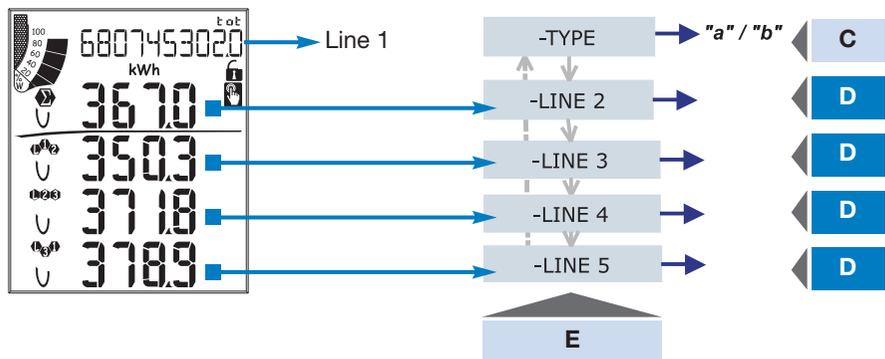

selected time.

90 SET POWER: This menu allows you to set a power value (installed power) that, in the measuring phase, will represent 100% of the graph indicator.

100 HOME PAGE: This function allows the user to select the variables to be displayed on first page (home page). 101 TYPE: A, you can select the variable for each row. B, you can select a preset combination of variables (see relevant chapter to next page). 106 PAGE: select a preset series of variables (see relevant chapter to next page).

110 FILTER: with the digital filter it's possible to stabilize the measurements which are too instable when displaying the relevant values. 111 FILTER S: set the operating range (span) of the digital filter. The value is expressed as a % (filter to 0.0 means filter excluded). 112 FILTER CO: set the filtering coefficient of the instantaneous measures. By increasing the value, also the stability and the settling time of the measures are increased.

Some specific menus display only if the relevant modules are installed.

NOTE

210 AN OUT 1: this submenu allows the programming of the analogue outputs (0-20mA, 0-10V). **211** VARIABLES: select the variable to be retransmitted by means of the analog output. **212** MIN INPUT: minimum value of the variable input range to which the "MIN OUTPUT" value, retransmitted by the analogue output, will be linked. **213** MAX INPUT: maximum value of the variable input range to which the "MAX OUTPUT" value, retransmitted by the analogue output, will be linked. **214** MIN OUTPUT: set the value expressed as % of the output range (0-20mA, 0-10V) to be linked to the minimum measured value. **215** MAX OUTPUT: select the value expressed as % of the output range (0-20mA, 0-10V) to be linked to the maximum measured value.
**230 METERS:** reset the ENERGY METERS choosing among: TOTAL, PARTIAL: resets all energy meters, both total and partial. TOTAL +: resets the total meters of imported energy. TOTAL -: resets the total meters of exported energy. PARTIAL +: resets the partial meters of imported energy.

PARTIAL -: resets the partial meters of exported energy.
240 RESET: carry out the reset of the MAX or dmd stored values.
250 CLOCK, 241 FORMAT: UE, set the European time format as 24h (00:00) or the USA set the American time format as 12h (12:00 AM/PM). 252 YEAR: set the current year. 253 MONTH: set the current month. 254 DAY: set the current day. 255 HOUR: set the current hour. 256 minute: set the current minute. 257 SECOND: set the current second.

Some specific menus display only if the relevant modules are installed.

A | Digital fluctuation — No filter action — t (s)
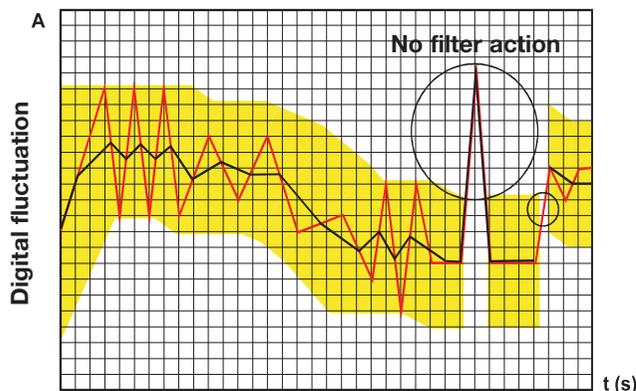

WHAT IS THE ACTION OF THE DIGITAL FILTER PARAMETERS ON THE MEASURE?

The first filter parameter is **FILTER S** and defines the operating range of the filter. This operating range is represented as a yellow band in figure on left side (each small square is one digit). Until the measured value (red curve in figure) is within this band, the filter is active; as soon as the value is external, the filter is deactivated and a new band will be active around the new value.
The range of the fluctuation (in digit) is a good starting value for such parameters.
The suggestion to set this parameter is to look at the size of the fluctuation (in digit) and use this value.

The second parameter is **FILTER CO** and represents the filtering coefficient. The higher is **FILTER CO**, the smoother is the curve of the displayed values (black in figure). There is not a theoretical rule to define this parameter, it is to be set on the field: however a rough suggestion is to start with the same value of the **FILTER S** coefficient and then increase it until the desired stability is reached.

The digital filter affects the values retransmitted both via serial communication and analogue output.

DIGITAL FILTER PROGRAMMING EXAMPLES

Example 1

How to stabilize the value of the VL-N variable displayed on the display, fluctuating from 222V and 228V.
The parameters of the digital filter have to be programmed as follows:
FILTER S: the variable has fluctuations within the mean value whose amplitude is equal to ±0,75% of the full scale rated value of the variable itself (obtained by the following calculation: (228-222)/ 2= ±3V, then ±3*100/400V= ±0,75% where 400V is the phase-neutral rated value of an AV5 input). The "range" parameter, representing the action range of the digital filter, is to be programmed to a value which must be slightly higher than the percentage amplitude of the fluctuation: ex. 1.0%.
FILTER CO: if the new value measured by the instrument is within the action range of the filter, the new displayed value is obtained by adding algebrically the previous value to the variation divided by the filtering coefficient. As a consequence, a value higher than this coefficient implies a longer settling time and therefore a better stability. You generally obtain the best result by setting the filtering coefficient to a value equal to at least 10 times the range parameter value.
In the following example: 1,0*10=10, the stability of the filtering coefficient can be improved by increasing the filtering coefficient, the allowed values are included within 1 and 255.

Example 2

How to stabilize the value of the displayed System Active Power (WΣ), fluctuating between 300kW and 320kW (the load is connected to the instrument by means of a 300/5A CT and a direct measure of the voltage).
The parameters of the digital filter must be programmed as follows:
FILTER S: the variable has fluctuations within the mean value whose amplitude is equal to ±2,78% of the full scale rated value of this variable. This value is obtained by the following calculation: (320-300)/ 2= ±10kW, then ±10*100/360kW= ±2,78%, where 360kW is the rated value of the System Active Power of an AV5 input, at the above mentioned CT and VT ratios and obtained by means of the following formula: "VLN * VT * IN * CT * 3" where VLN = rated input voltage (400V for the AV5 input), VT= primary/secondary ratio of the voltage transformer being used, IN = rated current (5A for the AV5 type input), CT = primary/secondary ratio of the voltage transformer being used (in this example "400*1*5*60*3=360kW). The RANGE parameter, representing the digital filtering coefficient action range, is to be programmed to a value which must be slightly higher than the percentage of the fluctuation: eg. 3.0%.
FILTER CO: if the new value acquired by the instrument is within the filtering action range, the new displayed value is obtained by adding algebrically the previous value to the variation divided by the filtering coefficient. As a consequence, a value higher than this coefficient implies an higher settling time and therefore a better stability. Generally speaking the best result is obtained setting the filtering coefficient to a value equal to at least 10 times the value of the range parameters. In the example: 3.0*10=30. In order to improve the stability you can increase the filtering coefficient, the admitted values are included within 1 and 255.

Example 3.

It's necessary to stabilize the value of the displayed variable AL 1 (phase current 1), fluctuating within 470V and 486V.
To be able to manage the alarm function and activation and deactivation of the relay, this value is not to be subject to continuous fluctuations. In this example we have considered using a 500/5A CT. The parameters of the digital filter is to be programmed as follows:
FILTER S: the variable has fluctuations within the mean value whose amplitude is equal to ±1,60% of the full scale rated value of this variable (obtained by means of the calculation: (486-470)/ 2= ±8A, then ±8*100/500A= ±1,60% where 500A is the value referred to the primary of the transformer being used). The "range" parameter, which represents the action range of the digital filter, is to be programmed to a value slightly higher than the pourcentage amplitude of the fluctuation: for example 2.0%.
FILTER CO: if the new value acquired by the instrument is within the filtering action range, the new displayed value is calculated algebrically adding to the previous value the variation divided by the filtering coefficient. As a consequence, a higher value of this coefficient implies a higher settling time and therefore a better stability. Generally speaking, the best result is obtained setting the filtering coefficient at a value equal to at least 10 times the value of the range parameter. In the example: 2.0*10=20. To improve the stability you can increase the filtering coefficient, the admitted values are within 1 and 255.

PROGRAMMING EXAMPLES OF THE ANALOGUE OUTPUTS

Power retransmission by means of a 0-20mA analogue output.

It's necessary to measure a consumed power up to 100kW and retransmit this value by means of a signal from 4 to 20 mA: the module to be used is MOV2 (2x from 0 to 20mA), the instrument is to be programmed as follows:

VARIABLE: WΣ (system active power).
MIN OUT: 20.0% means 4 mA. The calculation to be carried out is the following: (100*minimum output) / fullscale output =100*4mA/ 20mA=20%.
MAX OUT: 100.0% means 20mA. The calculation to be carried out is: (100*maximum output) / fullscale output = 100*20mA/20mA= 100.
MIN INPUT: 0,0k; the multiple k,M,G can be selected on the instrument according to the chosen VT and CT values.
MAX INPUT: 100.0k; the k, M, G multiples can be selected on the instrument according to the selected VT and CT values.

Retransmission of the POWER FACTOR (PF) by means of the 0-20mA analog output.

It's necessary to retransmit the whole range of the allowed values for the PF with a signal from 0 to 20mA. Particular attention must be paid to the value of the PF variable which may vary from C0,001 and L0,000 (for each phase): these values will be retransmitted and will then correspond to 0 and 20 mA. When the PF will have a value equal to 1, being in the middle between C0,001 and L0,000, the value of the output will correspond to the middle of the scale, that is 10mA. As a consequence, the instrument will have to be programmed as follows:

VARIABLE: PF L1 (or L2 or L3 or PFΣ).
MIN OUT: 0,0%.
MAX OUT: 100,0%.
MIN INPUT: C0,001 (the C symbol shows a CAPACITIVE value).
MAX INPUT: L0,001 (the L symbol shows an INDUCTIVE value). L0,001 has been chosen as minimum value to be set in order to avoid any undesirable swifting of the repeated outputs.

EXAMPLE OF ALARM PARAMETERS PROGRAMMING
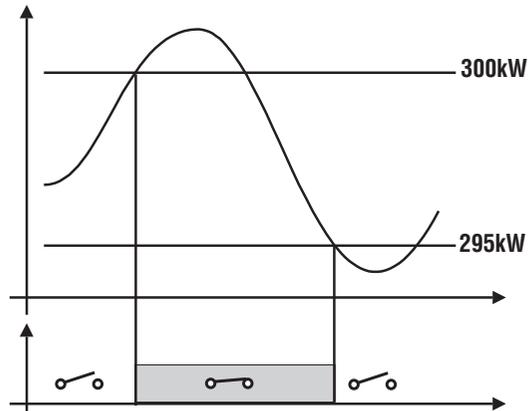

It is required the disconnection of a load when a set value of absorbed power occurs. For example when 300kW are exceeded, the alarm occurs and the set load is disconnected.
An "UP" alarm is selected, below you'll find the recommended programming:

ENABLE: YES
VARIABLES: W system (WΣ)
SET POINT 1: 300kW
SET POINT 2: 295kW
ON DELAY: set the desired number of seconds: "5 seconds".

minimal## ENGLISH

Read carefully the instruction manual. If the instrument is used in a manner not specified by the producer, the protection provided by the instrument may be impaired. **Maintenance:** make sure that the connections are correctly carried out in order to avoid any malfunctioning or damage to the instrument. To keep the instrument clean, use a slightly damp cloth; do not use any abrasives or solvents. We recommend to disconnect the instrument before cleaning it.

WARNING: to make sure that the screw tightening torque is 0.5Nm. ALL THE MOUNTING AND DISASSEMBLY OPERATIONS OF THE INSTRUMENT AND MODULES HAVE TO OCCUR WHEN POWER SUPPLY AND THE LOADS ARE NOT CONNECTED.

Preliminary operations: if necessary remove the protection cover of the contacts **[A]**, using a properly screwdriver.

Lock the programming and LED of power supply on: to lock the acces to the programming of the instrument turning (clockwise) the rotary switch **[B]** to position 7. To unlock the programming come-back the rotary switch to the position 1. The green LED **[C]** on warns that the instrument is power suplayed.

The instrument and modules sealing: to lock the modules turning (clockwise) the properly fixing elements on the corners **[E]**, using a properly screwdriver **[F]**. To seal the instrument use the dedicated covers and holes **[D]**.
Bracket tightening torque: 0,4 Nm max **[G]**.

ITALIANO

Leggere attentamente il manuale di istruzioni. Qualora l'apparecchio venisse adoperato in un modo non specificato dal costruttore, la protezione prevista dall'apparecchio potrebbe essere compromessa.
Manutenzione: Per mantenere pulito lo strumento usare un panno inumidito; non usare abrasivi o solventi. Si consiglia di scollegare lo strumento prima di eseguire la pulizia.

ATTENZIONE: assicurarsi che la coppia di serraggio applicata alle viti dei morsetti sia di: 0,5Nm. TUTTE LE OPERAZIONI DI MONTAGGIO E SMONTAGGIO DELLO STRUMENTO E DEI MODULI VANNO ESEGUITE CON ALIMENTAZIONE E CARICO SCOLLEGATI.

Operazione preliminare: smontare, se necessario, la finestra di protezione dei contatti **[A]**, utilizzando un apposito cacciavite a taglio.

Blocco della programmazione e LED di presenza alimentazione: per bloccare la programmazione dello strumento agire (ruotandolo in senso orario) sul commutatore rotante **[B]** portandolo nella posizione 7, per sbloccare la programmazione portarlo nella posizione 1. Il LED verde acceso **[C]** avvisa che lo strumento è alimentato.

Sigillatura dei moduli e dello strumento: per bloccare i moduli agire (ruotandoli in senso orario) sugli appositi elementi di fissaggio posti agli angoli dei moduli stessi **[E]**, utilizzando un adeguato cacciavite a taglio **[F]**. Il sigillo va apposto utilizzando i fori e i copri morsetti dedicati **[D]**. Coppia di serraggio delle staffe: 0,4 Nm max **[G]**.

■ **COLLEGAMENTI ELETTRICI**
[1] 3 fasi, 2 fili, carico equilibrato, connessione con 1 TA
[2] 3 fasi, 2 fili, carico equilibrato, connessione con 1TA e 1 TV
[3] 3 fasi, 4 fili, carico squilibrato, connessione con 3 TA
[4] 3 fasi, 4 fili, carico squilibrato, connessione con 3 TA e 3 TV
[5] 3 fasi, 3 fili, carico squilibrato, connessione con 3 TA
[6] 3 fasi, 3 fili, carico squilibrato, connessione con 3 TA e 2 TV
[7] 3 fasi, 3 fili, carico squilibrato, connessione con 1 TA
[8] 3 fasi, 3 fili, carico squilibrato, connessione con 2 TV (ARON)
[9] 3 fasi, 3 fili, carico equilibrato, connessione con 1 TA e 2 TV
[10] 2 fasi, 3 fili, connessioni con 2 TA
[11] 2 fasi, 3 fili, connessioni con 2 TA e 2 VT
[12] 1 fase, 2 fili, connessione con 1TA
[13] 1 fase, 2 fili, connessione con 1 TA e 1 TV
[14] 3 fasi, 3 fili, carico squilibrato, connessione con 2 TA e 2 TV (ARON)
[15] Alimentazione da 90 a 260VCA/CC. F=250V [T] 630mA.
Alimentazione da 18 a 60VCA/CC. F=250V [T] 3.15A.

DEUTSCH

Die Betriebsanleitung aufmerksam lesen. Sollte das Gerät nicht gemäss der Herstellerangaben verwendet werden, könnte der vom Gerät vorgesehene Schutz beeinträchtigt werden. **Wartung:** Das Gerät mit einem feuchten Tuch reinigen; keine Scheuer- oder Lösemittel verwenden. Das Gerät vor der Reinigung ausschalten.

ACHTUNG: Darauf achten, dass das Anzugsmoment der Klemmenschrauben 0,5Nm beträgt. SOWOHL BEI DER MONTAGE, ALS AUCH BEIM AUSBAU DES GERÄTES UND DER MODULE MÜSSEN STROMVERSORGUNG UND STROMLAST STETS VORHER ABGETRENNT WERDEN.

Vorbereitung: Gegebenenfalls das Schutzfenster der Kontakte **[A]** mit einem Schlitzschraubenzieher entfernen.

Programmierungssperre und LED Stromversorgung vorhanden: Um die Programmierung des Gerätes zu sperren, den Drehschalter **[B]** im Uhrzeigersinn auf Position 7 drehen, für die erneute Freigabe auf Position 1. Das Leuchten der grünen LED **[C]** zeigt an, dass das Gerät mit Strom versorgt wird.

Versiegelung der Module und des Geräts: Die Befestigung der Module erfolgt (durch Drehen derselben im Uhrzeigersinn) über die an den Ecken vorgesehenen Befestigungselemente **[E]**, mit Hilfe eines passenden Schlitzschraubenziehers **[F]**. Das Siegel wird über die hierfür vorgesehenen Löcher und Klemmendeckel **[D]** angebracht. Befestigungsbügel Anzugsmoment: max 0,4 Nm **[G]**.

[15] Stromversorgung von 90 bis 260 VAC/DC. F=250V [T] 630mA.
Stromversorgung von 18 bis 60 VAC/DC. F=250V [T] 3.15A.

FRANÇAIS

Lire attentivement le manuel de l'utilisateur. Si l'appareil est utilisé dans des conditions différentes de celles spécifiées par le fabricant, le niveau de protection prévu par l'instrument peut être compromis.
Entretien: Pour nettoyer l'instrument, utiliser un chiffon humide; ne pas utiliser d'abrasifs ou de solvants. Il faut déconnecter le dispositif avant de procéder au nettoyage.

ATTENTION: s'assurer que le couple de serrage appliqué aux vis des bornes soit de: 0,5Nm. POUR TOUTES LES OPÉRATIONS DE MONTAGE ET DÉMONTAGE DE L'INSTRUMENT ET DES MODULES IL FAUT QUE L'ALIMENTATION ET LA CHARGE SOIENT DÉBRANCHÉES.

Opération préliminaire: démonter, si nécessaire, la fenêtre de protection des contacts **[A]**, en utilisant un tournevis plat approprié.

Blocage de la programmation et LED pour la présence d'alimentation: pour bloquer la programmation de l'instrument, agir (en le tournant dans le sens des aiguilles d'une montre) sur le commutateur rotatif **[B]** en le mettant sur la position 7, pour débloquer la programmation, le mettre sur la position 1. Le LED vert allumé **[C]** signale que l'instrument est alimenté.

Sceller les modules et l'instrument: pour bloquer les modules, agir (en les tournant dans le sens des aiguilles d'une montre) sur les éléments de fixation prévus à cet effet, situés aux angles des modules mêmes **[E]**, en utilisant un tournevis plat adéquat **[F]**. Le sceau doit être posé en utilisant les trous et les couvre-bornes prévus pour à cet effet **[D]**. Couple de serrage des vis de l'étrier de maintien: 0,4 Nm max **[G]**.

[15] Alimentation de 90 à 260VCA/CC. F=250V [T] 630mA.
Alimentation de 18 à 60VCA/CC. F=250V [T] 3.15A.
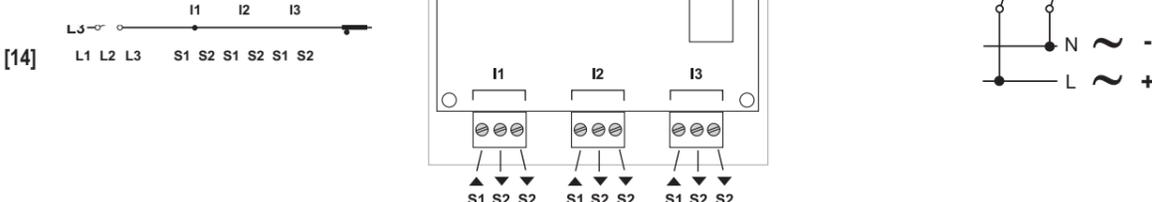

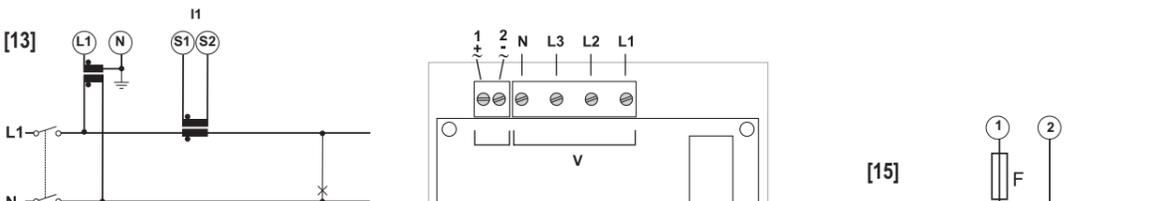

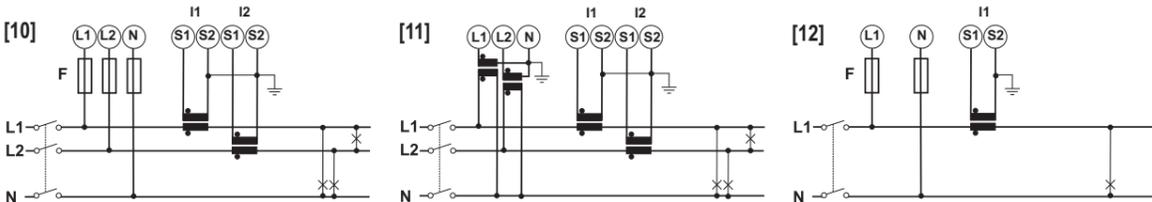

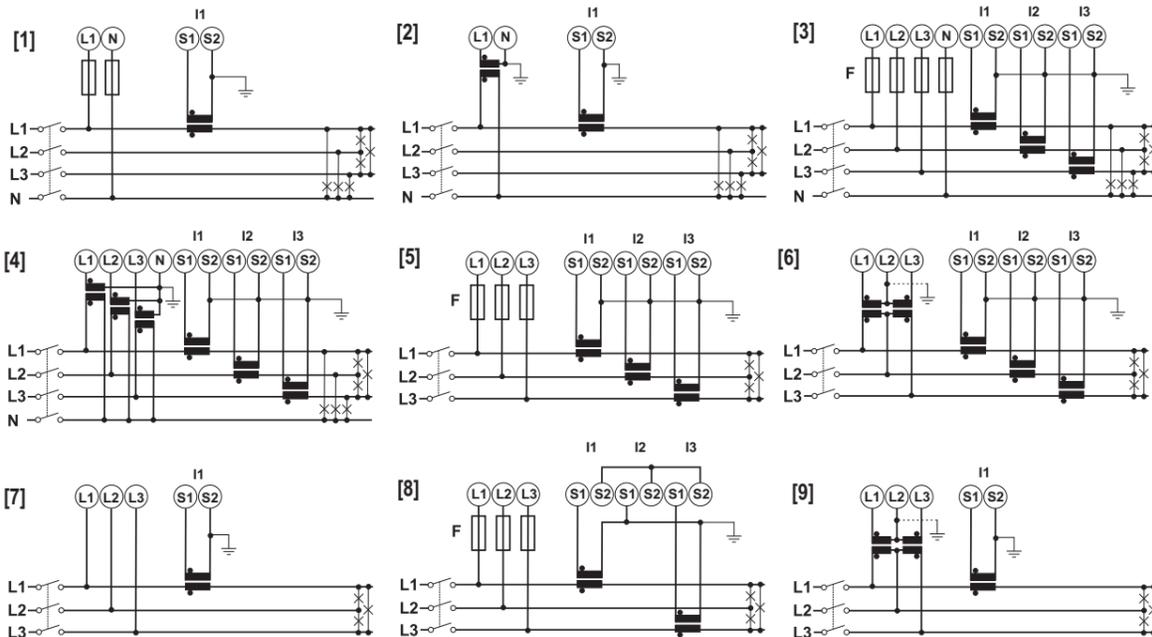

ESPAÑOL

Lea atentamente el manual de instrucciones. Si el instrumento se usa de modo distinto al indicado por el fabricante, la protección de seguridad ofrecida por el instrumento podrá resultar dañada.
Mantenimiento: para limpiar el equipo utilizar siempre un trapo ligeramente humedecido, nunca productos abrasivos o disolventes. Se recomienda desconectar el instrumento antes de limpiarlo.

ATENCIÓN: asegúrese de que el par de apriete aplicado a los tornillos sea de: 0,5Nm. TODAS LAS OPERACIONES DE MONTAJE Y DESMONTAJE DEL INSTRUMENTO Y DE LOS MÓDULOS DEBE REALIZARSE CON LA ALIMENTACIÓN Y LA CARGA DESCONECTADAS.

Operación preliminar: desmonte, si lo necesita, la ventana de protección de los contactos **[A]**, utilizando su propio destornillador de punta plana.

Bloqueo de la programación y LED de alimentación ON: para bloquear la programación del instrumento gire en el sentido de las agujas del reloj el conmutador giratorio **[B]** llevándolo a la posición 7, para desbloquear la programación llévelo a la posición 1. El LED verde encendido **[C]** indica que el instrumento está alimentado.

Sellado de los módulos y del instrumento: para bloquear los módulos gire en el sentido de las agujas del reloj los específicos elementos de fijación de los extremos de los módulos **[E]**, utilizando un adecuado destornillador de punta plana **[F]**. Para sellar el equipo use las cubiertas y orificios específicos **[D]**. Par de apriete del soporte: 0,4 Nm máx **[G]**.

Partial energy meters +kWh, +kvarh, -kWh, -kvarh. **Analysis principle** FFT. **Harmonic measurement.** Current up to the 32nd harmonic. Voltage up to the 32nd harmonic. **Type of harmonics** THD (VL1 and VL1-N). The same for the other phases: L2, L3. THD (AL1). The same for the other phases: L2, L3. **System:** the harmonic distortion can be measured in 3-wire or 4-wire systems. Tw: 0.02 sec@50Hz without filter. **Power supply** H: 100-240 +/-10% (90 to 255) VDC/AC (50/60 Hz); L: 24-48 +/-15% (20 to 55) VDC/AC (50/60 Hz). Power consumption AC: 6 VA; DC: 3.5 W. **Operating temperature** -25°C to +55°C (-13°F to 131°F) (R.H. from 0 to 90% non-condensing @ 40°C) according to EN62053-21, EN50470-1 and EN62053-23. **Storage temperature** -30°C to +70°C (-22°F to 158°F) (R.H. < 90% non-condensing @ 40°C) according to EN62053-21, EN50470-1 and EN62053-23. **Installation category** Cat. III (IEC60664, EN60664.) **Dielectric strength** 4000 VRMS for 1 minute. **Noise rejection** CMRR 100 dB, 48 to 162 Hz. **EMC** according to EN62052-11. Electrostatic discharges: 15kV air discharge. Immunity to irradiated: test with current: 10V/m from 80 to 2000MHz. Electromagnetic fields: test without any current: 30V/m from 80 to 2000MHz. Burst: on current and voltage measuring inputs circuit: 4kV. Immunity to conducted disturbances: 10V/m from 150KHz to 80MHz. Surge: on current and voltage measuring inputs circuit: 4kV; on "L" auxiliary power supply input: 1kV. Radio frequency suppression: according to CISPR 22. **Standard compliance:** safety: IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Metrology EN62053-21, EN62053-23, EN50470-3. Pulse output: DIN43864, IEC62053-31. **Approvals:** CE, cULus "Listed". **Connections:** Screw-type. Screw-type. Cable cross-section area: max. 2.5 mm2. Min./max. Screws tightening torque: 0.4 Nm / 0.8 Nm. Suggested: 0.5 Nm. Module holder: 96x96x50mm. "A" and "B" type modules: 89.5x63x16mm. "C" type module: 89.5x63x20mm. Max. depth behind the panel. With 3 modules (A+B+C): 81.7 mm. Material: ABS/Nylon PA66, self-extinguishing: UL 94 V-0. **Protection degree,** front: IP65, UL type 4x indoor (NEMA4x indoor), UL type 12 (NEMA12). Screw terminals: IP20.

UL NOTES: Use with 60 or 75°C copper conductor. Maximum surrounding air temperature 40°C. The device shall be installed in a pollution degree 2 environment. Open Type Device. The terminals L1,L2,L3 shall be acquired by a circuit where devices or system, including filters or air gaps, are used to control overvoltages at the maximum rated impulse withstand voltage peak of 6.0 kV. Devices or system shall be evaluated using the requirements in the Standard for Transient Voltage Surge Suppressors, UL 1449 and shall withstand the available short circuit current in accordance with UL 1449. Terminals tightening torque 7 Lb-In. The sum of the internal power consumption of the assembled modules shall not be more than 5.3W. For Use on Flat Surface of a Type 4X Indoor Enclosure. For Use on Flat Surface of a Type 12 Enclosure Screw for use on flat Surface Tightening torque of 4.5–9 Lb-In.

Energia attiva: Classe 0,5 secondo EN62053-22, ANSI C12.20 Classe C secondo EN50470-3. Energia reattiva Classe 1 secondo EN62053-23, ANSI C12.1. Corrente di avvio AV5, AV6 5mA. Corrente di avvio AV4, AV7 1mA. **Errori addizionali** secondo EN62053-22, ANSI C12.20. Grandezze di influenza Classe B o C secondo EN50470-3, EN62053-23, ANSI C12.1. **Distorsione armonica totale (THD):** ±1% FS (FS: 100%), AV4: Imin: 5mARMS; Imax: 3Ap; Umin: 30VRMS; Umax: 679Vp, AV5: Imin: 5mARMS; Imax: 15Ap; Umin: 30VRMS; Umax: 679Vp, AV6: Imin: 5mARMS; Imax: 15Ap; Umin: 30VRMS; Umax: 204Vp, AV7: Imin: 5mARMS; Imax: 3Ap; Umin: 30VRMS; Umax: 204Vp. **Deriva termica:** ≤200ppm/°C. **Frequenza di campionamento:** 3200 campioni/s @ 50Hz, 3840 campioni/s @ 60Hz. **Misure,** metodo TRMS misura delle forma d'onda distorte. Tipo di accoppiamento Mediante TA. **Fattore di cresta** AV5, AV6: ≤3 (15A max. picco) AV4, AV7: ≤3 (3A max. picco). **Sovraccarico corrente:** continuo (AV5 e AV6) 6A, @ 50Hz. Continuo (AV4 e AV7) 2A, @ 50Hz. Per 500ms (AV5 e AV6) 120A, @ 50Hz. Per 500ms (AV4 e AV7) 40A, @ 50Hz. **Sovraccarico di tensione,** continuo (AV4 e AV5) 830VLL, continuo (AV6 e AV7) 250VLL. Per 500 ms (AV4 e AV5) 1380VLL, per 500ms (AV6 e AV7) 415VLL. **Impedenza d'ingresso:** 400VLL (AV4 e AV5) >1,6MΩ. 208VLL (AV6 e AV7) >1,6MΩ. 5(10)A (AV5 e AV6) <0,2VA. 1(2)A (AV4 e AV7) <0,2VA. **Frequenza** da 40 a 440 Hz. **Cotatori:** totali, 4 (9+1 digit). Parziali, 4 (9+1 digit). **Uscita impulsi:** associabile ai contatori parziali e/o totali. **Registrazione dei contatori:** memorizzazione dei contatori parziali e totali. Formato dei contatori memorizzati (EEPROM) Min. -9,999,999,999 kWh/kvarh. Max. 9,999,999,999 kWh/kvarh. **Contatori di energia:** totali, +kWh, +kvarh, -kWh, -kvarh. Parziali, +kWh, +kvarh, -kWh, -kvarh. **Principio dell'analisi** FFT. **Misura dell'armonica,** corrente, fino alla 32a armonica. Tensione, fino alla 32a armonica. **Tipo di armoniche** THD (VL1 e VL1-N) lo stesso per le altre fasi: L2, L3. THD (AL1) lo stesso per le altre fasi L2, L3. **Sistema:** la distorsione armonica è misurabile sia in un sistema 3 fili che 4 fili. Tw: 0,02 sec@50Hz senza filtro. **Alimentazione:** H: 100-240 +/-10% (da 90 a 255) VCC/CA (50/60 Hz); L: 24-48 +/-15% (da 20 a 55) VCC/CA (50/60 Hz). Autoconsumo AC: 6 VA; CC: 3.5 W. **Temperatura di funzionamento** da -25°C a +55°C (da -13°F a 131°F) (U.R. da 0 a 90% senza condensa @ 40°C) secondo EN62053-21 e EN62053-23. **Temperatura di immagazzinamento** da -30°C a +70°C (da -22°F a 140°F) (U.R. <90% senza condensa @ 40°C) secondo EN62053-21 e EN62053-23. **Categoria di installazione:** Cat. III (IEC60664, EN60664). **Isolamento (per 1 minuto)** 4000 VRMS tra ingressi di misura ed alimentazione. 4000 VRMS tra alimentazione e RS485/uscite digitali. **Rigidità dielettrica** 4000 VRMS per 1 minuto. **Reiezione** CMRR 100 dB, da 48 a 62 Hz. **EMC** secondo EN62052-11. Scariche elettrostatiche 15kV scarica in aria; Immunità campi elettromagnetici irradianti, provato con corrente applicata: 10V/m da 80 a 2000MHz; provato senza corrente applicata: 30V/m da 80 a 2000MHz. Immunità ai transitori veloci, sui circuiti degli ingressi di misura in corrente e tensione: 4kV. Immunità ai radiodisturbi condotti: 10V/m da 150KHz a 80MHz. Immunità ad impulso, sui circuiti degli ingressi di misura in corrente e tensione: 4kV; sull'alimentazione "L": 1kV. Emissioni in radiofrequenza: secondo CISPR 22. **Conformità alle norme:** sicurezza IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Metrologia: EN62053-21, EN50470-3, EN62053-23. Uscita impulsiva DIN43864, IEC62053-31. Approvazioni: CE, cULus listed. **Connessioni:** a vite. Sezione del cavo: max. 2,5 mm2. Coppia min./max serraggio: 0,4 Nm / 0,8 Nm. Consigliata: 0,5 Nm. **Custodia:** dimensioni (LxAxP) modulo base: 96x96x50mm. Moduli tipo "A" e "B": 89,5x63x16mm. Modulo tipo "C": 89,5x63x20mm. Ingombro massimo dietro il pannello Con 3 moduli (A+B+C): 81,7 mm. Materiale: ABS/Nylon PA66, autoestinguenza: UL 94 V-0. Montaggio a pannello. **Grado di protezione:** frontale: IP65, tipo UL 4x indoor (NEMA4x indoor), tipo UL 12 (NEMA12). Morsetti: IP20.

Type de raccordement: au moyen d'un TC. **Facteur de crête:** AV5, AV6: ≤3 (15A pic max), AV4, AV7: ≤3 (3A pic max). **Surcharges de courant:** continu (AV5 et AV6) 6A, @ 50Hz, Continu (AV4) 2A, @ 50Hz. Pour 500ms (AV5 et AV6) 120A, @ 50Hz. Pour 500ms (AV4 et AV7) 40A, @ 50Hz. **Surcharges de tension,** continu (AV4 et AV5) 830 VLL, continu (AV6 et AV7) 250 VLL. Pour 500 ms (AV4 et AV5) 1380 VLL, pour 500 ms (AV6 et AV7) 415 VLL. **Impédance d'entrée:** 400VL-L (AV4 et AV5) > 1,6MΩ. 208VL-L (AV6 et AV7) > 1,6MΩ. 5(10)A (AV5 et AV6) < 0,2VA. 1(2)A (AV4 et AV7) < 0,2VA. **Fréquence:** 40 à 440 Hz. **Compteurs:** total 4 (9+1 digit). Partiel 4 (9+1 digit). **Sortie impulsions:** raccordement possible aux compteurs d'énergie totale et/ou partielle. **Enregistrement du comptage d'énergie:** enregistrement du comptage d'énergie totale et partielle. Enregistrement du comptage d'énergie (EEPROM). Min. -9,999,999,999 kWh/kvarh. Max. 9,999,999,999 kWh/kvarh. **Compteurs d'énergie:** compteurs d'énergie totale +kWh, +kvarh, -kWh, -kvarh. Compteurs d'énergie partielle +kWh, +kvarh, -kWh, -kvarh. **Principe d'analyse:** FFT. **Mesure des harmoniques:** courant, jusqu'à la 32ème harmonique. Tension, jusqu'à la 32ème harmonique. **Type d'harmoniques:** THD (VL1 et VL1-N) Identique pour les autres phases: L2, L3. THD (AL1) Identique pour les autres phases: L2, L3. **Réseau:** on peut mesurer la distorsion harmonique dans réseaux 3-phases ou 4-phases. Tw: 0.02 sec@50Hz sans filtres. **Version auto-alimentée:** H: 100-240 +/-10% (90 à 255) VCC/CA (50/60 Hz); L: 24-48 +/-15% (20 à 55) VCC/CA (50/60 Hz). Consommation d'énergie: AC: 6 VA; CC: 3,5 W. **Température de fonctionnement** -25°C à +55°C (-13°F à 131°F) (H.R. de 0 à 90% sans condensation @ 40°C) selon EN62053-21, EN50470-1 et EN62053-23. **Température de stockage** -30°C à +70°C (-22°F à 158°F) (H.R. < 90% sans condensation @ 40°C) selon EN62053-21, EN50470-1 et EN62053-23. **Catégorie d'installation** Cat. III (IEC60664, En60664). **Tension diélectrique:** 4kVCA RMS pour 1 minute. **Émission de bruit** CMRR 100 dB, 48 à 62 Hz. **CEM:** selon EN62052-11. Décharges électrostatiques 15kV décharge atmosphérique. Immunité à l'irradiation: test avec courant: 10V/m de 80 à 2000MHz. Champs électromagnétiques: test sans aucun courant: 30V/m de 80 à 2000MHz. Transitoires: sur circuit d'entrées de mesure courant et tension: 4kV. Immunité aux bruits par conduction 10V/m de 150KHz à 80MHz. Surtension: sur circuit d'entrées de mesure courant et tension: 4kV; sur entrée d'alimentation auxiliaire « L » : 1kV; suppression fréquence radio, selon CISPR 22. **Conformité aux standards:** sécurité IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Métrologie: EN62053-21, EN62053-23, EN50470-3. MID "annexe MI-003". Sortie impulsion DIN43864, IEC62053-31. **Approbations:** CE, cULus "Listed". **Connexions:** À vis, Section de câbles max. 2,5 mm². Min./Max. couple de serrage vis: 0,4 Nm / 0,8 Nm. Couple de serrage vis recommandé : 0,5Nm. **Boîtier DIN** Dimensions (LxHxD): 96x96x50mm. Profondeur max. derrière le panneau. Avec 3 modules (A+B+C): 81,7 mm Matériau ABS/Nylon PA66, autoextinguible: UL 94 V-0. Montage: montage sur panneau. **Indice de protection:** face avant IP65, type UL 4x indoor (NEMA4x indoor), type UL 12 (NEMA12). Terminaisons de vis IP20.

NOTES UL: Utiliser avec un conducteur en cuivre 60 ou 75°C. Température maximum air ambiant 40°C. Le dispositif doit être installé dans un environnement ayant un niveau de pollution 2. Dispositif de Type Ouvert. Les bornes L1,L2,L3 doivent être acquises par un circuit où les dispositifs ou le système, y compris les filtres ou les entrefers, sont utilisés pour contrôler les surtensions à une crête maximum de tension de tenue aux chocs de 6.0 kV. Les dispositifs ou le système doivent être évalués en fonction des exigences de la Norme pour les Suppresseurs de Surtensions Transitoires, de la UL 1449 et ils doivent aussi supporter le courant de court-circuit disponible conformément à la UL 1449. Couple de serrage bornes 7 Lb-In. La somme de la consommation d'énergie interne des modules assemblés ne doit pas dépasser 5.3W. À utiliser sur les surfaces plane d'un boîtier de Type 4X pour usage intérieur. À utiliser sur les surfaces plane d'un boîtier de Type 12. Visser pour l'utilisation sur une surface plane Couple de serrage de 4.5–9 Lb-In.

AV7: Imin: 5mARMS; Imax: 3Ap; Vmin: 30VRMS; Vmax: 204Vp. **Deriva térmica:** ≤200ppm/°C. **Frecuencia de muestreo:** 3200 lecturas/s a 50Hz, 3840 lecturas/s a 60Hz. **Medidas,** método: medida TRMS de tensión/intensidad de una onda distorsionada. Tipo de conexión: mediante CT. **Factor de cresta:** AV5, AV6: ≤3 (pico máx 15A). AV4, AV7: ≤3 (pico máx 3A). **Protec. contra sobrecargas de intensidad:** Continua (AV5 y AV6) 6A, a 50Hz. Continua (AV4) 2A, a 50Hz. Durante 500ms (AV5 y AV6) 120A, a 50Hz. Durante 500ms (AV4 y AV7) 40A, a 50Hz. **Protec. contra sobrecargas de tensión:** continua (AV4 y AV5) 830 VLL, continua (AV6 y AV7) 250 VLL. Durante 500 ms (AV4 y AV5) 1380 VLL, durante 500 ms (AV6 y AV7) 415 VLL. **Impedancia de entrada:** 400VL-L (AV4 y AV5) >1,6MΩ. 208VL-L (AV6 y AV7) >1,6MΩ. 5(10)A (AV5 y AV6) <0,2VA (AV4 y AV7) <0,2VA. **Frecuencia** 40 a 440 Hz. **Medidores.** Total 4 (9+1 dig.). Parcial 4 (9+1 díg.). **Salida de pulsos:** se puede asociar a los medidores de energía totales y parciales. **Registro del medidor:** almacenamiento de los medidores parciales y totales. Formato de almacenamiento del medidor de energía (EEPROM). Mín. -9,999,999,999 kWh/kvarh. Máx. 9,999,999,999 kWh/kvarh. **Medidores de energía:** medidores de energía total +kWh, +kvarh, -kWh, -kvarh. Medidores de energía parcial +kWh, +kvarh, -kWh, -kvarh. **Método de análisis:** FFT. **Medida de armónicos:** Intensidad Hasta armónico n°32. Tensión: Hasta armónico n°32. **Tipo de armónicos:** THD (VL1 y VL1-N) lo mismo para las otras fases: L2, L3. THD (AL1) lo mismo para las otras fases: L2, L3. **Sistema:** la distorsión armónica puede medirse en sistemas de 3 hilos y de 4 hilos. Tw: 0,02s a 50Hz sin filtro. **Alimentación auxiliar:** H: 100-240 +/-10% (90 a 255) VCC/CA (50/60 Hz); L: 24-48 +/-15% (20 a 55) VCC/CA (50/60 Hz). Consumo de potencia: CA: 6 VA; CC: 3,5 W. **Temperatura de trabajo:** -25°C a +55°C (-13°F a 131°F) (H.R. de 0 a 90% sin condensación a 40°C) según normas EN62053-21, EN50470-1 y EN62053-23. **Temperatura almacenamiento:** -30°C a +70°C (-22°F a 158°F) (H.R. de 0 a 90% sin condensación a a 40°C) según normas EN62053-21, EN50470-1 y EN62053-23. **Categoría de la instalación:** Cat. III (IEC60664, EN60664). **Resistencia dieléctrica:** 4kVCA RMS durante 1 minuto. **Rechazo al ruido** CMRR 100 dB, 48 a 62 Hz. **Compatibilidad electromag. (EMC):** según norma EN62052-11. Descargas electrostáticas: 15kV en el aire. Inmunidad a los campos electromagnéticos: prueba con corriente: 10V/m de 80 a 2000MHz. Prueba sin corriente: 30V/m de 80 a 2000MHz. Ráfagas: en el circuito de entradas de medida de intensidad y tensión: 4kV. Inmunidad a las perturbaciones conducidas: 10V/m de 150KHz a 80MHz. Irrupción: en el circuito de entradas de medida de intensidad y de tensión: 4kV; en la entrada de alimentación auxiliar "L": 1kV. Emisiones de radiofrecuencia: según norma CISPR 22. **Conformidad con las normas:** Seguridad: IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Mediciones: EN62053-21, EN62053-23, EN50470-3. MID según el "anexo MI-003". Salida de pulso: DIN43864, IEC62053-31. **Homologaciones:** CE, cULus "Listed". **Conexiones:** A tornillo. Sección del cable máx. 2,5 mm². Par de apriete mín./máx.: 0,4 Nm / 0,8 Nm. Par de apriete recomendado: 0,5 Nm. **Caja DIN** Dimensiones (Al. x An. x P.): 96x96x50mm. Máx. profundidad tras panel Con 3 módulos (A+B+C): 81,7mm. Material: ABS/Nylon PA66, autoextinguible: UL 94 V-0. Montaje: montaje a panel. **Grado de protección:** panel frontal IP65, tipo UL 4x indoor (NEMA4x indoor), tipo UL 12 (NEMA12). Conexiones: IP20.

⚠ **Read carefully the instruction manual.** If the instrument is used in a manner not specified by the producer, the protection provided by the instrument may be impaired. **Maintenance:** make sure that the connections are correctly carried out in order to avoid any malfunctioning or damage to the instrument. To keep the instrument clean, use a slightly damp cloth; do not use any abrasives or solvents. We recommend to disconnect the instrument before cleaning it.

WARNING: it allows to mount a maximum of 3 modules in total. To avoid any damage respect the position of the modules as shown on table 1. To make sure that the screw tightening torque is 0.5Nm. ALL THE MOUNTING AND DISASSEMBLY OPERATIONS OF THE INSTRUMENT AND MODULES HAVE TO OCCUR WHEN POWER SUPPLY AND THE LOADS ARE NOT CONNECTED.

■ **WIRING DIAGRAMS**
[1] 2 static opto-mosfet outputs (only one module per meter).
[2] 2 relays outputs (only one module per meter).
[3] 2 analogue outputs 20mA DC (max 2 modules per meter).
[4] 2 analogue outputs 10V DC (max 2 modules per meter).
[5] RS485 serial port (only one module per meter). **IMPORTANT:** additional devices provided with RS485 are connected in parallel. The termination of the serial output is carried out only on the last instrument of the network, by means of a jumper between B+ and T.
[6] RS232 serial port (only one module per meter). **IMPORTANT:** the termination must be done by means of a jumper between B+ and T.
Ⓐ: the communication RS232 and RS485 ports **can't be** connected and used simultaneously. **MC BAC MS module is only supplied with RS485.**
[7] Connect the Ethernet or BACnet modules using the RJ45 connector.
[G] The communication modules are provided with LED indicating the communication status RX o TX.
Preliminary operations: remove the protection cover of the contacts **[D]**, using a properly screwdriver.
Lock and sealing the modules: to lock the modules turning (clockwise) the properly fixing elements on the corners **[E]**, **[F]**, using a properly screwdriver **[H]**. To seal the instrument use the dedicated holes **[F]**.
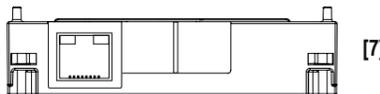

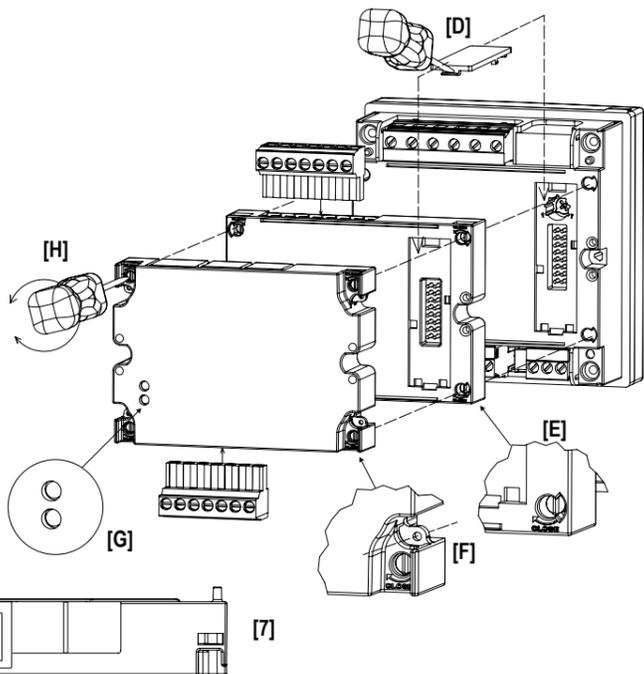

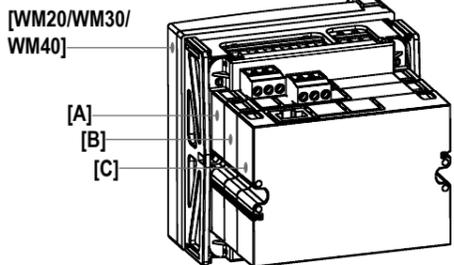

⚠ **Leggere attentamente il manuale di istruzioni.** Qualora l'apparecchio venisse adoperato in un modo non specificato dal costruttore, la protezione prevista dall'apparecchio potrebbe essere compromessa. **Manutenzione:** Per mantenere pulito lo strumento usare un panno inumidito; non usare abrasivi o solventi. Si consiglia di scollegare lo strumento prima di eseguire la pulizia.

ATTENZIONE: è possibile montare un massimo di tre moduli in totale. Per evitare malfunzionamenti rispettare la posizione dei moduli come indicato dalla tabella 1. Porre attenzione alla coppia di serraggio applicata alle viti dei morsetti che sia di: 0,5Nm. TUTTE LE OPERAZIONI DI MONTAGGIO E SMONTAGGIO DELLO STRUMENTO E DEI MODULI VANNO ESEGUITE CON ALIMENTAZIONE E CARICO SCOLLEGATI.

■ **COLLEGAMENTI ELETTRICI**
[1] Doppia uscita statica a opto-mosfet (solo un modulo per contatore).
[2] Doppia uscita a relè (solo un modulo per contatore).
[3] Doppia uscita analogica a 20mA CC (max 2 moduli per contatore).
[4] Doppia uscita analogica a 10V CC (max 2 moduli per contatore).
[5] Uscita porte seriali RS485 (solo un modulo per contatore). **IMPORTANTE:** ulteriori strumenti provvisti di RS485 sono collegati in parallelo. La terminazione dell'uscita seriale dev'essere eseguita solo sull'ultimo strumento della rete mediante un ponticello tra i morsetti B+ e T.
[6] Uscita porte seriali RS232 (solo un modulo per contatore). **IMPORTANTE:** eseguire la terminazione mediante un ponticello tra i morsetti B+ e T.
Ⓐ: le porte di comunicazione RS232 e RS485 **non possono** essere usate e connesse insieme. **Il modulo MC BAC MS è provvisto della sola porta RS485.**
[7] Collegare i moduli con uscita Ethernet o BACnet utilizzare l'apposito conettore RJ45.
[G] Il modulo di comunicazione è provvisto di appositi LED segnalanti lo stato di comunicazione RX o TX.
Operazione preliminare: smontare la finestra di protezione dei contatti **[D]**, utilizzando un apposito cacciavite a taglio.
Bloccaggio e sigillatura dei moduli: per bloccare i moduli agire sugli appositi elementi di fissaggio posti agli angoli dei moduli stessi **[F]**, **[E]**, utilizzando un adeguato cacciavite a taglio **[H]**. Il sigillo va apposto utilizzando i fori dedicati **[F]**.

⚠ **Die Betriebsanleitung aufmerksam lesen.** Sollte das Gerät nicht gemäss der Herstellerangaben verwendet werden, könnte der vom Gerät vorgesehene Schutz beeinträchtigt werden. **Wartung:** Das Gerät mit einem feuchten Tuch reinigen; keine Scheuer- oder Lösemittel verwenden. Das Gerät vor der Reinigung ausschalten.

ACHTUNG: insgesamt können maximal drei Module montiert werden. Um Störungen zu vermeiden, sollte die Position der Module gemäß Tabelle 1 eingehalten werden. Außerdem ist darauf zu achten, dass das Anzugsmoment der Klemmenschrauben 0,5Nm beträgt. SOWOHL BEI DER MONTAGE, ALS AUCH BEIM AUSBAU DES GERÄTES UND DER MODULE MÜSSEN STROMVERSORGUNG UND STROMLAST STETS VORHER ABGETRENNT WERDEN.

■ **ELEKTRISCHE ANSCHLÜSSE**
[1] Doppelter statischer Ausgang Opto-mosfet (nur ein Modul pro Zähler).
[2] Doppelter Ausgang Relais (nur ein Modul pro Zähler).
[3] Doppelter analoger Ausgang 20mA DC (max 2 Module pro Zähler).
[4] Doppelter analoger Ausgang 10V DC (max 2 Module pro Zähler).
[5] Ausgang serielle RS485-Anschlüsse (nur ein Modul pro Zähler). WICHTIG: Weitere mit RS485 ausgestattete Geräte sind parallel angeschlossen. Der Endverschluss des seriellen Ausgangs darf nur am letzten Gerät des Netzes mit einer Überbrückung zwischen den Klemmen B+ und T durchgeführt werden.
[6] Ausgang serielle RS232-Anschlüsse (nur ein Modul pro Zähler). WICHTIG: Der Endverschluss muss mit einer Überbrückung zwischen den Klemmen B+ und T durchgeführt werden.
Ⓐ: Die Kommunikationsanschlüsse RS232 und RS485 können nicht gemeinsam verwendet und angeschlossen werden. **Das MC BAC MS Modul wird nur mit RS485 geliefert.**
[7] Für den ANSCHLUSS der Module an den Ethernet- oder BACnet Ausgang den dafür vorgesehenen RJ45-Stecker verwenden.

[G] Das Kommunikationsmodul ist mit entsprechenden LED ausgestattet, die den Kommunikationsstatus RX oder TX anzeigen.
Vorbereitung: Das Schutzfenster der Kontakte **[D]** mit einem Schlitzschraubenzieher entfernen.
Befestigung und Versiegelung der Module: Die Befestigung der Module erfolgt über die an den Ecken derselben vorgesehenen Befestigungselemente **[F]**, **[E]**, mit Hilfe eines passenden Schlitzschraubenziehers **[H]**. Das Siegel wird über die hierfür vorgesehenen Löcher **[F]** angebracht.

⚠ **Lire attentivement le manuel de l'utilisateur.** Si l'appareil est utilisé dans des conditions différentes de celles spécifiées par le fabricant, le niveau de protection prévu par l'instrument peut être compromis. **Entretien:** Pour nettoyer l'instrument, utiliser un chiffon humide; ne pas utiliser d'abrasifs ou de solvants. Il faut déconnecter le dispositif avant de procéder au nettoyage.

ATTENTION: il est possible de monter un maximum de trois modules au total. Afin d'éviter les dysfonctionnements, respecter la position des modules comme l'indique le tableau 1. Faire attention à ce que le couple de serrage appliqué aux vis des bornes soit de : 0,5Nm. POUR TOUTES LES OPÉRATIONS DE MONTAGE ET DÉMONTAGE DE L'INSTRUMENT ET DES MODULES IL FAUT QUE L'ALIMENTATION ET LA CHARGE SOIENT DÉBRANCHÉES.

■ **BRANCHEMENTS ÉLECTRIQUES**
[1] Double sortie statique à opto-mosfet (un seul module par compteur).
[2] Double sortie à relais (un seul module par compteur).
[3] Double sortie analogique à 20mA CC (max 2 modules par compteur).
[4] Double sortie analogique à 10V CC (max 2 modules par compteur).
[5] Sortie ports série RS485 (un seul module par compteur). IMPORTANT: d'autres instruments pourvus de RS485 sont branchés en parallèle. La terminaison de la sortie série doit se faire uniquement sur le dernier instrument du réseau au moyen d'un cavalier entre les bornes B+ et T.
[6] Sortie ports série RS232 (un seul module par compteur). IMPORTANT: procéder à la terminaison au moyen d'un cavalier entre les bornes B+ et T.
Ⓐ: les ports de communication RS232 et RS485 ne peuvent pas être utilisés et branchés ensemble. **Le module MC BAC MS est fourni uniquement avec RS485.**
[7] Brancher les modules avec sortie Ethernet ou BACnet utiliser le connecteur RJ45 prévu à cet effet.
[G] Le module de communication est pourvu de LED spécifiques qui signalent l'état de communication RX ou TX.
Opération préliminaire: démonter la fenêtre de protection des contacts **[D]**, en utilisant un tournevis plat approprié.
**Bloquer et sceller les modules:** pour bloquer les modules, agir sur les éléments de fixation prévus à cet effet, situés aux angles des modules mêmes **[F]**, **[E]**, en utilisant un tournevis plat approprié **[H]**. Poser le sceau en utilisant les trous spécifiques prévus **[F]**.

⚠ **Lea atentamente el manual de instrucciones.** Si el instrumento se usa de modo distinto al indicado por el fabricante, la protección de seguridad ofrecida por el instrumento podrá resultar dañada. **Mantenimiento:** para limpiar el equipo utilizar siempre un trapo ligeramente humedecido, nunca productos abrasivos o disolventes. Se recomienda desconectar siempre el instrumento antes de limpiarlo.
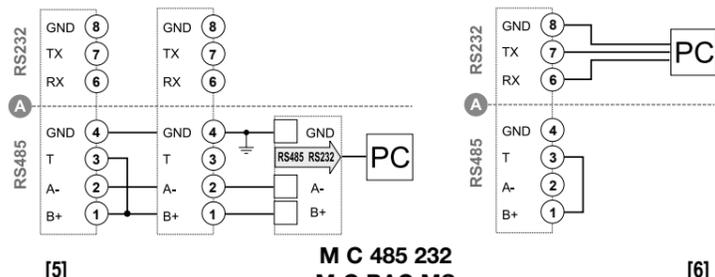

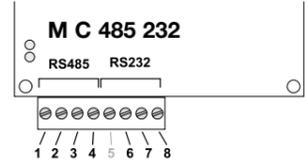

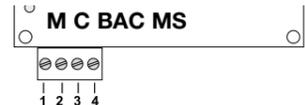

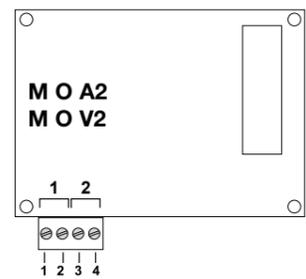

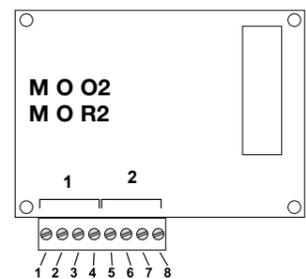

ATENCIÓN: es posible montar un total máximo de tres módulos. Para evitar daños respete la posición de los módulos tal como se indica en la tabla 1. Ponga cuidado en que el par de apriete aplicado sea de: 0,5Nm. TODAS LAS OPERACIONES DE MONTAJE Y DESMONTAJE DEL INSTRUMENTO Y DE LOS MÓDULOS DEBE REALIZARSE CON LA ALIMENTACIÓN Y LA CARGA DESCONECTADAS.

■ **CONEXIONES ELÉCTRICAS**
[1] Doble salida estática opto-mosfet (sólo un módulo por medidor).
[2] Doble salida de relé (sólo un módulo por medidor).
[3] Doble salida analógica de 20mA CC (máximo de 2 módulos por medidor).
[4] Doble salida analógica de 10V CC (máximo de 2 módulos por medidor).
[5] Salida de puerto serie RS485 (sólo un módulo por medidor). IMPORTANTE: Instrumentos adicionales dotados de RS485 se conectan en paralelo. La terminación de la salida serie sólo debe realizarse en el último instrumento de la red mediante un puente entre B+ y T.
[6] Salida de puerto serie RS232 (sólo un módulo por medidor). IMPORTANTE: realice la terminación mediante un puente entre B+ y T.
Ⓐ: los puertos de comunicación RS232 y RS485 no pueden utilizarse ni conectarse al mismo tiempo. **El módulo MC BAC MS se suministra sólo con RS485.**
[7] SConectar los módulos con salida ethernet o BACnet utilice el conector RJ45.
[G] Los módulos de comunicación están dotados de LEDs que señalan el estado de comunicación RX o TX.
Operación preliminar: desmonte la ventana de protección de los contactos **[D]**, utilizando un destornillador de punta plana.
Bloqueo y sellado de los módulos: para bloquear los módulos gire en el sentido de las agujas del reloj los específicos elementos de fijación de los extremos de los módulos **[E]**, **[F]**, utilizando un adecuado destornillador de punta plana **[H]**. Para sellar el equipo use los orificios específicos **[F]**.

A= Power supply (H or L) - Alimentazione (H o L) - Hilfsstromversorgung (H oderr L) - Alimentation auxiliaire (H ou L) - Alimentación auxiliar (H o L).
B= Measuring input - Ingressi di misura - Messeingänge - Entrées de mesure - Entr. de medida.
C= Relay outputs (MOR2)- Uscita relè (MOR2) - Relaisausgänge (MOR2) - Sorties à relais (MOR2) - Salidas de relé (MOR2).
D= Static outputs (MOO2) - Uscita statica (MOO2) - Statische Ausgänge (MOO2) - Sorties statiques (MOO2) - Salidas estáticas (MOO2).
E= Serial communication port - Porta di comunicaz. seriale- Serielle Kommunikations-Schnittstelle - Port de commun. série - Puerto de comunicación serial.
F= Ethernet port - Porta Ethernet - Ethernet-Schnittstelle - Port Ethernet - Puerto Ethernet.
G= Analogue output - Uscita analogica - Analogausgang - Sortie analogique - Salida analógica.
(1)= Compared to another module: 4kV. In the same module: 0kV - Rispetto ad un altro modulo: 4kV. Nello stesso modulo: 0kV - Gegenüber einem anderen Modul: 4 kV. In dem gleichen Modul: 0kV - Par rapport à un autre module: 4 kV. Dans le même module: 0kV - Comparado con otro módulo: 4 kV. En el mismo módulo: 0kV.
- = Combination not allowed - Combinazione non consentita - Kombination nicht erlaubt - L'association n'est pas autorisée - Combinación no permitida.
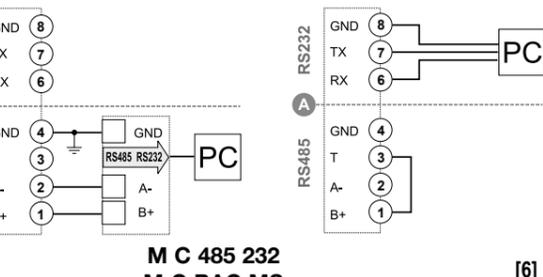

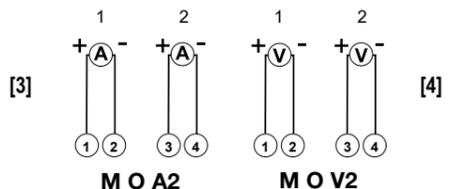

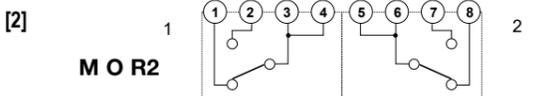

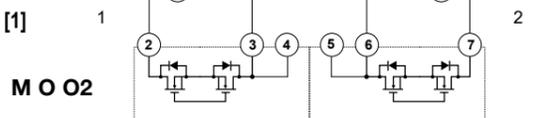

ENGLISH

Relay outputs (M O R2). Physical outputs 2 (max. one module per instrument). Type, relay, SPDT type, AC 1-5A @ 250VAC; AC 15-1.5A @ 250VAC. Configuration, by means of the front key-pad. Function, the outputs can work as alarm outputs but also as pulse outputs, remote controlled outputs, or in any other combination. Alarms linked to the virtual alarms. Min. response time ≤200ms, filters excluded. Set-point on-time delay: "0 s". Pulse: signal retransmission: Total: +kWh, -kWh, +kvarh, -kvarh. Partial: +kWh, -kWh, +kvarh, -kvarh. Pulse weight, programmable from 0.001 to 10.00 kWh/kvarh per pulse. ≥100ms <120msec (ON), ≥120ms (OFF), according to EN62052-31. Remote controlled outputs: the activation of the outputs is managed through the serial communication port.

Static outputs (M O O2). Opto-Mosfet type. Physical outputs: 2 (max. one module per instrument). Signal: VON:2.5VAC/DC/max.100mA, VOFF: 42VDC max. Configuration, by means of the front key-pad. Function: the outputs can work as alarm outputs but also as pulse outputs, remote controlled outputs, or in any other combination. Alarms: linked to virtual alarms. Min. response time ≤200ms, filters excluded. Set-point on-time delay: "0 s". Pulse: signal retransmission: Total: +kWh, -kWh, +kvarh, -kvarh. Partial: +kWh, -kWh, +kvarh, -kvarh. Pulse weight, programmable from 0.001 to 10.00 kWh/kvarh per pulse. ≥100ms < 120msec (ON), ≥120ms (OFF), according to EN62052-31. Remote controlled outputs: the activation of the outputs is managed through the serial communication port.

20mA analogue outputs (M O A2). Number of outputs 2 (WM30: max. one module per instrument; WM40 max. two modules per instrument). Accuracy (@ 25°C ±5°C, R.H. <60%) ±0.2%FS. Range 0 to 20mA. Configuration: by means of the front key-pad. Signal retransmission: the signal output can be connected to any instantaneous variable available. Scaling factor: programmable within the whole range of retransmission; it allows the retransmission management of all values from 0 to 20 mADC. Response time ≤400 ms typical (filter excluded). Ripple ≤1% (according to IEC 60688-1, EN 60688-1). Total temperature drift ≤500 ppm/°C. Load <600Ω.

10VDC analogue outputs (M O V2). Number of outputs 2 (WM30: max. one module per instrument; WM40 max. two modules per instrument). Accuracy (@ 25°C ±5°C, R.H. <60%) ±0.2%FS. Range 0 to 10 VDC. Configuration: by means of the front key-pad. Signal retransmission: the signal output can be connected to any instantaneous variable available. Scaling factor: programmable within the whole range of retransmission; it allows the retransmission management of all values from 0 to 10VDC. Response time: ≤400 ms typical (filter excluded). Ripple: ≤1% (according to IEC 60688-1, EN 60688-1). Total temperature drift: ≤350 ppm/°C. Load: ≥10kΩ.

RS485 port. Type: multidrop, bidirectional. Connections: 2-wire. Max. distance 1000m, termination directly on the module. Addresses: 247, selectable by means of the front key-pad. Protocols: MODBUS/JBUS (RTU). Protocols: modbus (247 addresses selectable by front key pad); BACnet MS/TP (instance numbers selectable by programming software). Data format: 1 start bit, 8 data bit, no/even/odd parity,1 stop bit. Baud-rate, selectable: 9.6k, 19.2k, 38.4k, 115.2k bit/s. Driver input capability 1/5 unit load. Maximum 160 transceivers on the same bus.

RS232 port. Type: bidirectional. Connections 3 wires. Max. distance 15m. Protocol: MODBUS RTU /JBUS. Data format 1 start bit, 8 data bit, no/even/odd parity,1 stop bit. Baud-rate, selectable: 9.6, 19.2k, 38.4k, 115.2k bit/s.

Ethernet/Internet port. Protocols: Modbus TCP/IP. IP configuration: Static IP / Netmask / Default gateway. Port selectable (default 502). Client connections: Max 5 simultaneously. Connections: RJ45 10/100 BaseTX. Max. distance 100m.

BACnet-IP. Protocols: BACnet-IP (for measurement reading purpose and to write object description) and Modbus TCP/IP (for measurement reading purpose and for programming parameter purpose). IP configuration: Static IP / Netmask /Default gateway. Port: Fixed: BAC0h. Device object instance: 0 to 9999 selectable by key-pad, 0 to 2^22-2 = 4.194.302 selectable by programming software or by BACnet. Supported services: "I have", "Who has", "Who is", "Read (multiple) Property". Supported objects: Type 2 (analogue value, including COV property), Type 5 (binary-value for up to 16 virtual alarm retransmission), Type 8 (device). Modbus TCP/IP. See "Ethernet/Internet port" above. Client connections: Modbus only: max 5 simultaneously. Connections: RJ45 10/100 BaseTX; Max. distance 100m.

BACnet MS/TP (on request). Available ports: 2: RS485 and Ethernet. RS485 port: Type: Multidrop, mono-directional (dynamic variables). Connections: 2-wire; Max. distance 1000m, termination directly on the module. Device object instance: 0 to 9999 selectable by key-pad, 0 to 2^22-2 = 4.194.302 selectable by programming software or by BACnet. Protocol: BACnet MS/TP (for measurement reading purpose and to write object description). Supported services: "I have", "I am", "Who has", "Who is", "Read (multiple) Property". Supported objects: Type 2 (analogue value, including COV property), Type 5 (binary-value for up to 16 virtual alarm re-transmission), Type 8 (device). Data (mono-directional) Dynamic: System and phase variables, Static: Not available. Data format: 1 start bit; 8 data bit, no parity,1 stop bit. Baud-rate: Selectable: 9.6k, 19.2k, 38.4k or 76.8k bit/s. Driver input capability: 1/5 unit load, maximum 160 transceivers on the same bus. MAC addresses: Selectable: 0 to 127. Ethernet port. Protocol: Modbus TCP/IP (for programming parameter purpose). IP configuration: Static IP / Netmask /Default gateway. Modbus Port: Selectable (default 502). Client connections: only Modbus: max 5 simultaneously.

M C EI: Protocols: Ethernet/IP (for measurement reading purpose) and Modbus TCP/IP (for programming parameter purpose). IP configuration: Static IP / Netmask / Default gateway. Modbus Port: Selectable (default 502); Modbus only: max 5 simultaneously RJ45 10/100 Base TX Max distance 100m Ethernet/IP port Topology Star RJ45 standard Max distance 100m. Level: Commercial level. Connection: connection establishment: target. Messaging: Class 1 and class 3 messaging. Supported features: ACD (Address Conflict Detection), UCMM, List service 0x0004, List identity 0x0063, Register session 0x0065, Unregister session 0x0066, Send RR data 0x006F, Send Unit Data 0x0070. Data Dynamic (reading only): System and phase variables (Ethernet/IP): see Ethernet/IP protocol document, Static (reading and writing only): All the configuration parameters (Modbus TCP only).

Operating temperature -25°C to +55°C (-13°F to 131°F) (R.H. from 0 to 90% non-condensing @ 40°C) according to EN62053-21, EN50470-1 and EN62053-23. **Storage temperature** -30°C to +70°C (-22°F to 158°F) (R.H. < 90% non-condensing @ 40°C) according to EN62053-21, EN50470-1 and EN62053-23. **Standard compliance:** safety: IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. **Approvals:** CE, cULus "Listed". **Connections:** Screw-type. Cable cross-section area: max. 2.5 mm2. Min./max. Screws tightening torque: 0.4 Nm / 0.8 Nm. Suggested: 0.5 Nm. **Housing** dimension: "A" and "B" type module: 89.5x63x16mm. "C" type module: 89.5x63x20mm. Max. depth behind the panel. With 3 modules (A+B+C): 81.7 mm. Material, Nylon PA66, self-extinguishing: UL 94 V-0. **Protection degree, s**crew terminals: IP20.

ITALIANO

Uscite relè (M O R2). Uscite fisiche, 2 (max. un modulo per strumento). Relè, tipo SPDT, CA 1-5A @ 250VCA; CA 15-1,5A @ 250VCA. Configurazione, mediante tastiera frontale. Funzione, l'uscita può funzionare come uscita allarme, come uscita impulsi o controllo remoto o in qualsiasi altra combinazione. Allarmi associati agli allarmi virtuali. Tempo min di risposta ≤200ms, filtro escluso. Ritardo all'attivazione: "0 s". Impulsi, ritrasmissione segnale totale: +kWh, -kWh, +kvarh, -kvarh. Parziale: +kWh, -kWh, +kvarh, -kvarh. La lista di variabili può essere associata ad ogni uscita. Peso impulso programmabile da 0,001 a 10,00 kWh/kvarh per impulso. ≥100ms <120msec (ON), ≥120ms (OFF), secondo EN62052-31. Controllo remoto: l'attivazione delle uscite è gestita mediante la porta seriale di comunicazione.

Uscite statiche (M O O2). Tipo Opto-Mosfett. Uscite fisiche 2 (max. un modulo per strumento). Segnale VON: 2,5VCA/CC/max. 10mA. VOFF: 42VCC max. Configurazione, mediante tastiera frontale. Funzione: l'uscita può funzionare come uscita allarme, come uscita impulso o controllo remoto o in qualsiasi altra combinazione. Allarmi associati agli allarmi virtuali. Tempo min risposta: ≤200ms, filtro escluso. Ritardo all'attivazione: "0 s". Impulsi: ritrasmissione segnale totale +kWh, -kWh, +kvarh, -kvarh. Parziale +kWh, -kWh, +kvarh, -kvarh. La lista di variabili può essere associata ad ogni uscita. Peso impulso, programmabile da 0,01 a 10,00 kWh/kvarh per impulso. ≥100ms <120msec (ON), ≥120ms (OFF), secondo EN62052-31. Controllo remoto: l'attivazione delle uscite è gestita mediante la porta seriale di comunicazione.

Uscita analogica 20mA (M O A2). Numero di uscite 2 (WM30 max. un modulo per strumento; WM40 max. due moduli per strumento). Precisione (@ 25°C ±5°C, U.R. ≤60%) ±0,2%FS. Campo da 0 a 20mA. Configurazione, mediante tastiera frontale. Ritrasmissione segnale, il segnale d'uscita può essere associato a qualsiasi variabile istantanea disponibile. Fattore di scala programmabile all'interno di tutto il campo di ritrasmissione; permette la gestione della ritrasmissione di tutti i valori da 0 a 20 mA. Tempo di risposta ≤400 ms tipico (filtro escluso). Ripple ≤1% (secondo IEC 60688-1, EN 60688-1). Deriva termica totale ≤500 ppm/°C. Carico <600Ω.

10VDC analogue outputs (M O V2). Numero di uscite 2 (WM30 max. un modulo per strumento; WM40 max. due moduli per strumento). Precisione (@ 25°C ±5°C, U.R. ≤60%) ±0,2%FS. Campo da 0 a 10VCC. Configurazione mediante tastiera frontale. Ritrasmissione segnale: il segnale d'uscita essere associato ad ogni variabile istantanea disponibile. Fattore di scala programmabile all'interno di tutto il campo di ritrasmissione; permette la gestione della ritrasmissione di tutti i valori da 0 a 10VCC. Tempo di risposta: ≤400 ms tipico (filtro escluso). Ripple ≤1% (secondo IEC 60688-1, EN 60688-1). Deriva termica totale ≤350 ppm/°C. Carico ≥10kΩ.

Porta RS485. Tipo: Multidrop, bidirezionale. Connessione 2 fili. Distanza massima 1000m, terminazione direttamente sullo strumento. Protocolli: MODBUS (247 indirizzi selezionabili dalla tastiera frontale); BACnet MS/TP (numero istanza selezionabile mediante software). Formato dati: 1 bit di start, 8 bit di dati, nessuna parità, 1 bit di stop. Velocità di comunicazione selezionabile: 9,6k, 19,2k, 38,4k, 115,2k bit/s. Dispositivi in rete 1/5 unit load. Massimo 160 dispositivi nella stessa rete.

Porta RS232. Tipo: bidirezionale. Connessioni 3 fili. Distanza max. 15m. Protocollo MODBUS RTU /JBUS. Formato dati: 1 bit di start, 8 bit di dati, nessuna parità, 1 bit di stop. Velocità di comunicazione selezionabile: 9,6k, 19,2k, 38,4k, 115,2k bit/s. Dispositivi in rete 1/5 unit load. Massimo 160 dispositivi nella stessa rete.

Porta Ethernet/Internet. Protocollo Modbus TCP/IP. Configurazione IP: IP statico / Netmask / Gateway di default. Porta selezionabile (default 502). Connessioni utente Max 5 simultaneii. Connessioni RJ45 10/100 BaseTX. Distanza max 100m.

BACnet-IP. Protocollo: BACnet-IP (con la funzione di lettura della misura e scrittura della descrizione dell'oggetto) e Modbus TCP/IP (con la funzione di lettura della misura e la funzione di programmazione dei parametri). BACnet-IP. Configurazione IP: Statico IP / Netmask / gateway di default . Porta: Fissa: BAC0h. Device object instance: da 0 a 9999 selezionabile tramite tastiera, da 0 a 2^22-2 = 4.194.302 selezionabile tramite software di programmazione o BACnet. Servizi supportati: "I have", "I am", "Who has", "Who is", "Read (multiple) Property". Oggetti supportati: Tipo 2 (valore analogico, incluso proprietà COV), Tipo 5 (valore binario fino a 16 allarmi virtuali ritrasmessi), Tipo 8 (dispositivo). Vedere "Porta Ethernet/ Internet " sotto. Connessioni utente: solo Modbus: max 5 contemporaneamente. Connessioni: RJ45 10/100 Base TX; Distanza Max. 100m.

BACnet MS/TP (a richiesta). Porte disponibili: 2: RS485 e Ethernet. Porta RS485. Tipo: Multidrop, monodirezionale (variabili dinamiche). Connessioni 2 fili; Distanza Max. 1000m, terminazione della linea direttamente sul modulo. Device object instance: da 0 a 9999 selezionabile tramite tastiera, da 0 a 2^22-2 = 4.194.302 selezionabile tramite software di programmazione o BACnet. Servizi supportati: "I have", "I am", "Who has", "Who is", "Read (multiple) Property". Oggetti supportati: Tipo 2 (valore analogico, incluso proprietà COV), Tipo 5 (valore binario fino a 16 allarmi virtuali ritrasmessi), Tipo 8 (dispositivo). Dati (monodirezionale) Dinamico: variabili di fasi e sistema, Statico: non disponibile. Formato dati: 1 bit di start, 8 bit dati, nessuna parità, 1 bit di stop. Velocità di comunicazione selezionabile: 9,6k, 19,2k, 38,4k o 76.8k bit/s. Driver input capability: 1/5 unit load, massimo 160 ricetrasmettitori sulla stessa bus. indirizzo MAC: selezionabile: da 0 a 127. Porta Ethernet. Protocollo: Modbus TCP/IP (con la funzione di programmazione dei parametri). Configurazione IP: IP statico / Netmask /Gateway di default. Porta Modbus. Selezionabile (di default 502). Connessioni utente: Solo Modbus: max 5 contemporaneamente.

M C EI: Protocolli: Ethernet/IP (con la funzione di lettura della misura) e Modbus TCP/IP (con la funzione di programmazione dei parametri). IP statico / Netmask / Gateway di default. Porta Modbus. Selezionabile (di default 502). Solo Modbus: max 5 contemporaneamente RJ45 10/100 Base TX distanza Max 100m Ethernet/IP topologia della porta a stella RJ45 standard distanza max 100m. Livello: livello commerciale. Connessioni: Stabilimento connessione: obiettivo. Messaging: Classe 1 e classe 3. Funzioni supportate: ACD (Address Conflict Detection), UCMM, Lista servizio 0x0004, Lista identità 0x0063, Sessione registrata 0x0065, sessione non registrata 0x0066, Dati RR inviati 0x006F, unità dati spediata 0x0070. Dati dinamici (solo lettura): variabili di sistema e di fase (Ethernet/IP): vedere il documento protocollo Ethernet/IP, statico (solo lettura e scrittura): tutti i parametri di configurazione (solo Modbus TCP).

Temperatura di funzionamento da -25°C a +55°C (da -13°F a 131°F) (U.R. da 0 a 90% senza condensa @ 40°C) secondo EN62053-21 en EN62053-23. **Temperatura di immagazzinamento** da -30°C a +70°C (da -22°F a 158°F) (U.R. < 90% senza condensa @ 40°C) secondo EN62053-21 e EN62053-23. **Conformità alle norme:** sicurezza IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Uscita impulsiva DIN43864, IEC62053-31. Approvazioni: CE, cULus listed. **Connessioni:** a vite. Sezione del cavo: max. 2,5 mm2. Coppia min./max ser raggio: 0,4 Nm / 0,8 Nm. Consigliata: 0,5 Nm. **Custodia:** dimensioni (LxAxP). Moduli tipo "A" e "B": 89,5x63x16mm. Modulo tipo "C": 89,5x63x20mm. Ingombro massimo dietro il pannello Con 3 moduli (A+B+C): 81,7 mm. Materiale: nylon PA66, autoestinguenza: UL 94 V-0. Montaggio a pannello. **Grado di protezione:** Morsetti: IP20.

DEUTSCH

Relaisausgängen (M O R2). Physisch Ausgänge 2 (max. 1 Modul pro Netzwerk). Typ Relais, SPDT Typ AC 1-5A bei 250VAC; AC 15-1,5A bei 250VAC. Konfiguration: Durch die vordere Tastatur. Funktion Die Ausgänge können als Alarmausgänge benutzt werden, aber auch als Impulsausgänge, ferngesteuerte Ausgänge oder in jeder anderen beliebigen Kombination. Alarme verbunden mit virtuellem Alarm, für weitere Einzelheiten siehe Virtuelle Alarme. Min. Ansprechzeit: ≤200ms, (ohne Filter) und Einstellung der Einschalt-zeitverzögerung: "0 s". Impuls Signalweiterübertragung, Gesamt: +kWh, -kWh, +kvarh, -kvarh. Partiell: +kWh, -kWh, +kvarh, -kvarh. Impulstyp, Die oben aufgelisteten Variablen können mit jedem beliebigen Ausgang verbunden werden. Impulsgewicht: programmierbar von 0,001 bis 10,00 kWh/kvarh pro Impuls. ≥100ms <120msec (ON), ≥120ms (OFF), gemäß EN62052-31. Ausgabegefernsteuerung Die Aktivierung der Ausgänge wird gehandhabt durch serielle schnittstelle.

Statikausgänge (M O O2). Typ: Opto-Mos. Physisch Ausgänge 2 (max. 1 Modul pro Netzwerk). Signal, VON:2.5VAC/DC/max.100mA. VOFF: 42VDC max. Konfiguration Durch die vordere Tastatur. Funktion: Die Ausgänge können als Alarmausgänge benutzt werden, aber auch als Impulsausgänge, ferngesteuerte Ausgänge oder in jeder anderen beliebigen Kombination. Alarme verbunden mit virtuellem Alarm, für weitere Einzelheiten siehe Virtuelle Alarme. Min. Ansprechzeit ≤200ms, (ohne Filter) und Einstellung der Einschalt-zeitverzögerung: "0 s". Impuls Signalweiterübertragung, Gesamt: +kWh, -kWh, +kvarh, -kvarh. Partiell: +kWh, -kWh, +kvarh, -kvarh. Impulstyp: Die oben aufgelisteten Variablen können mit jedem beliebigen Ausgang verbunden werden. Impulsgewicht: programmierbar von 0,001 bis 10,00 kWh/kvarh pro Impuls. ≥100ms <120msec (ON), ≥120ms (OFF), gemäß EN62052-31. Ausgabegefernsteuerung, Die Aktivierung der Ausgänge wird gehandhabt durch serielle schnittstelle.

20mA Analoge Ausgänge (M O A2). Anzahl der Ausgänge 2 (WM30: max. 1 Modul pro Netzwerk; WM40: max. 2 Module pro Netzwerk). Genauigkeit (bei 25°C ±5°C, R.F. ≤60%) ±0,2%BE. Bereich 0 bis 20mA. Konfiguration, Durch die vordere Tastatur. Signalweiterübertragung: Der Signalausgang kann mit einer beliebigen unmittelbaren Variable. Skalierungsfaktor: Programmierbar innerhalb des gesamten Bereichs der Weiterübertragung; gestattet die Verwaltung der Weiterübertragung aller Werte von 0 bis 20 mADC. Ansprechzeit ≤400 ms typisch (ohne Filter). Wellenstrom: ≤1% (gemäß IEC 60688-1, EN 60688-1). Temperaturdrift insgesamt: ≤500 ppm/°C. Last: ≤600Ω.

10VDC Analoge Ausgänge (M O V2). Anzahl der Ausgänge 2 (WM30: max. 1 Modul pro Netzwerk; WM40: max. 2 Module pro Netzwerk). Genauigkeit (bei 25°C ±5°C, R.F. ≤60%): ±0,2%BE. Bereich: 0 bis 10 VDC. Konfiguration: Durch die vordere Tastatur. Signalweiterübertragung: Der Signalausgang kann mit einer beliebigen unmittelbaren Variable. Skalierungsfaktor: Programmierbar innerhalb des gesamten Bereichs der Weiterübertragung; gestattet die Verwaltung der Weiterübertragung aller Werte von 0 bis 10VDC. Ansprechzeit: ≤400 ms typisch (ohne Filter). Welligkeit (Rippel): ≤1% (gemäß IEC 60688-1, EN 60688-1). Temperaturdrift insgesamt: ≤500 ppm/°C. Last: ≥10kΩ.

Schnittstelle RS485. Typ: Multidrop, Bidirektional. Anschlüsse: 2-Leiter. Max. Entfernung 1000m, Abschluss direkt am Modul. Protokolle: MODBUS/JBUS (RTU). Protokolle: MODBUS (247 wählbar über die vordere Tastatur); BACnet MS/TP (Instanz-Anzahl wählbar über die Programmiersoftware). Datenformat: 1-Startbit, 8-Datenbits, keine Parität/gerade Parität, ungerade Parität, 1 Stoppbit, Übertragungsgeschwindigkeit. Wählbar: 9,6k, 19,2k, 38,4k, 115,2k bit/s. Treiber Eingangsimpetanz 1/5 Leistungsaufnahme Maximal Geräte 160 am gleichen Bus.

Schnittstelle RS232. Typ: Bidirektional. Anschlüsse: 3-Leiter. Max. Entfernung 15m. Protokolle: MODBUS RTU/ JBUS. Datenformat: 1-Startbit, 8-Datenbits, keine Parität/gerade Parität, ungerade Parität, 1 Stoppbit, Übertragungsgeschwindigkeit. Wählbar: 9,6k, 19,2k, 38,4k, 115,2k bit/s. Treiber Eingangsimpetanz 1/5 Leistungsaufnahme Maximal Geräte 160 am gleichen Bus.

Ethernet/Internet Schnittstelle. Protokoll: Modbus TCP/IP. IP Konfiguration: Statisch IP / Netzmaske / Standard-Gateway. Schnittstelle: wählbar (Standard 502). Client Verbindung: Max 5 gleichzeitig. Anschlüsse: RJ45 10/100 BaseTX, Max. Entfernung 100m.

BACnet-IP. Protokoll: BACnet-IP (für Messunganzeige und um Objektbeschreibung zu schreiben) und Modbus TCP/IP (für Messunganzeige und Parameterprogrammierung). BACnet-IP: IP Konfiguration Statisch IP / Netzmaske / Standard-Gateway. Schnittstelle: Fest: BAC0h. Device object instance: 0 bis 9999 wählbar über die Tastatur, 0 bis 2^22-2 = 4.194.302, wählbar über Programmier-Software oder über BACnet. Unterstützte Funktion: "I have", "I am", "Who has", "Who is", "Read (multiple) Property". Unterstützte Objekte: Typ 2 (analogwert einschließlich COV -"Change of Value" -Eigenschaft), Typ 5 (Binärwert für bis zu 16 virtuelle Alarmübertragungen), Typ 8 (device). IP Konfiguration: Statisch IP / Netzmaske / Standard-Gateway. Modbus TCP/IP: siehe „Ethernet/Internet Schnittstelle" auf oben. Client Verbindung: MODBUS Max.: Max 5 gleichzeitig. Anschlüsse: RJ45 10/100 BaseTX, Max. Entfernung 100m.

BACnet MS/TP (auf Anfrage). Verfügbare Schnittstelle: 2: RS485 und Ethernet. RS485 Schnittstelle: Typ: Multidrop,unidirektional (Dynamikgrößen). Anschlüsse: 2-Leiter. Max. Entfernung 1000m, Abschluss direkt am Modul. Device object instance: 0 bis 9999 wählbar über der vordere Tastatur. 0 bis 2^22-2 = 4.194.302, wählbar über Programmier-Software oder über BACnet. Protokoll: BACnet MS/TP (für Messwertanzeige und Schreibfunktion der Objektbeschreibung). Unterstützte Funktion: "I have", "I am", "Who has", "Who is", "Read (multiple) Property". Unterstützte Objekte: Typ 2 (Analgwert einschließlich COV -"Change of Value" -Eigenschaft), Typ 5 (Binärwert für bis zu 16 virtuelle Alarmübertragungen), Typ 8 (device). Datenübertragung (unidirektional) Dynamisch: System und Phasengrößen: siehe Tabelle „Liste der Messgrößen...". Statisch: nicht verfügbar. Datenformat: 1-Startbit, 8-Datenbits, keine Parität/1 Stoppbit. Übertragungsgeschwindigkeit. Wählbar: 9,6k, 19,2k, 38,4k oder 76,8 kbit/s. Treiber Eingangsimpetanz: 1/5 Leistungsaufnahme Maximal Geräte 160 am gleichen Bus. MAC-Adressen: wählbar: 0 bis 127. Ethernet Schnittstelle. Protokoll: Modbus TCP/IP (für Parameterprogrammierung). IP Konfiguration: Statisch IP / Netzmaske / Standard-Gateway. Modbus Schnittstelle: Wählbar (Standard 502) nur Modbus: Max 5 gleichzeitig.

M C EI: Protokolle: Ethernet/IP (für Messung-anzeige) und Modbus TCP/IP (für Konfiguration Programmierungsparameter). IP Konfiguration: Statisch IP/Netzmaske / Standard-Gateway. Modbus Schnittstelle: Wählbar (Standard 502) nur Modbus: Max 5 gleichzeitig RJ45 10/100 BaseTX Max. Entfernung 100m. Ethernet/IP Schnittstelle: Topologie: "Star". Kabel RJ45 Standard. max. Kabellänge 100 m. Level: "commercial level". Verbindung: "connection establishment: target". Meldungen: Klasse 1 und Klasse. Unterstützte Leistungen: ACD (Address Conflict Detection) UCMM "List services" 0x0004 "List identity" 0x0063 "Register session" 0x0065 "Unregister session" 0x0066 "Send RR data" 0x006F "Send unit data" 0x0070. Daten: Dynamisch (nur lesen): System und Phasengrößen (Ethernet/IP): siehe Ethernet/IP-Protokoll Dokument. Statisch (lesen und schreiben): alle Konfigurations Parameter (nur Modbus TCP).

Betriebstemperatur -25°C bis +55°C (-13°F bis 131°F) (R.F. von bis 90% nicht kondensierend bei 40°C) gemäß EN62053-21, EN50470-1 und EN62053-23. **Lagertemperatur:** -30°C bis +70°C (-22°F bis 158°F) (R.F. < 90% nicht kondensierend bei 40°C) gemäß EN62053-21, EN50470-1 und EN62053-23. **Standardkonformität:** Sicherheit: IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Impulsausgang: DIN43864, IEC62053-31. Zulassungen: CE, cULus "Listed". **Anschlüsse:** Schraubklemmen, Kabelquerschnitt: max. 2,5 mm². Min./Max. Anzugsmoment: 0,4 Nm / 0,8 Nm. Empfohlene Anzugsmoment: 0,5 Nm. **Gehäuse** DIN Abmessungen (LxHxB): "A" und "B" Module: 89,5x63x16mm. "C" Module: 89,5x63x20mm. Max. Tiefe hinter der DIN-Schiene Mit 3 Modulen (A+B+C): 81,7 mm. Material Nylon PA66, selbstlöschend: UL 94 V-0. Montage: DIN-Schiene. **Schutzgrad:** Schraubenklemmen: IP20.

FRANÇAIS

Sortie relais (M O R2). Sorties physiques : 2 (max. un module par instrument). Type: Relais, type SPDT CA 1-5A @ 250VCA; CA 15-1,5A @ 250VCA. Configuration au moyen de clavier avant. Fonction: les sorties peuvent aussi fonctionner en tant que sorties d'alarme, sorties d'impulsion, sorties de contrôle à distance, ou d'autres combinations. Alarme relié aux alarmes virtuelles, d'autres détails voir Alarme virtuelles. Temps de réponse min. ≤200ms, filtre exclu. Point de réglage du délai on-time: "0 s". Impulsion: signal de retransmission Total: +kWh, -kWh, +kvarh, -kvarh. Partiel: +kWh, -kWh, +kvarh, -kvarh. Type d'impulsion: les variables mentionnées ci-dessus peuvent être connectées à n'importe quelle sortie. Poids impulsion: programmable de 0,001 à 10,00 kWh/kvarh par impulsion. ≥100ms < 120msec (ON), ≥120ms (OFF), selon EN62052-31. Contrôle à distance: l'activation des sorties est gérée à travers le port série de communication.

Sortie statique (M O O2). Type: Opto-Mos. Sorties physiques 2 (max. un module par instrument). Signal: VON: 2,5VCA/CC/max.100mA, VOFF: 42VCC max. Configuration au moyen de clavier avant. Fonction: les sorties peuvent aussi fonctionner en tant que sorties d'alarme, sorties d'impulsion, sorties de contrôle à distance, ou d'autres combinations. Alarme relié aux alarmes virtuelles, d'autres détails voir Alarme virtuelles. Temps de réponse min. ≤200ms, filtre exclu. Point de réglage du délai on-time: "0s". Pulse: Retransmission de signal: Total: +kWh, -kWh, +kvarh, -kvarh. Partiel: +kWh, -kWh, +kvarh, -kvarh. Type d'impulsion: les variables mentionnées ci-dessus peuvent être connectées à n'importe quelle sortie. Poids del pulse: programmable de 0,001 à 10,00 kWh/kvarh par impulsion. ≥100ms < 120msec (ON), ≥120ms (OFF), selon norme EN62052-31. Contrôle à distance L'activation des sorties est gérée à travers le port série de communication.

Sorties analogiques 20mA (M O A2). Nombre de sorties 2 (WM30: max. un module par instrument; WM40: max. deux modules par instrument). Précision (@ 25°C ±5°C, H.R. ≤60%): ±0,2% PE. Intervalle 0 à 20mA. Configuration au moyen de clavier avant. Signal de retransmission: la sortie du signal peut être connectée à n'importe quelle variable disponible. Facteur d'échelle: programmable dans toute la plage de retransmission ; il permet de gérer la retransmission de toute valeur à partir de 0 à 20 mACC. Temps de réponse: ≤400 ms typique (filtre exclu). Ondulation: ≤1% (selon IEC 60688-1, EN 60688-1). Dérive de température totale ≤500 ppm/°C. Charge: ≤600Ω.

Sorties analogiques 10VCC (M O V2). Nombre de sorties: 2 (WM30: max. un module par instrument; WM40: max. deux modules par instrument). Précision (@ 25°C ±5°C, H.R. ≤60%): ±0.2% PE. Intervalle 0 à 10 VDC. Configuration au moyen de clavier avant. Signal de retransmission: la sortie du signal peut être connectée à n'importe quelle variable disponible. Facteur d'échelle: programmable dans toute la plage de retransmission; il permet de gérer la retransmission de toute valeur à partir de 0 à 10VCC. Temps de réponse ≤400 ms typique (filtre exclu). Ondulation: ≤1% (selon IEC 60688-1, EN 60688-1). Dérive de température totale ≤350 ppm/°C. Charge: ≤600Ω.

Port RS485. Type, circuit multipoints, bidirectionnel. Connexions: 2 câbles, Distance max 1000m, Raccordement directement sur le module. Protocoles: MODBUS/JBUS (RTU). Protocoles: MODBUS (247 sélectionnable à travers del teclado frontal); BACnet MS/TP (nombre d'instance sélectionnable par logiciel de programmation). Format de données: 1 bit de départ, 8 bits de données,pas de parité, parité paire, parité impaire, 1 bit de stop. Baud-rate: à sélectionner: 9,6k, 19,2k, 38,4k, 115,2k bit/s. Capacité entrée driver: 1/5 unités en charge. Maximum 160 emetteurs/ récepteurs sur le même bus.

Port RS232. Type bidirectionnel. Connexions: 3 câbles, distance max 15m. Protocole: MODBUS RTU/ JBUS. Format de données: 1 bit de départ, 8 bits de données,pas de parité, parité paire, parité impaire, 1 bit de stop. Baud-rate: à sélectionner: 9,6k, 19,2k, 38,4k, 115,2k bit/s.

Port Ethernet/Internet. Protocole: Modbus TCP/IP. Configuration IP: IP statique / Netmask / Portail implicite. Port sélectionnable (par défaut 502). Connexions client Max. 5 simultanément. Connexions: RJ45 10/100 BaseTX. Distance max 100m.

BACnet-IP (sur demande). Protocole: BACnet-IP (pour la lecture de mesure et pour écrire la description de l'objet) et Modbus TCP/IP (pour la lecture de mesure et pour paramètre de programmation). BACnet-IP: IP statique / Netmask / Portail implicite. Port: Fixe: BAC0h. Device Object Instance: 0 à 9999 sélectionnable par clavier avant. 0 à 2^22-2 = 4.194.302, sélectionnable par logiciels de programmation ou par BACNet. Services supportés: "I have", "I am", "Who has", "Who is", "Read (multiple) Property". Objets supportés: Type 2 (valeur analogique incluant la fonction de covariance). Type 5 (valeur binaire pour la retransmission jusqu'à un maximum de 16 alarmes virtuelles), Type 8 (device). Configuration IP: IP statique / Netmask / Portail implicite. Modbus TCP/IP: voir "Port Ethernet/Internet" au-dessus. Client Verbindung: seul Modbus: Max. 5 simultanément Connexions: RJ45 10/100 BaseTX Distance max.100m.

BACnet MS/TP (sur demande). Ports disponibles: 2: RS485 et Ethernet. Port RS485 Type: circuit multipoints, unidirectionnel (variables dynamiques. Connexions: 2 câbles, Distance max 1000m, Raccordement directement sur le module. Device Object Instance: 0 à 9999 sélectionnable par clavier avant. 0 à 2^22-2 = 4.194.302, sélectionnable à travers del software de programmation o mediante BACNet. Protocole: BACnet MS/TP (pour la lecture de mesure et pour l'écriture des descriptions de l'objet). Services supportés: "I have", "I am", "Who has", "Who is", "Read (multiple) Property". Objets supportés: type 2 (valeur analogico incluyendo propiedad COV), Typ 5 (valeur binaire) jusqu'à la retransmission de 16 alarmes virtuelles maximum). Type 8 (dispositif). Données (unidirectionnel) Dynamiques: Variables de phase et réseau: voir la table "Liste des variables...". Estático: no disponible. Format de données: 1 bit de arranque, 8 bit de données,pas de parité, 1 bit de stop. Baud-rate: à sélectionner: 9,6k, 19,2k, 38,4k ou 76,8 kbit/s. Capacité entrée driver: 1/5 unités en charge. Maximum 160 emetteurs/ récepteurs sur le même bus. Adresses MAC: à sélectionner: 0 à 127. Port Ethernet Protocole: Modbus TCP/IP (pour configuration paramètre de programmation). Configuration IP: IP statique / Netmask / Portail implicite. Port Modbus: à sélectionner (implicite 502). seul Modbus: Max. 5 simultanément.

M C EI: protocoles: Ethernet/IP (pour la lecture de mesure) et Modbus TCP/IP (pour configuration paramètre de programmation). Configuration IP: IP statique / Netmask / Portail implicite. Port Modbus: à sélectionner (implicite 502). seul Modbus: Max. 5 simultanément RJ45 10/100 BaseTX. Distance max.100m. Port Ethernet/IP: topologie: "Star". RJ45 standard. distance max. 100m. Niveau: "Commercial level". Connexion establishment: target. Messagerie: classe 1 y classe 3. Funciones soportadas: ACD (Address Conflict Detection). UCMM. "List services" 0x0004. "List identity" 0x0063. "Register session" 0x0065. "Unregister session" 0x0066. "Send RR data" 0x006F. "Send unit data" 0x0070. Données, dynamiques (seulement lecture): variables de système et de chaque phase (Ethernet/IP): voir le document Protocole Ethernet/IP. Statique (écriture et lecture): tous les paramètres de configuration. (seul Modbus).

Température de fonctionnement -25°C à +55°C (-13°F à 131°F) (H.R. de 0 à 90% sans condensation @ 40°C) selon EN62053-21, EN50470-1 und EN62053-23. **Température de stockage** -30°C à +70°C (-22°F à 158°F) (H.R. < 90% sans condensation @ 40°C) selon EN62053-21, EN50470-1 und EN62053-23. **Conformité aux standards:** sécurité IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Salida de impulsion: DIN43864, IEC62053-31. **Approbations:** CE, cULus "Listed". **Connexions:** à vis, Section de câbles max. 2,5 mm². Min./Max. couple de serrage de vis: 0,4 Nm / 0,8 Nm. Couple de serrage de vis recommandé: 0,5Nm. **Boîtier DIN** Dimensions (LxHxD). Modules "A" et "B": 89,5x63x16mm. Modules"C": 89,5x63x20mm. Profondeur max. derrière le panneau. Avec 3 modules (A+B+C): 81,7 mm. Matériau Nylon PA66, autoextinguible: UL 94 V-0. Montage: montage sur panneau. **Indice de protection:** terminaisons de vis IP20.

ESPAÑOL

Salidas de relé (M O R2). Salidas físicas: 2 (máx. un módulo con equipo). Tipo: Relé, tipo SPDT AC 1-5A a 250VCA; AC 15-1,5A a 250VCA Configuración: mediante teclado frontal. Función: las salidas pueden funcionar como salidas de alarma,pero también como salidas de pulso, salidas de control remoto o en cualquier otra combinación. Alarmas vinculadas con alarmas virtuales, para más detalles véase Alarmas virtuales. Tiempo mín. respuesta: ≤200ms, filtro excluido. Retardo de activ. punto de consigna: "0s". Pulso: retransmisión de señal, Total: +kWh, -kWh, +kvarh, -kvarh. Parcial: +kWh, -kWh, +kvarh, -kvarh. Salidas de pulso: las anteriores variables pueden conectarse a cualquier salida. Peso del pulso: programable de 0,001 a 10,00 kWh/kvarh por pulso. ≥100ms <120ms (ON), ≥120ms (OFF), según norma EN62052-31. Control remoto: la activación de las salidas se gestiona mediante el puerto de comunicación.

Salidas estáticas (M O O2). Tipo Opto-Mos. Salidas físicas: 2 (máx. un módulo por equipo). Señal: VON: 2.5VCA/CC/máx.100mA. VOFF: 42VCC máx. Configuración: mediante teclado frontal. Función: las salidas pueden funcionar también como salidas de alarma, como salidas de pulso, como salidas de control remoto, o en cualquier otra combinación. Alarmas vinculadas con alarmas virtuales, para más detalles véase Alarmas virtuales. Tiempo mín. de respuesta: ≤200ms, filtro excluido. Retardo de activ. punto de consigna: "0s". Pulso: Retransmisión de señal: Total: +kWh, -kWh, +kvarh, -kvarh. Parcial: +kWh, -kWh, +kvarh, -kvarh. Type d'impulsion: las anteriores variables pueden conectarse a cualquier salida. Peso del pulso: programable de 0,001 a 10,00 kWh/kvarh por pulso. ≥100ms < 120ms (ON), ≥120ms (OFF), según norma EN62052-31. Control remoto: la activación de las salidas se gestiona mediante el puerto de comunicación.

Salidas análogas 20mA (M O A2). Numero de salidas: 2 (WM30: máx. un módulo por equipo; WM40: máx. dos módulos por equipo). Precisión (a 25°C ±5°C, H.R. ≤60%): ±0,2%f.e. Escala: 0 a 20mA. Configuración: mediante teclado frontal. Retransmisión de señal: la salida de la señal puede conectarse a cualquier variable instantánea disponible. Factor de escala: programable en toda la escala de retransmisión; permite controlar la retransmisión de todos los valores desde 0 a 20 mACC. Tiempo de respuesta: ≤400 ms típico (filtro excluido). Ondulación: ≤1% (según normas IEC 60688-1, EN 60688-1). Variación total de temperatura: ≤500 ppm/°C. Carga: ≤600Ω.

Salidas análogas 10VCC (M O V2). Numero de salidas: 2 (WM30: máx. un módulo por equipo; WM40: máx. dos módulos por equipo). Precisión (a 25°C ±5°C, H.R. ≤60%): ±0,2%f.e. Escala: 0 a 10 VCC. Configuración: mediante el teclado frontal. Retransmisión de señal: la salida de la señal puede conectarse a cualquier variable instantánea disponible. Factor de escala: programable en toda la escala de retransmisión; permite controlar la retransmisión de todos los valores desde 0 a 10VCC. Tiempo de respuesta: ≤400 ms típico (filtro excluido). Rizado: ≤1% (según normas IEC 60688-1, EN 60688-1). Variación total de temperatura: ≤350 ppm/°C. Carga: ≥10kΩ.

Puerto RS485. Tipo: multiterminal, bidireccional. Conexiones: 2 hilos. Distancia máx: 1000m, terminación directamente en el módulo. Protocolos: MODBUS/JBUS (RTU). Protocolos: MODBUS (247 seleccionable a través del teclado frontal); BACnet MS/TP (número de instancia seleccionable por software de programación). Formato de datos: 1 bit de arranque, 8 bit de datos, sin paridad, paridad par, paridad impar,1 bit de parada. Velocidad en baudios: seleccionable: 9,6k, 19,2k, 38,4k, 115,2k bit/s. Capacidad de entrada del driver: Carga unitaria, 1/5. Máximo: 160 transceptores en el mismo bus.

Puerto RS232. Tipo: bidireccional. Conexiones: 3 hilos. Distancia máx 15m. Protocolo MODBUS RTU/JBUS. Formato de datos: 1 bit de arranque, 8 bit de datos, sin paridad, paridad par, paridad impar,1 bit de parada. Velocidad en baudios: seleccionable: 9,6k, 19,2k, 38,4k, 115,2k bit/s.

Puerto Ethernet/Internet. Protocole: Modbus TCP/IP. Configuración IP: IP estático/ Máscara de red / Gateway por defecto. Puerto: seleccionable (por defecto 502). Conexiones del cliente: Máx. 5 simultáneamente. Conexiones: RJ45 10/100 BaseTX. Distancia máx. 100m.

BACnet-IP (opcional). Protocolo: BACnet-IP (para lectura de medidas y para escribir la descripción del objeto) y Modbus TCP/IP (para lectura de medidas y parámetros de configuración). BACnet-IP, Configuración IP: P estático/ Máscara de red / Gateway por defecto. Puerto: Fijo: BAC0h. Device object dispositivo: 0 a 9999 seleccionable a través del teclado frontal 0 a 2^22-2 = 4.194.302, seleccionable a través del software de programación o mediante BACnet. Servicios sopportados: "I have", "I am", "Who has", "Who is", "Read (multiple) Property". Objetos soportados: Tipo 2 (valor analógico incluyendo propiedad COV), Tipo 5 (valor binario hasta 16 retransmisiones de alarma virtual). Tipo 8 (equipo). Configuración IP: IP estático / Máscara de red / Gateway por defecto. Puerto Modbus TCP/IP: ver "Puerto Ethernet/Internet" anterior. Conexiones del cliente: solo Modbus: Máx. 5 simultáneamente. Conexiones: RJ45 10/100 BaseTX Distancia máx. 100m.

BACnet MS/TP (opcional). Puertos disponibles: 2: RS485 y Ethernet. Puerto RS485, Tipo: multiterminal, unidireccional (variables dinámicas). Conexiones: 2 hilos. Distancia máx 1000m, Terminación directamente en el módulo. Instancia de objeto dispositivo: 0 a 9999 seleccionable a través del teclado frontal 0 a 2^22-2 = 4.194.302, seleccionable a través del software de programación o mediante BACnet. Protocolo: BACnet MS/TP (para lectura de medidas y para escribir descripciones de objetos). Servicios soportados: "I have", "I am", "Who has", "Who is", "Read (múltiple) Property". Objetos soportados: tipo 2 (valor analógico incluyendo propiedad COV), Tipo 5 (valor binario) hasta a 16 retransmisiones de alarma virtual), Tipo 8 (dispositivo). Datos (unidireccionales) dinámicos: variables del sistema y de cada fase: ver tabla "Lista de variables...". Estáticos: no disponible. Formato de datos: 1 bit de arranque, 8 bit de datos, sin paridad, 1 bit de parada. Velocidad en baudios: seleccionable: 9,6k, 19,2k, 38,4k o 76,8 kbit/s. Capacidad de entrada del driver: carga unitaria, 1/5. Máximo: 160 transceptores en el mismo bus. Direcciones MAC, seleccionable: 0 a 127. Puerto Ethernet Protocolo: Modbus TCP/IP (para configuración parámetros de programación). Configuración IP: IP estático / Máscara de red / Gateway por defecto. Puerto Modbus: seleccionable (por defecto 502). Sólo Modbus: Máx. 5 simultáneamente.

M C EI: protocolos: Ethernet/IP (para lectura de medidas) y Modbus TCP/IP (para configuración de los parámetros de programación). Configuración IP: IP estático/Máscara de red / Gateway por defecto. Puerto Modbus: seleccionable (por defecto 502). Sólo Modbus: Máx. 5 simultáneamente. RJ45 10/100 BaseTX. Distancia máx. 100m. Puerto Ethernet/IP: topología: "Star". RJ45 estándar. distancia máx. 100m. Nivel: "Commercial level". Conexión Connection establishment: target. Mensajes: clase 1 y clase 3. Funciones soportadas: ACD (Address Conflict Detection). UCMM. "List services" 0x0004. "List identity" 0x0063. "Register session" 0x0065. "Unregister session" 0x0066. "Send RR data" 0x006F. "Send unit data" 0x0070. Datos, dinámicos (sólo lectura): variables del sistema y de cada fase (BACnet-IP y Modbus): ver el documento Protocole Ethernet/IP. estáticos (lectura y escritura): todos los parámetros de configuración (sólo Modbus TCP).

Temperatura de trabajo: -25°C a +55°C (-13°F a 131°F) (H.R. de 0 a 90% sin condensación a 40°C) según normas EN62053-21, EN50470-1 y EN62053-23. **Temperatura almacenaje:** -30°C a +70°C (-22°F a 158°F) (H.R. < 90% sin condensación a 40°C) según normas EN62053-21, EN50470-1 y EN62053-23. **Conformidad con las normas:** Seguridad: IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Salida de pulso: DIN43864, IEC62053-31. **Homologaciones:** CE, cULus "Listed". **Conexiones:** a tornillo. Sección del cable: máx. 2,5 mm². Par de apriete mín./máx.: 0,4 Nm / 0,8 Nm. Par de apriete recomendado: 0,5 Nm. **Caja DIN** Dimensiones (Al. x Ac. x Pr.). Módulos "A" y "B": 89,5x63x16mm. Módulo "C": 89,5x63x20mm. Máx. profundidad tras panel Con 3 módulos (A+B+C): 81,7 mm. Material: Nylon PA66, autoextinguible: UL 94 V-0. Montaje: montaje a panel. **Grado de protección:** conexiones IP20.
