# Control

## Thank you for choosing our products

WM40 96:

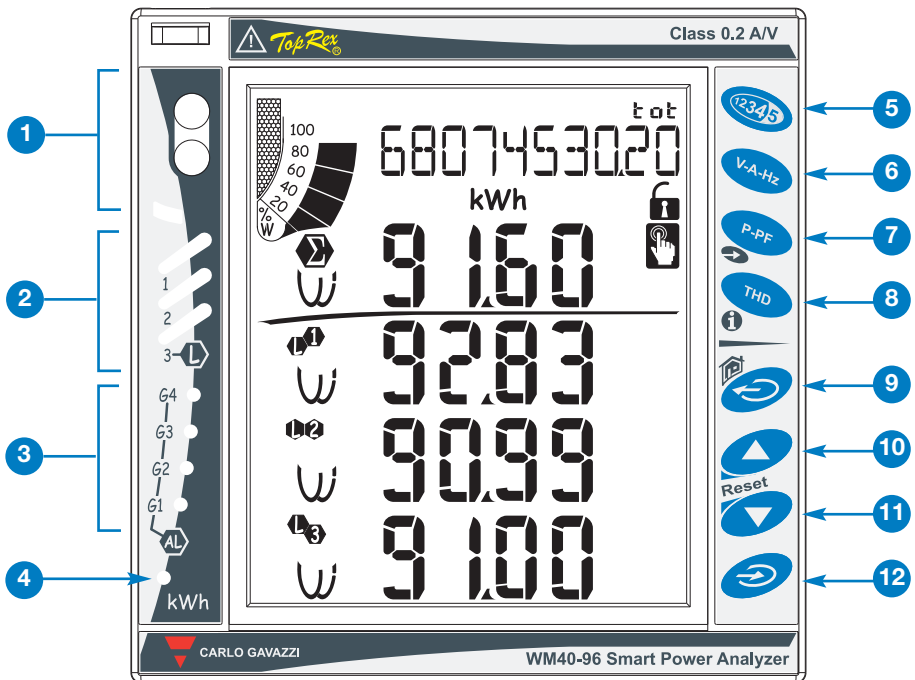

- High accuracy (class 0.2 A/V);
- High calculation performances for a fast analysis of the signal (FFT up to the 32nd harmonics);
- high connection capabilities.

WM40-96 is the state-of-the-art technological answer to your needs of power quality analysis.

Moreover, you can count on a ISO9001/VISION 2000 certified company structure, an experience of many years and a wide-spread presence both in Europe and all over the world. All this in order to guarantee the customer with a top-quality service and the best products.

Welcome in Carlo Gavazzi and our compliments for your choice. You can evaluate the complete range of our products on the CARLO GAVAZZI web-site:

[www.gavazzi-automation.com](http://www.gavazzi-automation.com)

## DESCRIPTION OF THE INSTRUMENT

- 1 Reading and programming optical port. The optical port is equipped with a detachable device for the integration of the magnetic fixing reading head.
- 2 Colour Bar-graf to show at a glance the status of the single phases L1-L2-L3.
- 3 Active virtual alarms warners.
- 4 Current energy drain indicator (kWh) by means of flashing, proportional to the measured energy (the higher the flashing frequency, the higher the energy drained. Max. frequency 16Hz pursuant to standard EN5047-1).

The keyboard is divided into two areas, the top area is dedicated to the measurements with direct access to specific visualization screens.

- 5 Visualization of the counters screens: each pressure of the button corresponds to the visualization of a screen with counters related to different energies (see the table with the measurement screens below).
- 6 Visualization of the current voltage and frequency (see the table with the measurement screens below).
- 7 Visualization of the instant  $\cos\phi$  and powers (see the table with the measurement screens below).
- 8 Visualization of the harmonics (see the table with the measurement screens below).

The keyboard in the bottom area is especially dedicated to instrument programming.

- 9 Exits the submenus, exits programming.
- 10 "Up" button, enables to browse the menus and to increase the values to be set.
- 11 "Down" button, enables to browse the menus and to decrease the values to be set.
- 12 Access to the programming menu: **hold pressed for at least 2 seconds to access the programming menu.**

**In measurement mode, buttons 8 and 9 enable to display the MAX and dmd values of the displayed variables.**

 The buttons are enhanced touch buttons. To check their actual engagement, a specific icon on the display turns on each time a button is pressed.

## ADDITIONAL FUNCTIONS OF THE BUTTONS

The buttons featuring a double icon have two functions, to access the secondary function, hold pressed for a long time the button corresponding to the desired secondary function.

 Access to the instrument information screens: reference standards, firmware version, year of manufacturing.

 "Home" button: from any measurement screen, from any menu, returns to the main measurement screen (customizable by the user). **If you are in the programming menu, any data entered is lost.**

 Holding pressed the button 10, you access the reset of the MAX of the displayed variables.  
Holding pressed button 11, you access the reset of the dmd's of the displayed variables.  
The reset must be confirmed by button 12.

 Access to the process variables (only with dedicated: M A T P, M A T P N module).

**We recommend using your forefinger to activate the touch buttons.**

## DESCRIPTION OF THE DISPLAY

- 1 Graphic bar which displays the active and the apparent power drained with relation to the installed power.
- 2 Indications of inductive phase displacement L, -L, or capacitive phase displacement C, -C.
- 3 Indication of the measurement phase-neutral L1 or phase-phase L12.
- 4 Indication of the measurement phase-neutral L2 or phase-phase L23 or of the asymmetry phase-phase VLL.
- 5 Indication of the measurement phase-neutral L3 or phase-phase L31 or of the asymmetry phase-neutral VLn.
- 6 Indication of the engineering unit and of the multiplier: k, M, V, W, A, var (VAr), PF (Pf), Hz, An.
- 7 ALR: the alarm display function is active. PROG: the programming function is active. LOG: it is active when the LOG function is enabled. EVENT: it is active when the EVENT function is enabled.
- 8 Area dedicated to the visualization of counters, text messages, date and time (format: dd.mm.yy/hh:mm). Energy counters (see table on the following screen).
- 9 Indication of: dmd, THD% or Max.
- 10 Indicates that all the instant values displayed are system values.
- 11 Phase sequence error alarm.
- 12 Instrument programming enabled.
- 13 Instrument programming disabled.
- 14 Data transmission (TX) and reception (RX), via network communication, in progress.
- 15 Gas counter (m<sup>3</sup>).
- 16 Hot water counter (m<sup>3</sup>).
- 16 + kWh, remote heating counter.
- 17 Cold water counter (m<sup>3</sup>).

## ICONS OF THE DISPLAY

ALARM SETPOINT	
Up alarm.	Down alarm.

Notes: the display is backlighted with lighting time and colour programmable from 0 minutes (always on) to 255 minutes.

02

03

## HOW TO SET THE VALUES

With WM40 the values setting is even more simple, it is possible to increase or decrease every single digit, it is possible to easily obtain the wished value or change directly from one multiplier to another one. Example: use of the menu relevant to the current ratio.

**01** During the programming phase the instrument provides useful information:

- a** recognition of the programming mode;
- b** identifier number of the menu (see also the programming flow chart);
- c** edit, identification of the line subject to set;
- d** cursor that identifies the digit subject to set;
- e** maximum and minimum limit of selectable variable.

**02** Use the keys **6** to increase and decrease the digit detected by the cursor (**d**). To set another digit move the cursor to match the wished digit using the key **4**, every key press corresponds to a left shifting of the cursor (**d**).

**03** When the last digit on the left is matched by the cursor (**d**), a further press of the key **4** allows to change the decimal point and the multiplier (**f**) (k o M), the blinking "dP" (decimal point) text (**g**) identifies that the instrument is able to do this function. To modify the decimal point position and the multiplier use the keys **6** to have the wished value.

To confirm the set value press the key **7**.  
To cancel the operation in progress and come back to the starting condition press the key **5**.  
To cancel the operation in progress and come back to the measuring "Home" page, press and keep pressing the key **5** at least 2 seconds.

Selection	Application	Note
<b>A</b>	Cost allocation	Imported energy metering
<b>B</b>	Cost control	Imported and partial energy metering and utilities
<b>C</b>	Complex cost allocation	Imported/exported energy (total and partial) and utilities
<b>D</b>	Solar	Imported and exported energy metering with some basic power analyzer function
<b>E</b>	Complex cost and power analysis	Imported/exported energy (total and partial) and power analysis
<b>F</b>	Cost and power quality analysis	Imported energy and power quality analysis
<b>G</b>	Advanced energy and power analysis for power generation	Complete energy metering and power quality analysis

### NOTE

WM40-96 is provided with the “Easy-prog” function which enables a simple, quick, clear and immediate visualization of the instrument measurements, making available only specific variables depending on the application of the instrument. The available applications are described above.

To leverage all the capacities of the instrument, select the application G which enables a complete and detailed analysis of the electric energy.

**PAY ATTENTION**  
Join or divide the modules ONLY when the WM40 is NOT power supplied.

**NOTE**

**10 CHANGE PAS:** this function allows the user to modify the PASS value with a new value (from 0 to 9999).  
**20 BACKLIGHT:** backlight time from 0 (always on) to 255 minutes.  
**30 COLOUR:** this function allows the user to select the backlight colour and the working logic. 0: no timer and backlight off. 1: timer and white backlight. 2: timer and blue backlight. 3: no timer and backlight off, when an alarm occurs it flashes from white to blue. 4: timer, white backlight, when an alarm occurs it flashes from white to blue. 5: timer, white backlight, when an alarm occurs it flashes from blue to white.  
**40 MODULES:** the WM40 96 supports either automatic (A) or manual (M) acknowledgment of the installed modules depending on the kind of module.  
**60 APPLICAT:** this function which enables a simple, quick, clear and immediate visualization of the instrument measurements, making available only specific variables (page 4/5) depending on the application of the instrument.  
**70 SYSTEM:** this function allows the user to select the type of electrical system (see relevant chapter to next page).  
**80 CT RATIO:** this

function allows the user to select the value of the CT ratio (primary/secondary ratio of the current transformer being used). Example: if the CT primary (current transformer) has a current of 300A and the secondary a current of 5A, the CT ratio corresponds to 60 (obtained using the following calculation: 300/5).  
**90 PT RATIO:** this function allows to select the value of the VT-PT ratio (primary/secondary ratio of the voltage transformer being used). Example: if the primary of the connected VT (voltage transformer/potential transformer) is 20kV and the secondary is 100V, then the VT-PT ratio corresponds to 200 (obtained carrying out the following calculation: 20000/100).  
**100 CTN RATIO:** this function allows to select the value of neutral current AT ratio (primary/secondary ratio of the used current transformer).  
**110 DMD:** This function allows the user to select the calculation method of the DMD/AVG value of the selected variable (see the box on page 10).  
**120 SET POWER:** This menu allows you to set a power value (installed power) that, in the measuring phase, will represent 100% of the graph indicator.

**130 HOME PAGE:** This function allows the user to select the variables to be displayed on first page (home page). 131 TYPE: A, you can select the variable for each row. B, you can select a preset combination of variables (see relevant chapter to next page). 136 PAGE: select a preset series of variables (see relevant chapter to next page).  
**140 FILTER:** with the digital filter it's possible to stabilize the measurements which are too instable when displaying the relevant values. 141 FILTER S: set the operating range (span) of the digital filter. The value is expressed as a % (filter to 0.0 means filter excluded). 142 FILTER CO: set the filtering coefficient of the instantaneous measures. By increasing the value, also the stability and the settling time of the measures are increased.

**Some specific menus display only if the relevant modules are installed.**

**SYSTEM menu and selection of the electrical system**

**SELECTION OF DMD CALCULATION:** 111 TYPE: 81 TYPE: select the type of calculation mode to be used for the DMD/AVG calculation FIXED: if, for example, a time interval of 15 minutes has been selected, the instrument will calculate the AVG/DMD value of the measured variable and updates its value every 15 minutes, after that resets and starts a new calculation. SLIDE: if for example a time interval of 15 minutes has been selected, the instrument calculates the AVG/DMD value and updates its value at the beginning after the first 15 values and then after every minute, thus generating a window whose width is of 15 minutes and that moves forward every minute. 112 TIME: select the time interval for the DMD/AVG calculation 113 SYNC: select the synchronization mode, that is the method that controls the calculation method of the average/demand according to the selected time.

**FIXED SELECTION:** if, for example, a time interval of 15 minutes has been selected, the instrument will calculate the AVG/DMD value of the measured variable and updates its value every 15 minutes.

Where:

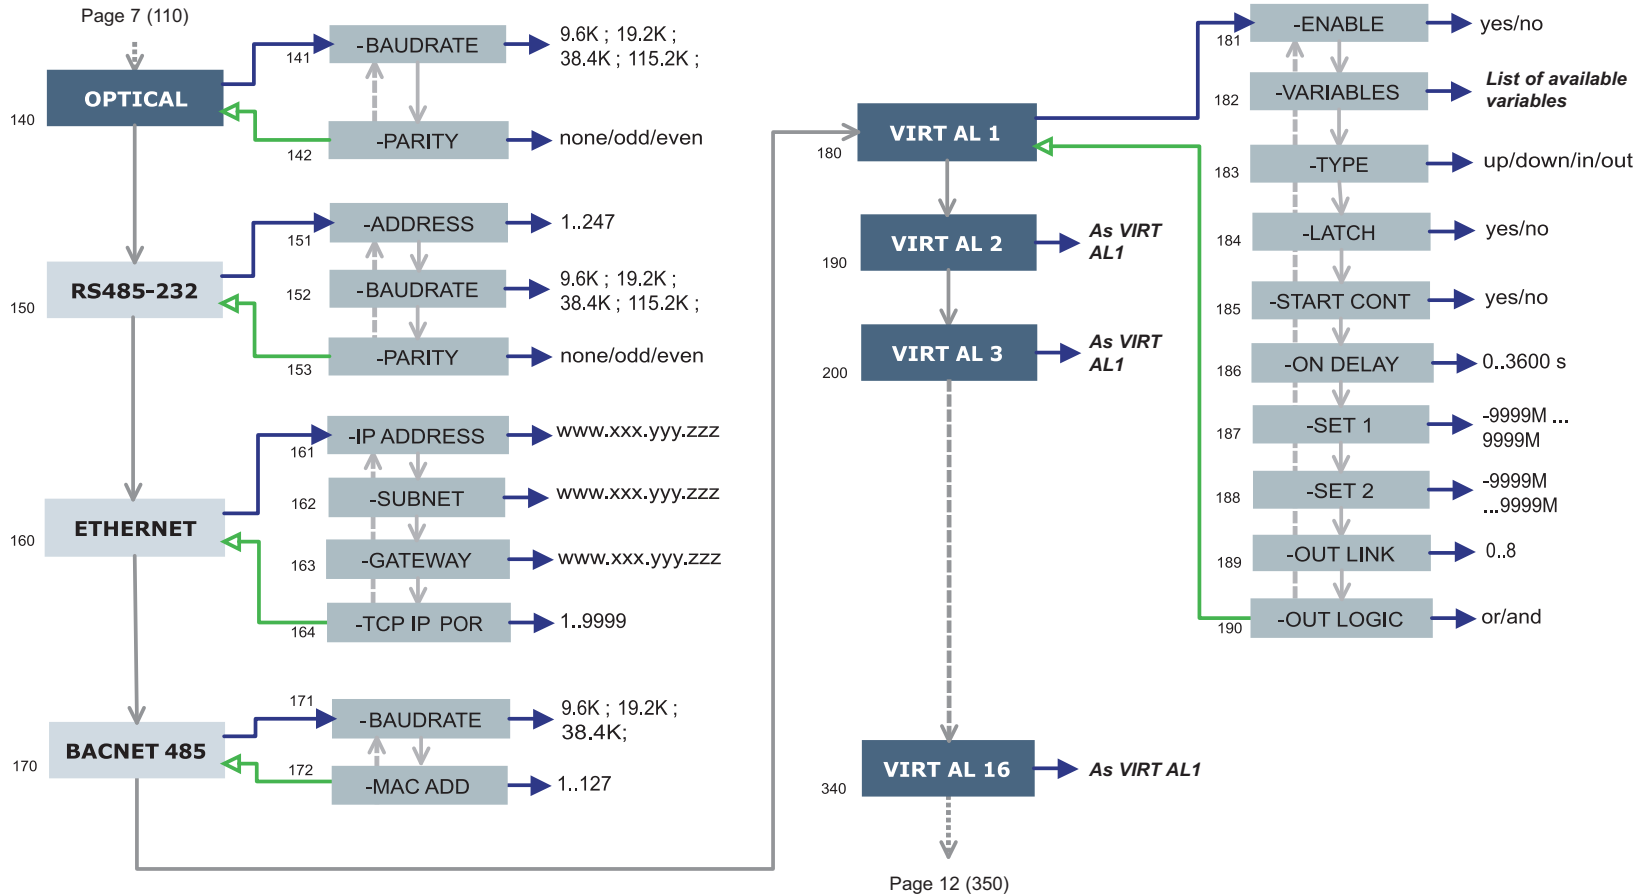

**Pmax** is the maximum power,

**Pc** is the contractual power,

**t1** is the selected time period for the calculation of the AVG/DMD value.

**SLIDING SELECTION:** if for example a time interval of 15 minutes has been selected, the instrument calculates the AVG/DMD value and updates its value at the beginning after the first 15 values and then after every minute, thus generating a window whose width is of 15 minutes and that moves forward every minute.

NOTE

**140 OPTICAL:** this function allows the user to set the communication mode of the front optical port.

**150 RS232-485:** This function allows the user to set the RS232 and RS485 serial communication ports (MC232485 module).

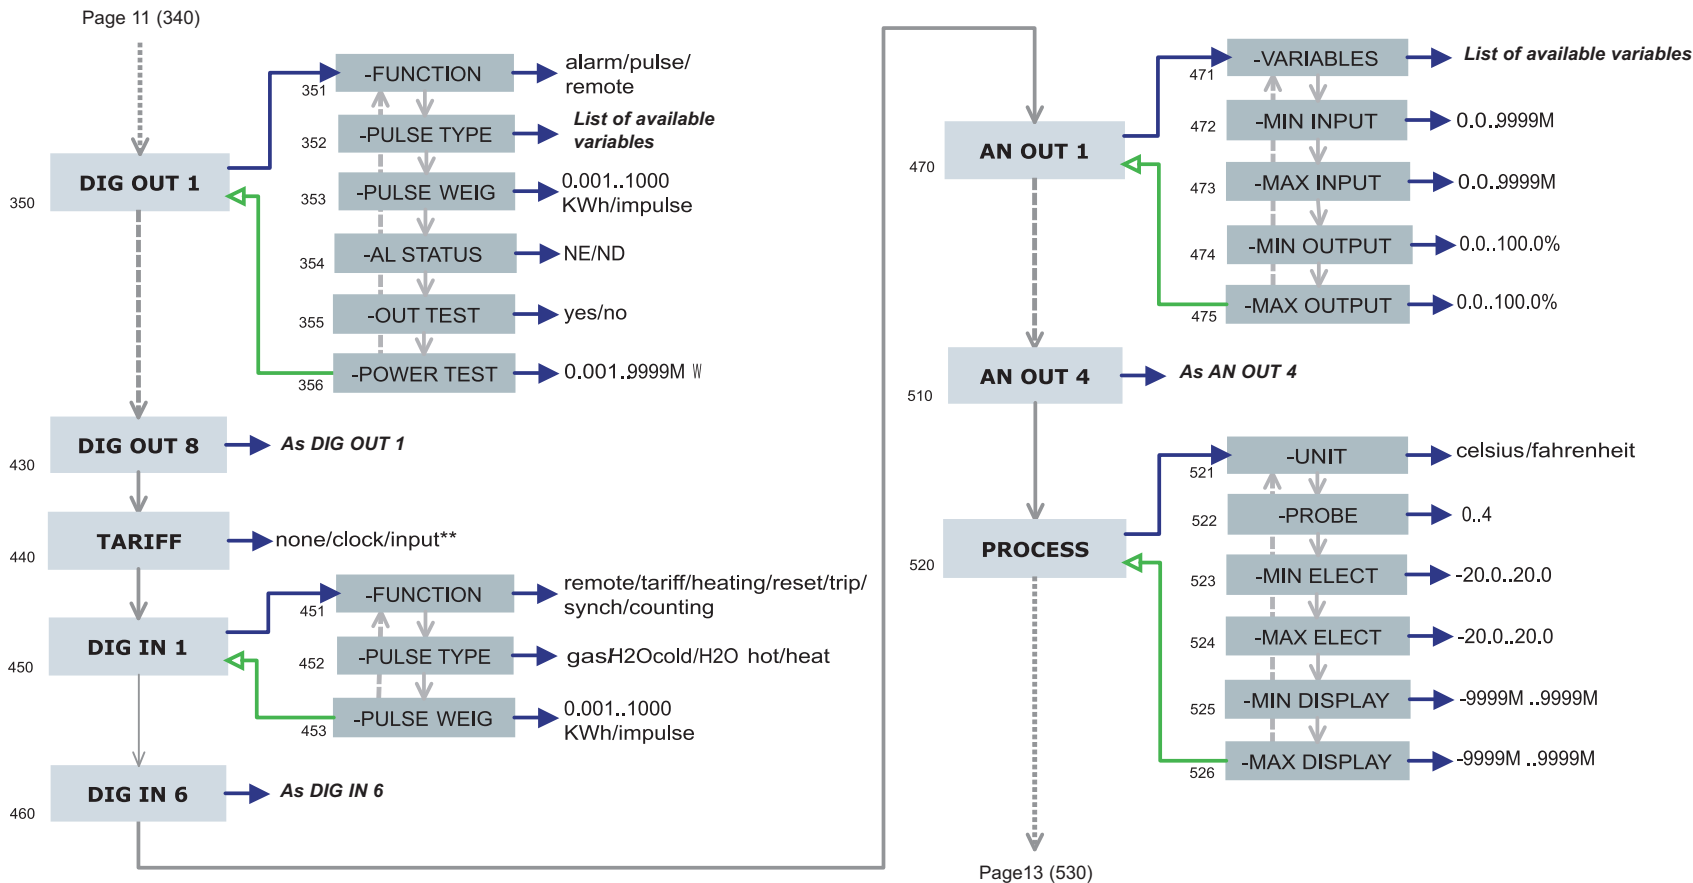

**160 ETHERNET:** This function allows the user to set the Ethernet communication port. In case of BACnet IP port, the BACnet instance number can only be programmed by WM3040Soft programming software.

**170 BACNET 485:** This function allows the user to set the BACnet MS/TP parameters. The BACnet instance number can only be programmed by WM3040Soft programming software.

**180 VIRT AL 1:** This function allows you to set the alarm parameters. 181 ENABLE: enable (YES) or disable (NO) the alarm. 182 VARIABLES: set the variable to be linked to the alarm. 183 SET 1:set the on alarm set point of

the variable. 184 SET 2: set the off alarm set point of the variable. 185 ON DELAY: set a delay on activation of the alarm.

**Some specific menus display only if the relevant modules are installed.**

**NOTE**

**350 DIG OUT 1:** This function allows to link a virtual alarm to the digital output and to its working parameters. 351 FUNCTION: *Alarm*, the digital output is enabled only if the expected alarm status occurs. *Pulse*, the measured energy is retransmitted by the digital output by means of pulses. *Remote*, the digital output can be enabled through a command sent by means of serial communication port. 352 AL LINK: select the virtual alarm to which it has to be linked. 353 AL STATUS: "ND" (normally de-energized relay) or "NE" (normally energized relay) 355 PULSE WEIG: selects the pulse weight (kWh per pulse). 356 OUT TEST: enables the TEST (YES), disables the TEST (NO). 357 POWER TEST: sets the simulated power value (kW) to which a proportional pulse sequence according to "PULSE WEIG" corresponds. The function is active until you remain within the menu and it is used when the output is connected to a PLC.

**440 TARIFF:** it allows to select the tariffs mode.

**450 DIG IN 1:** it allows to set the digital inputs parameters. 451 FUNCTION:

function type selection. 452 PULSE TYPE: it allows to set the pulse type.

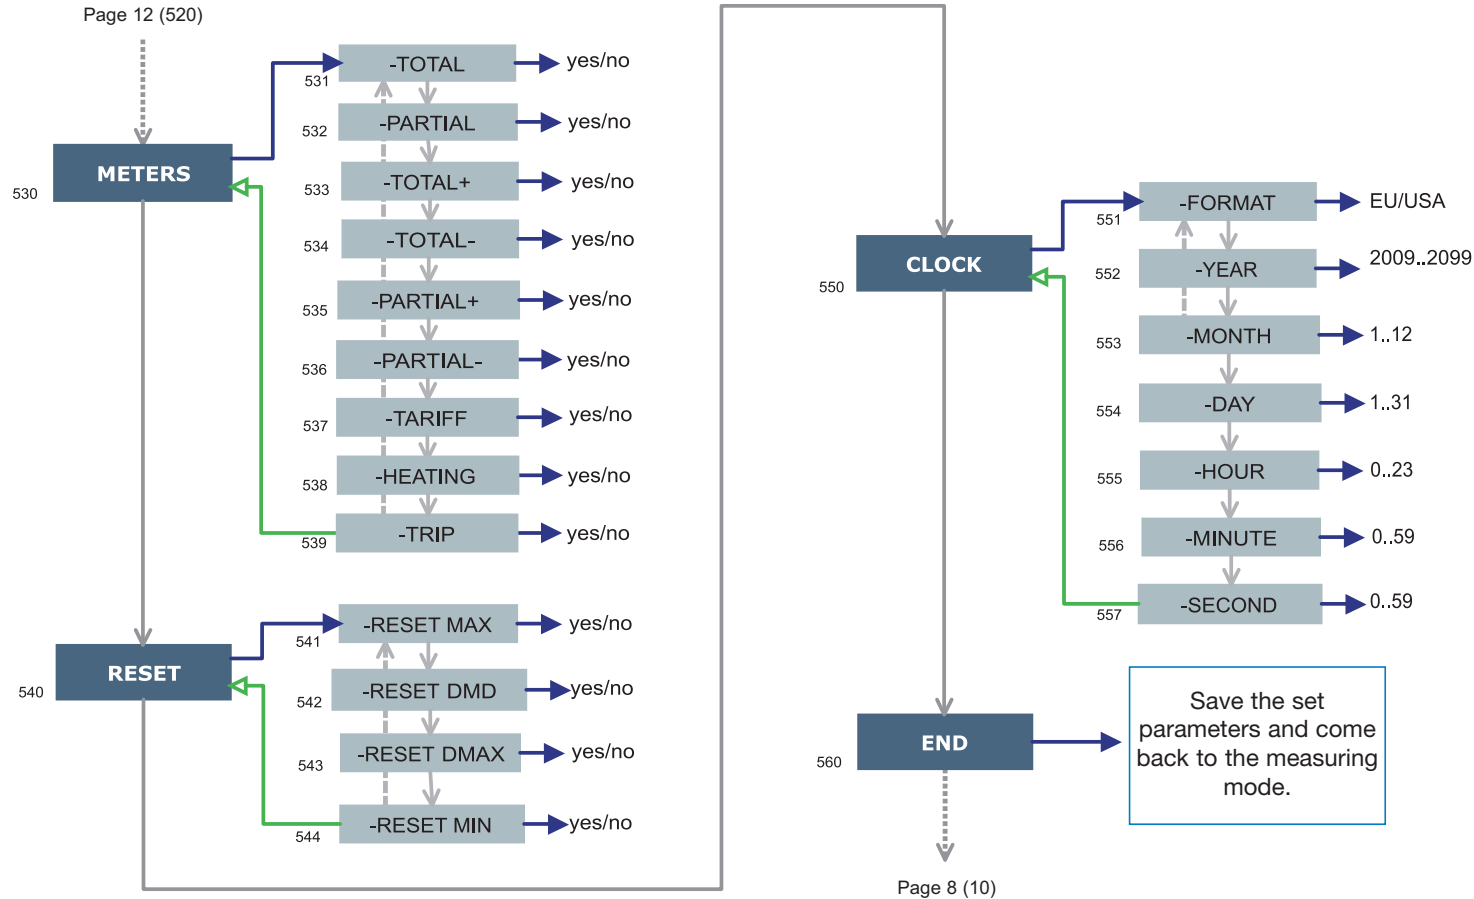

**470 AN OUT 1:** this submenu allows the programming of the analogue outputs (0-20mA, 0-10V). 471 VARIABLES: select the variable to be retransmitted by means of the analogue output. 472 MIN INPUT: minimum value of the variable input range to which the "MIN OUTPUT" value, retransmitted by the analogue output, will be linked. 473 MAX INPUT: maximum value of the variable input range to which the "MAX OUTPUT" value, retransmitted by the analogue output, will be linked. 474 MIN OUTPUT: set the value expressed as % of the output range (0-20mA, 0-10V) to be linked to the minimum measured value. 475 MAX OUTPUT: select the value expressed as % of the output range (0-20mA, 0-10V) to be linked to the maximum measured value.

**520 PROCESS:** it allows to set the process signal parameters. 521 UNIT: engineering unit selection (°C or °F). 522 PROBE: probe selection. 523

MIN ELECT: selection of electrical scale minimum value. 524 MAX ELECT: selection of electrical scale maximum value

525 MIN DISPLAY: selection of the displayed minimum value. 526 MAX DISPLAY: selection of the displayed maximum value.

**Some specific menus display only if the relevant modules are installed.**

Key-pad

Push for at least 2 s

NOTE

**530 METERS:** reset the ENERGY METERS choosing among: TOTAL, PARTIAL: resets all energy meters, both total and partial. TOTAL +: resets the total meters of imported energy. TOTAL -: resets the total meters of exported energy. PARTIAL +: resets the partial meters of imported energy. PARTIAL -: resets the partial meters of exported energy. TARIFF: tariffs counter reset. HEATING: remote heating counter reset. TRIP: errors counter reset.

**540 RESET:** carry out the reset of the MAX or dmd stored values.

**550 CLOCK, 551 FORMAT:** UE, set the European time format as 24h (00:00) or the USA set the American time format as 12h (12:00 AM/PM).

### WHAT IS THE ACTION OF THE DIGITAL FILTER PARAMETERS ON THE MEASURE?

The first filter parameter is **FILTER S** and defines the operating range of the filter. This operating range is represented as a yellow band in figure on left side (each small square is one digit). Until the measured value (red curve in figure) is within this band, the filter is active; as soon as the value is external, the filter is deactivated and a new band will be active around the new value.

The range of the fluctuation (in digit) is a good starting value for such parameters.

The suggestion to set this parameter is to look at the size of the fluctuation (in digit) and use this value.

The second parameter is **FILTER CO** and represents the filtering coefficient. The higher is **FILTER CO**, the smoother is the curve of the displayed values (black in figure). There is not a theoretical rule to define this parameter, it is to be set on the field: however a rough suggestion is to start with the same value of the **FILTER S** coefficient and then increase it until the desired stability is reached.

The digital filter affects the values retransmitted both via serial communication and analogue output.

#### DIGITAL FILTER PROGRAMMING EXAMPLES

##### Example 1

**How to stabilize the value of the VL-N variable displayed on the display, fluctuating from 222V and 228V.**

The parameters of the digital filter have to be programmed as follows:

**FILTER S:** the variable has fluctuations within the mean value whose amplitude is equal to  $\pm 0,75\%$  of the full scale rated value of the variable itself (obtained by the following calculation:  $(228-222)/2 = \pm 3V$ , then  $\pm 3 \cdot 100/400V = \pm 0,75\%$  where 400V is the phase-neutral rated value of an AV5 input). The "range" parameter, representing the action range of the digital filter, is to be programmed to a value which must be slightly higher than the percentage amplitude of the fluctuation: ex. 1.0%.

**FILTER CO:** if the new value measured by the instrument is within the action range of the filter, the new displayed value is obtained by adding algebraically the previous value to the variation divided by the filtering coefficient. As a consequence, a value higher than this coefficient implies a longer settling time and therefore a better stability. You generally obtain the best result by setting the filtering coefficient to a value equal to at least 10 times the range parameter value.

In the following example:  $1,0 \cdot 10 = 10$ , the stability of the filtering coefficient can be improved by increasing the filtering coefficient, the allowed values are included within 1 and 255.

##### Example 2

**How to stabilize the value of the displayed System Active Power (W $\Sigma$ ), fluctuating between 300kW and 320kW (the load is connected to the instrument by means of a 300/5A CT and a direct measure of the voltage).**

The parameters of the digital filter must be programmed as follows:

**FILTER S:** the variable has fluctuations within the mean value whose amplitude is equal to  $\pm 2,78\%$  of the full scale rated value of this variable. This value is obtained by the following calculation:  $(320-300)/2 = \pm 10kW$ , then  $\pm 10 \cdot 100/360kW = \pm 2,78\%$ , where 360kW is the rated value of the System Active Power of an AV5 input, at the above mentioned CT and VT ratios and obtained by means of the following formula: "VLN \* VT \* IN \* CT \* 3" where VLN = rated input voltage (400V for the AV5 input), VT = primary/secondary ratio of the voltage transformer being used, IN = rated current (5A for the AV5 type input), CT = primary/secondary ratio of the voltage transformer being used (in this example "400\*1\*5\*60\*3=360kW). The RANGE parameter, representing the digital filtering coefficient action range, is to be programmed to a value which must be slightly higher than the percentage of the fluctuation: eg. 3.0%.

**FILTER CO:** if the new value acquired by the instrument is within the filtering action range, the new displayed value is obtained by adding algebraically the previous value to the variation divided by the filtering coefficient. As a consequence, a value higher than this coefficient implies a higher settling time and therefore a better stability. Generally speaking the best result is obtained setting the filtering coefficient to a value equal to at least 10 times the value of the range parameters. In the example:  $3,0 \cdot 10 = 30$ . In order to improve the stability you can increase the filtering coefficient, the admitted values are included within 1 and 255.

##### Example 3.

**It's necessary to stabilize the value of the displayed variable AL 1 (phase current 1), fluctuating within 470V and 486V.**

To be able to manage the alarm function and activation and deactivation of the relay, this value is not to be subject to continuous fluctuations. In this example we have considered using a 500/5A CT. The parameters of the digital filter is to be programmed as follows:

**FILTER S:** the variable has fluctuations within the mean value whose amplitude is equal to  $\pm 1,60\%$  of the full scale rated value of this variable (obtained by means of the calculation:  $(486-470)/2 = \pm 8A$ , then  $\pm 8 \cdot 100/500A = \pm 1,60\%$  where 500A is the value referred to the primary of the transformer being used). The "range" parameter, which represents the action range of the digital filter, is to be programmed to a value slightly higher than the percentage amplitude of the fluctuation: for example 2.0%.

**FILTER CO:** if the new value acquired by the instrument is within the filtering action range, the new displayed value is calculated algebraically adding to the previous value the variation divided by the filtering coefficient. As a consequence, a higher value of this coefficient implies a higher settling time and therefore a better stability. Generally speaking, the best result is obtained setting the filtering coefficient at a value equal to at least 10 times the value of the range parameter. In the example:  $2,0 \cdot 10 = 20$ . To improve the stability you can increase the filtering coefficient, the admitted values are within 1 and 255.

## PROGRAMMING EXAMPLES OF THE ANALOGUE OUTPUTS

**Power retransmission by means of a 0-20mA analogue output.**

It's necessary to measure a consumed power up to 100kW and retransmit this value by means of a signal from 4 to 20 mA: the module to be used is MOV2 (2x from 0 to 20mA), the instrument is to be programmed as follows:

**VARIABLE:**  $W\Sigma$  (system active power).

**MIN OUT:** 20.0% means 4 mA. The calculation to be carried out is the following:  $(100 \cdot \text{minimum output}) / \text{fullscale output} = 100 \cdot 4\text{mA} / 20\text{mA} = 20\%$ .

**MAX OUT:** 100.0% means 20mA. The calculation to be carried out is:  $(100 \cdot \text{maximum output}) / \text{fullscale output} = 100 \cdot 20\text{mA} / 20\text{mA} = 100$ .

**MIN INPUT:** 0,0k; the multiple k, M, G can be selected on the instrument according to the chosen VT and CT values.

**MAX INPUT:** 100.0k; the k, M, G multiples can be selected on the instrument according to the selected VT and CT values.

**Retransmission of the POWER FACTOR (PF) by means of the 0-20mA analog output.**

It's necessary to retransmit the whole range of the allowed values for the PF with a signal from 0 to 20mA. Particular attention must be paid to the value of the PF variable which may vary from C0,001 and L0,000 (for each phase): these values will be retransmitted and will then correspond to 0 and 20 mA. When the PF will have a value equal to 1, being in the middle between C0,001 and L0,000, the value of the output will correspond to the middle of the scale, that is 10mA. As a consequence, the instrument will have to be programmed as follows:

**VARIABLE:** PF L1 (or L2 or L3 or  $PF\Sigma$ ).

**MIN OUT:** 0,0%.

**MAX OUT:** 100,0%.

**MIN INPUT:** C0,001 (the C symbol shows a CAPACITIVE value).

**MAX INPUT:** L0,001 (the L symbol shows an INDUCTIVE value). L0,001 has been chosen as minimum value to be set in order to avoid any undesirable swifiting of the repeated outputs.

EXAMPLE OF ALARM PARAMETERS PROGRAMMING

It is required the disconnection of a load when a set value of absorbed power occurs. For example when 300kW are exceeded, the alarm occurs and the set load is disconnected.

An "UP" alarm is selected, below you'll find the recommended programming:

**ENABLE:** YES

**VARIABLES:** W system ( $W\Sigma$ )

**SET POINT 1:** 300kW

**SET POINT 2:** 295kW

**ON DELAY:** set the desired number of seconds: "5 seconds".

## Instruction Manual Base Instrument

Thank you  
for choosing our products.

Grazie  
per aver scelto i nostri prodotti.

Wir danken  
Ihnen dafür, dass Sie unsere  
Produkte gewählt haben.

Gracias  
por elegir nuestros productos.

Merci  
d'avoir choisi nos produits.

### ENGLISH

**Read carefully the instruction manual.** If the instrument is used in a manner not specified by the producer, the protection provided by the instrument may be impaired. **Maintenance:** make sure that the connections are correctly carried out in order to avoid any malfunctioning or damage to the instrument. To keep the instrument clean, use a slightly damp cloth; do not use any abrasives or solvents. We recommend to disconnect the instrument before cleaning it.

**WARNING:** to make sure that the screw tightening torque is 0.5Nm. ALL THE MOUNTING AND DISASSEMBLY OPERATIONS OF THE INSTRUMENT AND MODULES HAVE TO OCCUR WHEN POWER SUPPLY AND THE LOADS ARE NOT CONNECTED.

**Preliminary operations:** if necessary remove the protection cover of the contacts [A], using a properly screwdriver.

**Lock the programming and LED of power supply on:** to lock the acces to the programming of the instrument turning (clockwise) the rotary switch [B] to position 7. To unlock the programming come-back the rotary switch to the position 1. The green LED [C] on warns that the instrument is power supplied.

**The instrument and modules sealing:** to lock the modules turning (clockwise) the property fixing elements on the corners [E], using a properly screwdriver [F]. To seal the instrument use the dedicated covers and holes [D]. Bracket tightening torque: 0,4 Nm max [G].

- [15] Power supply 90 to 260VAC/DC. F=250V [T] 630mA.  
Power supply 18 to 60VAC/DC. F=250V [T] 3.15A.

### ITALIANO

**Leggere attentamente il manuale di istruzioni.** Qualora l'apparecchio venisse adoperato in un modo non specificato dal costruttore, la protezione prevista dall'apparecchio potrebbe essere compromessa. **Manutenzione:** Per mantenere pulito lo strumento usare un panno inumidito; non usare abrasivi o solventi. Si consiglia di scollegare lo strumento prima di eseguire la pulizia.

**ATTENZIONE:** assicurarsi che la coppia di serraggio applicata alle viti dei morsetti sia di: 0,5Nm. TUTTE LE OPERAZIONI DI MONTAGGIO E SMONTAGGIO DELLO STRUMENTO E DEI MODULI VANNO ESEGUITE CON ALIMENTAZIONE E CARICO SCOLLEGATI.

**Operazione preliminare:** smontare, se necessario, la finestra di protezione dei contatti [A], utilizzando un apposito cacciavite a taglio.

**Blocco della programmazione e LED di presenza alimentazione:** per bloccare la programmazione dello strumento agire (ruotandolo in senso orario) sul commutatore rotante [B] portandolo nella posizione 7, per sbloccare la programmazione portarlo nella posizione 1. Il LED verde acceso [C] avvisa che lo strumento è alimentato.

**Sigillatura dei moduli e dello strumento:** per bloccare i moduli agire (ruotandoli in senso orario) sugli appositi elementi di fissaggio posti agli angoli dei moduli stessi [E], utilizzando un adeguato cacciavite a taglio [F]. Il sigillo va apposto utilizzando i fori e i copri morsetti dedicati [D]. Coppia di serraggio delle staffe: 0,4 Nm max [G].

### ■ COLLEGAMENTI ELETTRICI

- [1] 3 fasi, 2 fili, carico equilibrato, connessione con 1 TA
- [2] 3 fasi, 2 fili, carico equilibrato, connessione con 1TA e 1 VT
- [3] 3 fasi, 4 fili, carico squilibrato, connessione con 3 TA
- [4] 3 fasi, 4 fili, carico squilibrato, connessione con 3 TA e 3 TV
- [5] 3 fasi, 3 fili, carico squilibrato, connessione con 3 TA
- [6] 3 fasi, 3 fili, carico squilibrato, connessione con 3 TA e 2 TV
- [7] 3 fasi, 3 fili, carico equilibrato, connessione con 1 TA
- [8] 3 fasi, 3 fili, carico squilibrato, connessione con 2 TV (ARON)
- [9] 3 fasi, 3 fili, carico equilibrato, connessione con 1 TA e 2 TV
- [10] 2 fasi, 3 fili, connessioni con 2 TA
- [11] 2 fasi, 3 fili, connessioni con 2 TA e 2 VT
- [12] 1 fase, 2 fili, connessione con 1TA
- [13] 1 fase, 2 fili, connessione con 1 TA e 1 VT
- [14] 3 fasi, 3 fili, carico squilibrato, connessione con 2 TA e 2 TV (ARON)
- [15] Alimentazione da 90 a 260VCA/CC. F=250V [T] 630mA.  
Alimentazione da 18 a 60VCA/CC. F=250V [T] 3.15A.

### DEUTSCH

**Die Betriebsanleitung aufmerksam lesen.** Sollte das Gerät nicht gemäss der Herstellerangaben verwendet werden, könnte der vom Gerät vorgesehene Schutz beeinträchtigt werden. **Wartung:** Das Gerät mit einem feuchten Tuch reinigen; keine Scheuer- oder Lösemittel verwenden. Das Gerät vor der Reinigung ausschalten **ACHTUNG:** Darauf achten, dass das Anzugsmoment der Klemmschrauben 0,5Nm beträgt. SOWOHL BEI DER MONTAGE, ALS AUCH BEIM AUSBAU DES GERÄTES UND DER MODULE MÜSSEN STROMVERSORGUNG UND STROMLAST STETS VORHER ABGETRENNT WERDEN.

**Vorbereitung:** Gegebenenfalls das Schutzfenster der Kontakte [A] mit einem Schlitzschraubenzieher entfernen.

**Programmierungssperre und LED Stromversorgung vorhanden:** Um die Programmierung des Gerätes zu sperren, den Drehschalter [B] im Uhrzeigersinn auf Position 7 drehen, für die erneute Freigabe auf Position 1. Das Leuchten der grünen LED [C] zeigt an, dass das Gerät mit Strom versorgt wird.

**Versiegelung der Module und des Geräts:** Die Befestigung der Module erfolgt (durch Drehen derselben im Uhrzeigersinn) über die an den Ecken vorgesehenen Befestigungselemente [E], mit Hilfe eines passenden Schlitzschraubenziehers [F]. Das Siegel wird über die hierfür vorgesehenen Löcher und Klemmendeckel [D] angebracht. Befestigungsbügel Anzugsmoment: max 0,4 Nm [G].

### ■ ELEKTRISCHE ANSCHLÜSSE

- [14] 3 Phasen, 3 Adern, unsymmetrische Last, Anschluss mit 2 TA und 2 TV (ARON)
- [15] Stromversorgung von 90 bis 260 VAC/DC. F=250V [T] 630mA.  
Stromversorgung von 18 bis 60 VAC/DC. F=250V [T] 3.15A.

### FRANÇAIS

**Lire attentivement le manuel de l'utilisateur.** Si l'appareil est utilisé dans des conditions différentes de celles spécifiées par le fabricant, le niveau de protection prévu par l'instrument peut être compromis. **Entretien:** Pour nettoyer l'instrument, utiliser un chiffon humide; ne pas utiliser d'abrasifs ou de solvants. Il faut déconnecter le dispositif avant de procéder au nettoyage.

**ATTENTION:** s'assurer que le couple de serrage appliqué aux vis des bornes soit de: 0,5Nm. POUR TOUTES LES OPÉRATIONS DE MONTAGE ET DÉMONTAGE DE L'INSTRUMENT ET DES MODULES IL FAUT QUE L'ALIMENTATION ET LA CHARGE SOIENT DÉBRANCHÉES.

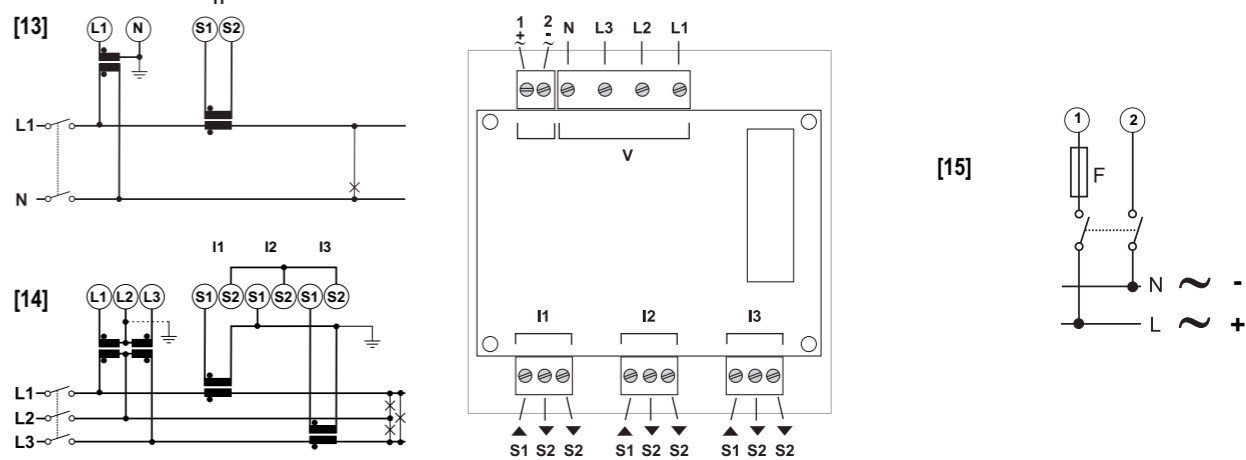

**Opération préliminaire:** démonter, si nécessaire, la fenêtre de protection des contacts [A], en utilisant un tournevis plat approprié.

**Bloque de la programmation et LED pour la présence d'alimentation:** pour bloquer la programmation de l'instrument, agir (en le tournant dans le sens des aiguilles d'une montre) sur le commutateur rotatif [B] en le mettant sur la position 7, pour débloquent la programmation, le mettre sur la position 1. Le LED vert allumé [C] signale que l'instrument est alimenté.

**Sceller les modules et l'instrument:** pour bloquer les modules, agir (en les tournant dans le sens des aiguilles d'une montre) sur les éléments de fixation prévus à cet effet, situés aux angles des modules mêmes [E], en utilisant un tournevis plat adéquat [F]. Le sceau doit être posé en utilisant les trous et les couvre-bornes prévus pour à cet effet [D]. Couple de serrage des vis de l'étrier de maintien: 0,4 Nm max [G].

### ■ BRANCHEMENTS ÉLECTRIQUES

- [1] 3 phases, 2 fils, charge équilibrée, connexion avec 1 TA
- [2] 3 phases, 2 fils, charge équilibrée, connexion avec 1TA et 1 VT

- [14] 3 phases, 3 fils, charge déséquilibrée, connexion avec 2 TA et 2 TV (ARON)
- [15] Alimentation de 90 à 260VCA/CC. F=250V [T] 630mA.

Alimentation de 18 à 60VCA/CC. F=250V [T] 3.15A.

### ESPAÑOL

**Lea atentamente el manual de instrucciones.** Si el instrumento se usa de modo distinto al indicado por el fabricante, la protección de seguridad ofrecida por el instrumento podrá resultar dañada. **Mantenimiento:** para limpiar el equipo utilizar siempre un trapo ligeramente humedecido, nunca productos abrasivos o disolventes. Se recomienda desconectar siempre el instrumento antes de limpiarlo.

**ATENCIÓN:** asegúrese de que el par de apriete aplicado a los tornillos sea de: 0,5Nm. TODAS LAS OPERACIONES DE MONTAJE Y DESMONTAJE DEL INSTRUMENTO Y DE LOS MÓDULOS DEBE REALIZARSE CON LA ALIMENTACIÓN Y LA CARGA DESCONECTADAS.

**Operación preliminar:** desmonte, si lo necesita, la ventana de protección de los contactos [A], utilizando su propio destornillador de punta plana.

**Bloqueo de la programación y LED de alimentación ON:** para bloquear la programación del instrumento gire en el sentido de las agujas del reloj el conmutador giratorio [B] llevándolo a la posición 7, para desbloquear la programación llévelo a la posición 1. El LED verde encendido [C] indica que el instrumento está alimentado.

**Sellado de los módulos y del instrumento:** para bloquear los módulos gire en el sentido de las agujas del reloj los específicos elementos de fijación de los extremos de los módulos [E], utilizando un adecuado destornillador de punta plana [F]. Para sellar el equipo use las cubiertas y orificios específicos [D]. Par de apriete del soporte: 0,4 Nm máx [G].

**Instruction Manual  
Modules for WM20/WM30/WM40**

Thank you  
for choosing our products.

Grazie  
per aver scelto i nostri prodotti.

Wir danken  
Ihnen dafür, dass Sie unsere Produkte gewählt  
haben.

Gracias  
por elegir nuestros productos.

Merci  
d'avoir choisi nos produits.

**ENGLISH**

**Read carefully the instruction manual.** If the instrument is used in a manner not specified by the producer, the protection provided by the instrument may be impaired. **Maintenance:** make sure that the connections are correctly carried out in order to avoid any malfunctioning or damage to the instrument. To keep the instrument clean, use a slightly damp cloth; do not use any abrasives or solvents. We recommend to disconnect the instrument before cleaning it.

**WARNING:** it allows to mount a maximum of 3 modules in total. To avoid any damage respect the position of the modules as shown on table 1. To make sure that the screw tightening torque is 0.5Nm. ALL THE MOUNTING AND DISASSEMBLY OPERATIONS OF THE INSTRUMENT AND MODULES HAVE TO OCCUR WHEN POWER SUPPLY AND THE LOADS ARE NOT CONNECTED.

**■ WIRING DIAGRAMS**

- [1] 2 static opto-mosfet outputs (only one module per meter).
- [2] 2 relays outputs (only one module per meter).
- [3] 2 analogue outputs 20mA DC (max 2 modules per meter).
- [4] 2 analogue outputs 10V DC (max 2 modules per meter).
- [5] RS485 serial port (only one module per meter). **IMPORTANT:** additional devices provided with RS485 are connected in parallel. The termination of the serial output is carried out only on the last instrument of the network, by means of a jumper between B+ and T.

[6] RS232 serial port (only one module per meter). **IMPORTANT:** the termination must be done by means of a jumper between B+ and T.

**A:** the communication RS232 and RS485 ports **can't be** connected and used simultaneously. **MC BAC MS module is only supplied with RS485.**

[7] Connect the Ethernet or BACnet modules using the RJ45 connector.

[G] The communication modules are provided with LED indicating the communication status RX or TX.

**Preliminary operations:** remove the protection cover of the contacts [D], using a properly screwdriver.

**Lock and sealing the modules:** to lock the modules turning (clockwise) the properly fixing elements on the corners [E], [F], using a properly screwdriver [H]. To seal the instrument use the dedicated holes [F].

**ITALIANO**

**Leggere attentamente il manuale di istruzioni.** Qualora l'apparecchio venisse adoperato in un modo non specificato dal costruttore, la protezione prevista dall'apparecchio potrebbe essere compromessa. **Manutenzione:** Per mantenere pulito lo strumento usare un panno inumidito; non usare abrasivi o solventi. Si consiglia di scollegare lo strumento prima di eseguire la pulizia.

**ATTENZIONE:** è possibile montare un massimo di tre moduli in totale. Per evitare malfunzionamenti rispettare la posizione dei moduli come indicato dalla tabella 1. Porre attenzione alla coppia di serraggio applicata alle viti dei morsetti che sia di: 0,5Nm. TUTTE LE OPERAZIONI DI MONTAGGIO E SMONTAGGIO DELLO STRUMENTO E DEI MODULI VANNO ESEGUITO CON ALIMENTAZIONE E CARICO SCOLLEGATI.

**■ COLLEGAMENTI ELETTRICI**

- [1] Doppia uscita statica a opto-mosfet (solo un modulo per contatore).
- [2] Doppia uscita a relé (solo un modulo per contatore).
- [3] Doppia uscita analogica a 20mA CC (max 2 moduli per contatore).
- [4] Doppia uscita analogica a 10V CC (max 2 moduli per contatore).

[5] Uscita porte seriali RS485 (solo un modulo per contatore). **IMPORTANTE:** ulteriori strumenti provvisti di RS485 sono collegati in parallelo. La terminazione dell'uscita seriale dev'essere eseguita solo sull'ultimo strumento della rete mediante un ponticello tra i morsetti B+ e T.

[6] Uscita porte seriali RS232 (solo un modulo per contatore). **IMPORTANTE:** eseguire la terminazione mediante un ponticello tra i morsetti B+ e T.

**A:** le porte di comunicazione RS232 e RS485 **non possono** essere usate e connesse insieme. **Il modulo MC BAC MS è provvisto della sola porta RS485.**

[7] Collegare i moduli con uscita Ethernet o BACnet utilizzare l'apposito conettore RJ45.

[G] Il modulo di comunicazione è provvisto di appositi LED segnalanti lo stato di comunicazione RX o TX.

**Operazione preliminare:** smontare la finestra di protezione dei contatti [D], utilizzando un apposito cacciavite a taglio.

**Bloccaggio e sigillatura dei moduli:** per bloccare i moduli agire sugli appositi elementi di fissaggio posti agli angoli dei moduli stessi [F], [E], utilizzando un adeguato cacciavite a taglio [H]. Il sigillo va apposto utilizzando i fori dedicati [F].

**DEUTSCH**

**Die Betriebsanleitung aufmerksam lesen.** Sollte das Gerät nicht gemäss der Herstellerangaben verwendet werden, könnte der vom Gerät vorgesehene Schutz beeinträchtigt werden. **Wartung:** Das Gerät mit einem feuchten Tuch reinigen; keine Scheuer- oder Lösemittel verwenden. Das Gerät vor der Reinigung ausschalten.

**ACHTUNG:** insgesamt können maximal drei Module montiert werden. Um Störungen zu vermeiden, sollte die Position der Module gemäß Tabelle 1 eingehalten werden. Außerdem ist darauf zu achten, dass das Anzugsmoment der Klemmschrauben 0,5Nm beträgt. SOWOHL BEI DER MONTAGE, ALS AUCH BEIM AUSBAU DES GERÄTES UND DER MODULE MÜSSEN STROMVERSORGUNG UND STROMLAST STETS VORHER ABGETRENNT WERDEN.

**■ ELEKTRISCHE ANSCHLÜSSE**

- [1] Doppelter statischer Ausgang Opto-mosfet (nur ein Modul pro Zähler).
- [2] Doppelter Ausgang Relais (nur ein Modul pro Zähler).
- [3] Doppelter analoger Ausgang 20mA DC (max 2 Module pro Zähler).
- [4] Doppelter analoger Ausgang 10V DC (max 2 Module pro Zähler).
- [5] Ausgang serielle RS485-Anschlüsse (nur ein Modul pro Zähler). **WICHTIG:** Weitere mit RS485 ausgestattete Geräte sind parallel angeschlossen. Der Endverschluss des seriellen Ausgangs darf nur am letzten Gerät des Netzes mit einer Überbrückung zwischen den Klemmen B+ und T durchgeführt werden.
- [6] Ausgang serielle RS232-Anschlüsse (nur ein Modul pro Zähler). **WICHTIG:** Der Endverschluss muss mit einer Überbrückung zwischen den Klemmen B+ und T durchgeführt werden.

**A:** Die Kommunikationsanschlüsse RS232 und RS485 können nicht gemeinsam verwendet und angeschlossen werden. **Das MC BAC MS Modul wird nur mit RS485 geliefert.**

[7] Für den ANSCHLUSS der Module an den Ethernet- oder BACnet Ausgang den dafür vorgesehenen RJ45-Stecker verwenden.

[G] Das Kommunikationsmodul ist mit entsprechenden LED ausgestattet, die den Kommunikationsstatus RX oder TX anzeigen.

**Vorbereitung:** Das Schutzfenster der Kontakte [D] mit einem Schlitzschraubenzieher entfernen.

**Befestigung und Versiegelung der Module:** Die Befestigung der Module erfolgt über die an den Ecken derselben vorgesehenen Befestigungselemente [F], [E], mit Hilfe eines passenden Schlitzschraubenziehers [H]. Das Siegel wird über die hierfür vorgesehenen Löcher [F] angebracht.

**FRANÇAIS**

**Lire attentivement le manuel de l'utilisateur.** Si l'appareil est utilisé dans des conditions différentes de celles spécifiées par le fabricant, le niveau de protection prévu par l'instrument peut être compromis.

**Entretien:** Pour nettoyer l'instrument, utiliser un chiffon humide; ne pas utiliser d'abrasifs ou de solvants. Il faut déconnecter le dispositif avant de procéder au nettoyage.

**ATTENTION:** il est possible de monter un maximum de trois modules au total. Afin d'éviter les dysfonctionnements, respecter la position des modules comme l'indique le tableau 1. Faire attention à ce que le couple de serrage appliqué aux vis des bornes soit de : 0,5Nm. POUR TOUTES LES OPÉRATIONS DE MONTAGE ET DÉMONTAGE DE L'INSTRUMENT ET DES MODULES IL FAUT QUE L'ALIMENTATION ET LA CHARGE SOIENT DÉBRANCHÉES.

**■ BRANCHEMENTS ÉLECTRIQUES**

- [1] Double sortie statique à opto-mosfet (un seul module par compteur).
- [2] Double sortie à relais (un seul module par compteur).
- [3] Double sortie analogique à 20mA CC (max 2 modules par compteur).
- [4] Double sortie analogique à 10V CC (max 2 modules par compteur).
- [5] Sortie ports série RS485 (un seul module par compteur). **IMPORTANT:** d'autres instruments pourvus de RS485 sont branchés en parallèle. La terminaison de la sortie série doit se faire uniquement sur le dernier instrument du réseau au moyen d'un cavalier entre les bornes B+ et T.
- [6] Sortie ports série RS232 (un seul module par compteur). **IMPORTANT:** procéder à la terminaison au moyen d'un cavalier entre les bornes B+ et T.

**A:** les ports de communication RS232 et RS485 ne peuvent pas être utilisés et branchés ensemble. **Le module MC BAC MS est fourni uniquement avec RS485.**

[7] Brancher les modules avec sortie Ethernet ou BACnet utiliser le connecteur RJ45 prévu à cet effet.

[G] Le module de communication est pourvu de LED spécifiques qui signalent l'état de communication RX ou TX.

**Opération préliminaire:** démonter la fenêtre de protection des contacts [D], en utilisant un tournevis plat approprié.

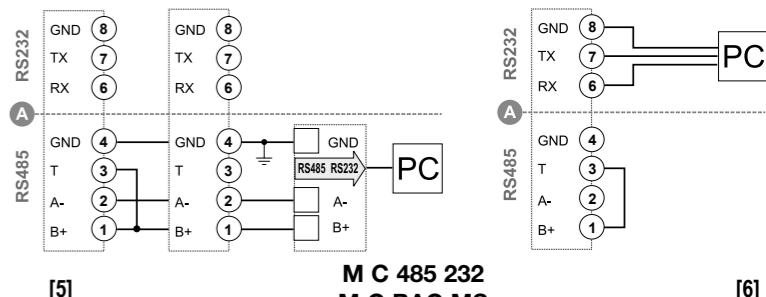

**Bloquer et sceller les modules:** pour bloquer les modules, agir sur les éléments de fixation prévus à cet effet, situés aux angles des modules mêmes [F], [E], en utilisant un tournevis plat approprié [H]. Poser le sceau en utilisant les trous spécifiques prévus [F].

**ESPAÑOL**

**Lea atentamente el manual de instrucciones.** Si el instrumento se usa de modo distinto al indicado por el fabricante, la protección de seguridad ofrecida por el instrumento podrá resultar dañada.

**Mantenimiento:** para limpiar el equipo utilizar siempre un trapo ligeramente humedecido, nunca productos abrasivos o disolventes. Se recomienda desconectar siempre el instrumento antes de limpiarlo.

**ATENCIÓN:** es posible montar un total máximo de tres módulos. Para evitar daños respete la posición de los módulos tal como se indica en la tabla 1. Ponga cuidado en que el par de apriete aplicado sea de: 0,5Nm. TODAS LAS OPERACIONES DE MONTAJE Y DESMONTAJE DEL INSTRUMENTO Y DE LOS MÓDULOS DEBE REALIZARSE CON LA ALIMENTACIÓN Y LA CARGA DESCONECTADAS.

**■ CONEXIONES ELÉCTRICAS**

- [1] Doble salida estática opto-mosfet (sólo un módulo por medidor).
- [2] Doble salida de relé (sólo un módulo por medidor).
- [3] Doble salida analógica de 20mA CC (máximo de 2 módulos por medidor).
- [4] Doble salida analógica de 10V CC (máximo de 2 módulos por medidor).
- [5] Salida de puerto serie RS485 (sólo un módulo por medidor). **IMPORTANTE:** Instrumentos adicionales dotados de RS485 se conectan en paralelo. La terminación de la salida serie sólo debe realizarse en el último instrumento de la red mediante un puente entre B+ y T.
- [6] Salida de puerto serie RS232 (sólo un módulo por medidor). **IMPORTANTE:**

## ENGLISH

**Relay Outputs (M F I6 R4)**: physical outputs 4 (max. one module per instrument). Purpose, for either pulse output or alarm output. Type Relay, SPST type, AC 1-5A @ 250VAC; AC 15-1A @ 250VAC. **Digital inputs**. Number of inputs: 6 (voltage-free contacts). Purpose: contact status reading. "dmd" measurements synchronisation and clock synchronisation. Energy tariff selection. Utility meter counters. Trip counter. Alarms resets. Interfacing with watt-hour meters (+kWh, +kvarh, -kWh, -kvarh). Input frequency: 20Hz max, duty cycle 50%. Prescaler adjustment: from 0.1 to 999.9 m3 or kWh/pulse. Open contact voltage: ≤3,3. Contact meas. current: <1mADC. Input impedance 680Ω. Contact resistance: ≤300Ω closed contact ≥50kΩ open contact.

**Static Outputs (M F I6 O6)**: physical outputs: 6 (max. one module per instrument). Purpose: for either pulse output or alarm output. Type of outputs Opto-Mos. Signal: VON: 2.5VDC max.100mA; VOFF: 42 VDC. Pulse type, programmable from 0.001 to 10.00 kWh/kvarh per pulse. Outputs connectable to the energy meters (kWh/kvarh). Pulse duration: ≥100ms <120msec (ON), ≥120ms (OFF), according to EN62052-31. **Digital Inputs**: as digital inputs of M F I6 R4.

**Temperature and Process signal inputs (M A T P)**: Temperature signal. Number of inputs: 1. Accuracy: (Display + RS485) ±(0.5%RDG+5DGT). Temperature drift: ≤150ppm/°C. Temperature probe: Pt100, Pt1000. Number of wires: 2 or 3-wire connection. Wire compensation: up to 10Ω. Engineering unit: selectable °C o °F. Process signal. Number of inputs: 1. Accuracy: (Display + RS485) ±(0.2%RDG+2DGT) da 0% a 25% FS; ±(0,1%RDG+2DGT) da 25% a 110% FS. Temperature drift: ≤150ppm/°C. Process signal input -20mA to +20mADC. Signal overload: Continuous: 50mADC. For 1 s.: 150mADC. Input impedance: <12Ω. Min. and Max. indication: -9999 to +9999 fully programmable scaling with decimal point positioning.

**Module with true neutral input (M A T P)**: In: 1A. Accuracy: (Display + RS485); from 0.01In to 0.05In: ±(0,5% RDG +2DGT); from 0.05In to 1.2In: ±(0,2% RDG +2DGT). Temperature drift: ≤150ppm/°C. Measuring input type: to be connected to external current transformer. Transformer ratio: up to 10kA (10,000 max). Crest factor: ≤3 (3A max. peak). Current Overloads. Continuous: 1.2A, @ 50Hz. For 500ms: 10A, @ 50Hz. Input impedance: 0.5Ω. Frequency: 45 to 65 Hz.

**RS485/232 port with data stamping and event recording memory (M C 485 232 M)**. Type: multidrop, bidirectional. Connections: 2-wire. Max. distance 1000m, termination directly on the module. Addresses: 247, selectable by means of the front key-pad. Protocols: MODBUS/JBUS (RTU). Protocols: modbus (247 addresses selectable by front key pad); BACnet MS/TP (instance numbers selectable by programming software). Data format: 1 start bit, 8 data bit, no/even/odd parity,1 stop bit. Baud-rate, selectable: 9.6k, 19.2k, 38.4k, 115.2k bit/s. Driver input capability 1/5 unit load. Maximum 160 transceivers on the same bus. **RS232 port**. Type: bidirectional. Connections 3 wires. Max. distance 15m. Protocol: MODBUS RTU /JBUS. Data format 1 start bit, 8 data bit, no/even/odd parity,1 stop bit. Baud-rate, selectable: 9.6k, 19.2k, 38.4k, 115.2k bit/s.

**Ethernet/Internet port with data stamping and event recording memory (M C ETH M)**. Protocols: Modbus TCP/IP. IP configuration: Static IP / Netmask / Default gateway. Port selectable (default 502). Client connections: Max 5 simultaneously. Connections: RJ45 10/100 BaseTX. Max. distance 100m.

**BACnet-IP with data stamping and event recording memory (M C BAC IP M)**. Protocols: BACnet-IP (for measurement reading) and Modbus TCP/IP (for programming parameter, instance number selectable by programming software). IP configuration Static IP / Netmask / Default gateway. BACnet-IP Port. Fixed: BAC0h. Modbus Port Selectable (default 502). Client connections: modbus only; max 5 simultaneously. Connections RJ45 10/100 BaseTX. Max. distance 100m.

**M C EI M**: Ethernet/IP port (with data stamping and event recording memory). Protocols: Ethernet/IP (for measurement reading) and Modbus TCP/IP (for programming parameters configuration). Topology: "star". Cabling: RJ45 standard, max cable length 100m. Level: "commercial level". Static IP: supported. ACD (Address Conflict Detection): supported. QC: not supported. UCMM: supported. Messaging: class 1 and class 3. Connection, "connection establishment: target". Supported features: list services, list identity, register ses- sion, unregister session, send RR data, send unit data.

**Operating temperature** -25°C to +55°C (-13°F to 131°F) (R.H. from 0 to 90% non-condensing @ 40°C) according to EN62053-21, EN50470-1 and EN62053-23. **Storage temperature** -30°C to +70°C (-22°F to 158°F) (R.H. < 90% non-condensing @ 40°C) according to EN62053-21, EN50470-1 and EN62053-23. **Standard compliance**: safety: IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Pulse output: DIN43864, IEC62053-31. **Approvals**: CE, cULUS "Listed". **Connections**: Screw-type. Cable cross-section area: max. 2.5 mm². Min./max. Screws tightening torque: 0.4 Nm/0.8 Nm. Suggested: 0.5 Nm. **Housing** dimension: "A" and "B" type modules: 89.5x63x16mm. "C" type module: 89.5x63x20mm. Max. depth behind the panel. With 3 modules (A+B+C): 81.7 mm. Material, Nylon PA66, self-extinguishing: UL 94 V-0. **Protection degree**, screw terminals: IP20.

**Modules with data stamping and event record memory**: Event stamping. Type of data: Alarm, min, max, digital input status, digital output status as remote control, resets. Stamping format: Date (dd:MM:yy) and hour (hh:mm:ss) reference. Number of events: Up to 10.000. Data management type: FIFO. Data stamping. Type of data: Any measured variable can be stored in the memory. Stamping format: Date (dd:MM:yy) and hour (hh:mm:ss) reference. Number of variables: Up to 19 different type of variables can be stored. Time interval: From 1 minute up to 60 minutes. Data management type: FIFO Memory type: Data flash.

## ITALIANO

**Uscite relè (M F I6 R4)**: uscite fisiche: 4 (un modulo massimo per strumento) Utilizzo:uscita impulsi ed uscita allarme. Tipo: relè, tipo SPST AC 1-5A @ 250VCA; CA 15-1A @ 250VCA. **Ingressi digitali**: numero di ingressi: 6 (contatti liberi da tensione). Utilizzo: lettura stato contatti. sincronizzazione misure "dmd" e sincronizzazione dell'ora. Selezione delle tariffe dell'energia. Contatori gas ed acqua. Contatore Trip. Reset degli allarmi. Interfacciamento con i contatori watt-ora (+kWh, +kvarh, -kWh, -kvarh). Frequenza d'ingresso: 20Hz max, duty cycle 50%. Regolazione del prescaler: da 0,1 a 999,9 m³ o kWh/pulse. Tensione contatto aperto: ≤3,3VCC. Corrente contatto chiuso: <1mACC. Impedenza d'ingresso: 680Ω. Resistenza del contatto: ≤300Ω contatto chiuso,≥50kΩ contatto aperto.

**Uscite statiche (M F I6 O6)**: Uscite fisiche: 6 (un modulo massimo per strumento) Utilizzo: uscita impulsi ed uscita allarme. Tipo delle uscite: Opto-Mos. Segnale: V<sub>ON</sub>: 2,5VCC max.100mA V<sub>OFF</sub>: 42VCC max. Tipo d'impulso: programmabile da 0,001 a 10,00 kWh/kvarh per impulso. Uscite collegabili ai contatori di energia (kWh/kvarh). Durata impulso:≥100ms <120ms (ON), ≥120ms (OFF), secondo EN62052-31. **Ingressi digitali**: vedi uscite digitali in M F I6 R4.

**Ingressi di temperatura e segnale di processo (M A T P)**: Segnale di temperatura. Numero di ingressi: 1. Precisione (Display + RS485) ±(0,5%RDG+5DGT). Deriva termica: ≤150ppm/°C. Sonda di temperatura: Pt100, Pt1000. Numero di fili: connessione a 2 o 3 fili. Compensazione: fino a 10Ω. Unità ingegneristica: selezionabile °C o °F. Segnale di processo. Numero di ingressi: 1. Precisione (Display + RS485) ±(0,2%RDG+2DGT) da 0% a 25% FS; ±(0,1%RDG+2DGT) da 25% a 110% FS. Deriva termica: ≤150ppm/°C. Ingresso segnale di processo: da -20mA a +20mACC. Sovraccarico del segnale: continuo: 50mACC. Per 1 s.: 150mACC. Impedenza d'ingresso: <12Ω. Indicazione Min. e Max.: da -9999 a +9999. Fattore di scala completamente programmabile con posizionamento del punto decimale.

**Modulo ingresso per la corrente di neutro (M A T P)**: In: 1A. Precisione (Display + RS485): da 0,01In a 0,05In: ±(0,5% RDG +2DGT); da 0,05In a 1,2In: ±(0,2% RDG +2DGT). Deriva termica: ≤150ppm/°C. Tipo misura d'ingresso: mediante trasformatore di corrente. Rapporto amperometrico: fino a 10kA (10,000 max). Fattore di cresta: ≤3 (3A max. picco). Sovraccarico di corrente. Continuo: 1,2A, @ 50Hz; per 500ms: 10A, @ 50Hz. Impedenza di ingresso: ≤0,5Ω. Frequenza: da 45 a 65 Hz.

**Porta RS485/232 con stampa dati e memoria registrazione eventi (M C 485 232 M)**: Tipo: Multidrop, bidirezionale. Connessione 2 fili. Distanza massima 1000m, terminazione direttamente sullo strumento. Protocolli: MODBUS (247 indirizzi selezionabili dalla tastiera frontale); BACnet MS/TP (numero istanza selezionabile mediante software). Formato dati: 1 bit di start, 8 bit di dati, nessuna parità, 1 bit di stop. Velocità di comunicazione selezionabile: 9.6k, 19.2k, 38.4k, 115.2k bit/s. Dispositivi in rete 1/5 unit load. Massimo 160 dispositivi nella stessa rete. **Porta RS232**. Tipo: bidirezionale. Connessioni 3 fili. Distanza max. 15m. Protocollo MODBUS RTU /JBUS. Formato dati: 1 bit di start, 8 bit di dati, nessuna parità, 1 bit di stop. Velocità di comunicazione selezionabile: 9.6k, 19.2k, 38.4k, 115.2k bit/s. Dispositivi in rete 1/5 unit load. Massimo 160 dispositivi nella stessa rete.

**Porta Ethernet/Internet con stampa dati e memoria registrazione eventi (M C ETH M.)**: Protocollo Modbus TCP/IP. Configurazione IP: IP statico / Netmask / Gateway di default. Porta selezionabile (default 502). Connessioni utente Max 5 simultanei. Connessioni RJ45 10/100 BaseTX. Distanza max 100m.

**BACnet-IP con stampa dati e memoria registrazione eventi (M C BAC IP M)**: protocollo BACnet-IP (per la lettura delle misure) e Modbus TCP/IP (per la programmazione dei parametri, numero istanza selezionabile mediante software). Configurazione IP: IP statico / Netmask / Gateway di default: Porta BACnet-IP. Fisso: BAC0h. Porta Modbus selezionabile (default 502). Connessioni utente, solo Modbus: max 5 simultanei. Connessioni: RJ45 10/100 BaseTX. Distanza max 100m.

**M C EI M**: porta Ethernet/IP (con stampa dati e memoria registrazione eventi). Protocolli: Ethernet/IP (per la lettura delle misure) e Modbus TCP/IP (per la configurazione della programmazione dei parametri). Topologia: "star". Cablaggio: RJ45 standard, cavo di lunghezza max 100m. Livello: "commercial level". IP statico: supportato. ACD (Address Conflict Detection): supportato. QC: non supportato. UCMM: supportato. Messaggistica: classe 1 e classe 3. Collegamento, "connection establishment: target". Caratteristiche supportate: list services, list identity, register session, unregister session, send RR data, send unit data.

**Temperatura di funzionamento** da -25°C a +55°C (da -13°F a 131°F) (U.R. da 0 a 90% senza condensa @ 40°C) secondo EN62053-21 e EN62053-23. **Temperatura di immagazzinamento** da -30°C a +70°C (da -22°F a 140°F) (U.R. < 90% senza condensa @ 40°C) secondo EN62053-21 e EN62053-23. **Conformità alle norme**: sicurezza IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Uscita impulsiva DIN43864, IEC62053-31. Approvazioni: CE, cULUS listed. **Connessioni**: a vite. Sezione del cavo: max. 2,5 mm². Coppia min./max serraggio: 0,4 Nm / 0,8 Nm. Consigliata: 0,5 Nm. **Custodia**: dimensioni (LxAxP). Moduli tipo "A" e "B": 89,5x63x16mm. Modulo tipo "C": 89,5x63x20mm. Ingombro massimo dietro il pannello Con 3 moduli (A+B+C): 81,7 mm. Materiale: nylon PA66, autoestinguente: UL 94 V-0. Montaggio a pannello. **Grado di protezione**, montaggio: IP20.

**Moduli con la memoria di registrazione dati ed eventi**. Memorizzazione eventi. Tipo di dati: allarme, min, max, stato ingressi digitali, stato uscite digitali come controllo remoto, reset. Formato: data (gg:MM:aa) e ora (oo:mm:ss). Numero degli eventi: fino a 10.000. Tipo gestione dei dati: FIFO. Memorizzazione dati: Tipo di dati: ogni variabile misurata che può essere registrata nella memoria. Formato: data (gg:MM:aa) e ora (oo:mm:ss). Numero di variabili: possono essere registrarate fino a 19 tipi differneti di variabili.Intervallo di tempo: da 1 a 60 minuti. Tipo di gestione dei dati: FIFO. Tipo di memoria: Data flash.

## DEUTSCH

**Relaisausgänge (M F I6 R4)**: Physisch Ausgänge: 4 (max. 1 Modul pro Netzwerk) Funktionsbereich: für Alarm oder Impulsausgang. Typ: Relais, SPDT Typ AC 1-5A bei 250VAC; AC 15-1A bei 250VAC. **Digitale Eingänge**: Anzahl der Eingänge 6 (spannungsfrei). Zweck: Kontaktstatusanzeige "dmd"-Messungen Synchronisation und Uhrsynchronisation. Tarifauswahl: Energie. Verbrauchszähler. Auslösezähler. Alarme zurücksetzen. Schnittstelle mit Watt-Stunden-Zählern (+kWh, +kvarh, -kWh, -kvarh). Eingangsfrequenz: 20Hz max, Tastverhältnis 50% Multiplikator: von 0.1 bis 999,9 m³ oder kWh pro Impuls. Steuerspannung: ≤3,3 VDC. Steuerstrom: <1mADC. Eingangsimpedanz: 680Ω. Kontaktwiderstand: ≤300Ω geschlossener Kontakt;≥50kΩ offener Kontakt. **Statikausgang (M F I6 O6)**: Physisch Ausgänge: 6 (max. 1 Modul pro Netzwerk). Funktionsbereich: für Alarm- oder Impulsausgang. Ausgangstyp: Opto-Mos. Signal: V<sub>ON</sub>:2.5VDC max.100mA V<sub>OFF</sub>: 42 VDC. Impulstyp: programmierbar von 0,001 bis 10,00 kWh/kvarh pro Impuls. Ausgänge an Energiezähler anschließbar (kWh/kvarh). Impulsdauer:≥100ms <120msec (ON), ≥120ms (OFF), gemäß EN62052-31. **Digitale Eingänge**: siehe Digitale Eingänge von M F I6 R4.

**Temperatur- und Prozesssignaleingänge (M A T P)**: Temperaturensignal. Anzahl der Eingänge: 1. Genauigkeit (Anzeige+RS485): ±(0,5%RDG+5DGT). Temperaturbewegung: ≤150ppm/°C. Temperatursonde: Pt100, Pt1000. Anzahl der Leiter: 2 oder 3-Leiter Anschluss. Aderausgleich: bis zu10Ω. Technische Einheit: wählbar: °C oder °F. Prozesssignal. Anzahl der Eingänge: 1. Genauigkeit (Anzeige+RS485): ±(0,2%RDG+2DGT) 0% bis 25% FS; ±(0,1%RDG+2DGT) 25% bis 110% FS. Temperaturbewegung: ≤150ppm/°C. Prozesssignaleingang: -20mA bis +20mADC. Überlastsignal: Dauer: 50mADC. Für 1 s.: 150mADC. Eingangsimpedanz <12Ω. Max. und Min. Anzeige: -9.999 bis +9999 voll skaliierbar mit Dezimalstellenpositionierung.

**Modul mit Neutralstromeingang (M A T P N)**: In: 1A. Genauigkeit (Anzeige+RS485): von 0,01In bis 0,005In: ±(0,5% RDG +2DGT). Von 0,05In bis 1,2 In: ±(0,2% RDG +2DGT). Temperaturbewegung: ≤150ppm. Eingangsimpedanz: müssen externe Stromwandler angeschlossen werden. Wanderverhältnis: bis zu 10kA (10,000 max). Scheitelwertfaktor: ≤3 (3A Höchstspitze). Überlaststrom, Dauer: 1,2A, @ 50Hz. Für 500ms: 10A, @ 50Hz. Eingangsimpedanz: < 0,5Ω. Frequenz: 45 bis 65 Hz.

**RS485/RS422 Schnittstelle mit Datenausdruck und Ereignis-Aufzeichnungspeicher (M C 485 232 M)**: Typ: Multidrop, Bidirektional. Anschlüsse: 2-Leiter. Max. Entfernung 1000m, Abschluss direkt am Modul. Protokolle: MODBUS/JBUS (RTU). Protokolle: MODBUS (247 wählbar über die vordere Tastatur); BACnet MS/TP (Instanz-Anzahl wählbar über die Programmiersoftware). Datenformat: 1-Starbit, 8-Datenbits, keine Parität/gerade Parität, ungerade Parität, 1 Stopbit, Übertragungsgeschwindigkeit. Wählbar: 9,6k, 19,2k, 38,4k, 115,2k bit/s. Treiber Eingangsimpetanz 1/5 Leistungsaufnahme Maximal Geräte 160 am gleichen Bus. **Schnittstelle RS232**: Typ: Bidirektional. Anschlüsse: 3-Leiter. Max. Entfernung 15m. Protokoll: MODBUS RTU /JBUS. Datenformat: 1-Starbit, 8-Datenbits, keine Parität/gerade Parität, ungerade Parität, 1 Stopbitb, Übertragungsgeschwindigkeit. Wählbar: 9,6k, 19,2k, 38,4k, 115,2k bit/s.

**Ethernet/Internet Schnittstelle mit Datenausdruck und Ereignis-Aufzeichnungspeicher (M C ETH M)**: Protokoll: Modbus TCP/IP. IP Konfiguration: Statisch IP / Netzmaske / Standard-Gateway. Schnittstelle: Wählbar (Standard 502). Client Verbindung: Max 5 gleichzeitig. Anschlüsse: RJ45 10/100 BaseTX, Max. Entfernung 100m.

**BACnet-IP mit Datenausdruck und Ereignis-Aufzeichnungspeicher (M C BAC IP M)**: Protokoll: BACnet-IP (für Messungsanzeige) und Modbus TCP/IP (für Parameterprogrammierung, Instanz-Anzahl wählbar über die Programmiersoftware). IP Konfiguration: Statisch IP / Netzmaske / Standard-Gateway. Schnittstelle: BACnet-IP. Fest: BAC0h. Modbus Schnittstelle: Wählbar (Standard 502). Client Verbindung: nur Modbus: Max 5 gleichzeitig. Anschlüsse: RJ45 10/100 BaseTX, Max. Entfernung 100m.

**M C EI M**: Ethernet/IP Schnittstelle (mit Datenausdruck und Ereignis-Aufzeichnungspeicher). Protokolle: Ethernet/IP (für Messungsanzeige) und Modbus TCP/IP (für Konfiguration Programmierungsparameter). Topologie: "Star". Kabel: RJ45 Standard, max. Kabellänge 100 m. Level: "commercial level". Statisches IP: wird unterstützt ACD (Address Conflict Detection): wird unterstützt QC: wird nicht unterstützt UCMM: wird unterstützt. Meldungen: Klasse 1 und Klasse 3. Verbindung, "connection establishment: target". Unterstützte Leistungen: list services, list identity, register session, unregister session, send RR data, send unit data.

**Betriebstemperatur** -25°C bis +55°C (-13°F bis 131°F) (R.F. von 0 bis 90% nicht kondensierend bei 40°C) gemäß EN62053-21, EN50470-1 und EN62053-23.  **Lagertemperatur**: -30°C bis +70°C (-22°F bis 158°F) (R.F. < 90% nicht kondensierend bei 40°C) gemäß EN62053-21, EN50470-1 und EN62053-23. **Standardkonformität**: Sicherheit: IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Impulsausgang: DIN43864, IEC62053-31. Zulassungen: CE, cULUS "Listed". **Anschlüsse**: Schraubklemmen, Kabelquerschnitt: 2,5 mm². Min./Max. Anzungsmoment: 0,4 Nm / 0,8 Nm. Empfohlene Anzungsmoment: 0,5 Nm. **Gehäuse DIN** Abmessungen (LxHxB): "A" und "B" Module: 89,5x63x16mm. "C" Module: 89,5x63x20mm. Max. Tiefe hinter der DIN-Schiene mit 3 Modulen (A+B+C): 81,7 mm. Material Nylon PA66, selbstlöschend: UL 94 V-0. Montage: DIN-Schiene. **Schutzgrad**, Schraubenklemmen: IP20.

**Module mit Datenausdruck und Ereignissspeicher**: Ereignisausdruck. Art der Daten: Alarm, min, max, Digitaleingangszustand, Digitalausgangszustand als Fernsteuerung, Zurücksetzen. Ausdruckformat: Referenz Datum (TT:MM:JJ) und Stunde (hh:mm:ss). Anzahl der Ereignisse: up to Bis zu 10.000. Datenverwaltungsart: FIFO. Datenausdruck, Art der Daten: Jede Messgröße kann im Speicher abgelegt werden. Ausdruckformat: Referenz Datum (TT:MM:JJ) und Stunde (hh:mm:ss). Anzahl der Messgrößen: bis zu 19 verschiedene Messgrößenarten können gespeichert werden. Zeitintervall: von 1 Minute bis zu 60 Minuten. Datenverwaltungsart: FIFO. Speichertyp: Flash-Speicher.

## FRANÇAIS

**Sortie relais :** Sorties physiques: 4 (max. un module par instrument). Objectif: pour sortie d'alarme ou sortie à impulsions. Type: Relais, type SPDT CA 1-5A @ 250VCA; CA 15-1A @ 250VAC. **Entrées logiques**: Nombre d'entrées: 6 (exemples de tension). Fonction: lecture de l'état des contacts. Synchronisation des mesure "dmd" et synchronisation horloge. Sélection tarif énergie. Compteurs de Services. Compteur de déclenchement. Remise à zéro des alarmes. Interfaçage avec wattheuremètres (+kWh, +kvarh, -kWh, -kvarh). Fréquence d'entrée: 20Hz max, cycle de marche 50%. Réglage du poids de l'impulsion: de 0.1 à 999,9 m³ ou kWh par impulsions. Tens. contact ouvert: ≤3,3VCC. Cour. de contact fermé: 1mACC max. Impédance d'entrée: 680Ω. Résistance de contact:≤300Ω, contact fermé, ≥50kΩ, contact ouvert. **Sortie statiques (M F I6 O6)**: Sorties physiques: 6 (max. un module par instrument). Objectif: pour sortie d'alarme ou sortie à impulsions. Type de sorties: Opto-Mos. Signal: V<sub>on</sub>: 2,5VCC max.100mA V<sub>off</sub>: 42 VCC max. Type d'impulsion: programmable de 0,001 à 10,00 kWh/kvarh par impulsion. Les sorties peuvent être connectées à les compteurs d'énergie (kWh/kvarh). Durée d'impulsion:≥100ms <120msec (ON), ≥120ms (OFF), selon EN62052-31. **Entrées logiques**: voir entrées logiques de M F I6 R4.

**Entrées température et signal Processus (M A T P)**: Signal de température. Nombre d'entrées: 1. Précision (Affichage+RS485): ±(0,5%RDG+5DGT). Dérive de température: ≤150ppm/°C. Sonde de température: Pt100, Pt1000. Nombre de conducteurs: raccordement 2 ou 3-conducteurs. Compensation du câble: jusqu'à 10Ω. Unité technique: sélectionnable °C ou °F. Signal de processus. Nombre d'entrées: 1. Précision (Affichage+RS485): (0,2%RDG+2DGT) 0% a 25% FS; ±(0,1%RDG+2DGT) 25% a 110% FS. Dérive de température: ≤150ppm/°C. Entrée signal de processus: -20mA a +20mACC. Surcharge signal: en continu: 50mACC. Pendant 1 s.: 150mACC. Impédance d'entrée: <12Ω. Indication Max et Min.: -9.999 à +9999 échelle complètement programmable avec positionnement du point décimal.

**Module avec entrée courant neutre (M A T P N)**: In: 1A. Précision (Affichage+RS485): de 0,01In a 0,05In: ±(0,5% RDG +2DGT); de 0,05In a 1,2 In: ±(0,2% RDG +2DGT). Dérive de température: ≤150ppm. Type d'entrées de mesure: doivent obligatoirement être connectés à des transformateurs de courant externe. Ratio du transformateur: jusqu'à 10kA (max 10,000). Facteur de crête: ≤3 (pic max 3A). Surcharge de courant, en continu: 1,2A, @ 50Hz; pendant 500ms: 10A, @ 50Hz. Impédance d'entrée: < 0,5Ω. Fréquence: 45 a 65 Hz.

**Port RS485/232 avec enregistrement de données et mémoire d'enregistrement des événements (M C 485 232 M)**: type, circuit multipoints, bidirectionnel. Connexions: 2 câbles, Distance max 1000m, Raccordement directement sur le module. Protocoles: MODBUS/JBUS (RTU). Protocoles: MODBUS (247 à sélectionner au moyen du clavier avant); BACnet MS/TP (nombre d'instance sélectionnable par logiciel de programmation). Format de données: 1 bit de départ, 8 bits de données,pas de parité, parité paire, parité impaire, 1 bit de stop. Baud-rate: à sélectionner: 9.6k, 19.2k, 38.4k, 115.2k bit/s. Capacité entrée drève: 1/5 unités en charge. Maximum 160 émetteurs/ récepteurs sur le même bus. **Port RS232**. Type bidirectionnel. Connexions: 3 câbles, distance max 15m. Protocole: MODBUS RTU/ JBUS. Format de données: 1 bit de départ, 8 bits de données,pas de parité, parité paire, parité impaire, 1 bit de stop. Baud-rate: à sélectionner: 9,6k, 19,2k, 38,4k, 115,2k bit/s.

**Port Ethernet/Internet avec enregistrement de données et mémoire d'enregistrement des événements (M C ETH M)**: Protocole: Modbus TCP/IP. Configuration IP: IP statique / Netmask / Portail implicite. Port: à sélectionner (implicite 502). Connexions client Max. 5 simultanément. Connexions: RJ45 10/100 BaseTX. Distance max 100m.

**BACnet-IP avec enregistrement de données et mémoire d'enregistrement des événements (M C BAC IP M)**: Protocole: BACnet-IP (pour la lecture de mesure) et Modbus TCP/IP (pour paramètre de programmation, nombre d'instance sélectionnable par logiciel de programmation). Configuration IP: IP statique / Netmask / Portail implicite Port BACnet-IP. Fixe: BAC0h. Port Modbus à sélectionner (implicite 502). Connexions client, seul. Modbus: Max. 5 simultanément. Connexions RJ45 10/100 BaseTX. Distance max.100m.

**M C EI M**: port Ethernet/IP (enregistrement de données et mémoire d'enregistrement des événements). Protocole: Ethernet/IP (pour la lecture de mesure) et Modbus TCP/IP (pour configuration paramètres de programmation). Topologie: "Star". Câblage: RJ45 standard, longueur câble max 100m. Niveau: "commercial level". IP statique: prise en charge. ACD (Address Conflict Detection): prise en charge. QC: non pris en charge. UCMM: pris en charge. Messagerie: classe 1 et classe 3. Connexion, "connection establishment: target". Fonctionnalités prises en charge: list services, list identity, register session, unregister session, send RR data, send unit data.

**Température de fonctionnement** -25°C à +55°C (-13°F à 131°F) (H.R. de 0 à 90% sans condensation @ 40°C) selon EN62053-21, EN50470-1 and EN62053-23. **Température de stockage** -30°C à +70°C (-22°F à 158°F) (H.R. < 90% sans condensation @ 40°C) selon EN62053-21, EN50470-1 and EN62053-23. **Conformité aux standards**: sécurité IEC60664, IEC61010-1 EN60664, EN61010-1 EN62052-11. Sortie impulsion DIN43864, IEC62053-31. **Approbations**: CE, cULUS "Listed". **Connexions**: À vis, Section de câbles max. 2,5 mm². Min./Max. couple de serrage de vis: 0,4 Nm / 0,8 Nm. Couple de serrage de vis recommandé: 0,5Nm. **Boîtier DIN** Dimensions (LxHxD). Modules "A" et "B": 89,5x63x16mm.Modules" C": 89,5x63x20mm. Profondeur max. derrière le panneau. Avec 3 modules (A+B+C): 81,7 mm. Matériau: Nylon PA66, autoextinguible: UL 94 V-0. Montage: montage sur panneau. **Indice de protection**, terminaisons de vis IP20.

**Modules avec impression des données et mémoire d'enregistrement événement**: impression événement. Type de données : alarme, min, max, état entrée numérique, état sortie numérique comme commande à distance, réinitialisations. Format d'impression: référence date (jj:MM:aa) et heure (hh:mm:ss). Nombre d'événements: jusqu'à 10 000. Type gestion donnée: FIFO Impression des données, type de données: toute variable mesurée peut être stockée dans la mémoire. Format d'impression: référence date (jj:MM:aa) et heure (hh:mm:ss). Nombre de variables: jusqu'à 19 différents types de variables peuvent être stockées. Intervalle temps: de 1 minute jusqu'à 60 minutes. Type gestion donnée: FIFO Type mémoire : données flash.

## ESPAÑOL

**Salidas de relé (M F I6 R4)**: Salidas físicas: 4 (máx. un módulo por equipo). Finalidad: para salida de alarma o de pulso. Tipo: relé, tipo SPDT CA 1-5A a 250VCA; CA 15-1A a 250VCA. **Entradas digitales**: Número de entradas: 6 (libres de tensión). Finalidad: lectura de estado contactos. Sincroniz. de medidas "dmd" y sincronización de reloj. Selección de tarifas de energía. Contadores de la Compañía Eléctrica. Contador de disparo. Puesta a cero de las alarmas. Interconexión con vatímetros (+kWh, +kvarh, -kWh, -kvarh). Frecuencia de entrada: 20Hz máx, ciclo de trabajo 50%. Ajuste del preescalar: de 0,1 a 999,9 m³ o kWh por pulso. Tensión de contactos abiertos: ≤3,3VCC. Intensidad de contactos cerrados: <1mACC. Impedancia de entrada: 680Ω. Resistencia de contacto: ≤300Ω contacto cerrado ≥50kΩ contacto abierto.

**Salidas estáticas (M F I6 O6)**: Salidas físicas: 6 (máx. un módulo por equipo). Finalidad: para salida de alarma o de pulso. Tipo: Opto-Mos. Señal: V<sub>ON</sub>: 2,5VCC máx.100mA V<sub>OFF</sub>: 42 VCC. Tipo de pulso: programable de 0,001 a 10.00 kWh/kvarh por pulso. Las salidas pueden ser vinculadas a los medidores de energía (kWh/kvarh). Duración del pulso: ≥100ms <120msec (ON), ≥120ms (OFF), según norma EN62052-31. **Entradas digitales**: ver entradas digitales de M F I6 R4.

**Entradas de Temperatura y Señal de proceso (M A T P)**: Señal de temperatura. Número de entradas: 1. Precisión (Display + RS485): ±(0,5%RDG+5DGT). Deriva térmica: ≤150ppm/°C. Sonda de temperatura: Pt100, Pt1000. Número de hilos: conexión 2 o 3 hilos. Compensación del cable: hasta 10Ω. Unidad ingenieristica: seleccionable °C o °F. Señal de proceso. Número de entradas: 1. Precisión (Display + RS485): ±(0,2%RDG+2DGT) 0% a 25% FE; ±(0,1%lec. +2díg) 25% a 110% FE. Deriva térmica: ≤150ppm/°C. Entrada señal proceso: -20mA a +20mACC. Sobrecarga de señal: continua: 50mACC. Durante 1 s.: 150mACC. Impedancia de entrada: <12Ω. Indicación de máx. y mín.: -9.999 a +9999 ajuste de escala totalmente programable con posición del punto decimal.

**Módulo con entrada de intensidad del neutro (M A T P N)**: In: 1A. Precisión (Display + RS485): de 0,01In a 0,05In: ±(0,5% lec. +2díg). De 0,05In a 1,2 In: ±(0,2% lec. +2díg). Deriva térmica: ≤150ppm/°C. Entrada de medida: debe estar conectados a transformadores de intensidad externos. Relación del transformador: hasta 10kA (10,000 máx). Factor de cresta: ≤3 (3A pico máx.). Protec. contra sobrecargas de intensidad; continua: 1.2A, @ 50Hz; durante 500ms: 10A, @ 50Hz. Impedancia de entrada: < 0,5Ω. Frecuencia: 45 a 65 Hz.

**Puerto RS485/232 con registro de datos y memoria registro evento (M C 485 232 M)**: Tipo: multiterminal, bidireccional. Conexiones: 2 hilos. Distancia máx: 1000m, terminación directamente en el módulo. Protocolos: MODBUS/JBUS (RTU). Protocolos: MODBUS (247 seleccionable a través del teclado frontal); BACnet MS/TP (número de instancia seleccionable por software de programación). Formato de datos: 1 bit de arranque, 8 bit de datos, sin paridad, paridad par, paridad impar,1 bit de parada. Velocidad en baudios: seleccionable: 9.6k, 19.2k, 38.4k, 115.2k bit/s. Capacidad de entrada del driver: Carga unitaria, 1/5. Máximo: 160 transceptores en el mismo bus. **Puerto RS232**. Tipo: bidireccional. Conexiones: 3 hilos. Distancia máx 15m. Protocolo MODBUS RTU /JBUS. Formato de datos: 1 bit de arranque, 8 bit de datos, sin paridad, paridad par, paridad impar,1 bit de parada. Velocidad en baudios: seleccionable: 9,6k, 19,2k, 38,4k, 115,2k bit/s.

**Puerto Ethernet/Internet con registro de datos y memoria registro evento (M C ETH M)**: Protocolo: Modbus TCP/IP. Configuración IP: IP estático/ Máscara de red / Gateway por defecto. Puerto: seleccionable (por defecto 502). Conexiones del cliente: Máx. 5 simultáneamente. Conexiones: RJ45 10/100 BaseTX. Distancia máx 100m.

**BACnet-IP con registro de datos y memoria registro evento (M C BAC IP M)**: Protocolo: BACnet-IP (para lectura de medidas)
