

Energy Management Power Analyzer with plug-in Output Modules Type WM22-DIN

CARLO GAVAZZI

- Front dimensions: 9 DIN modules
- Analogue output by means of optional module (20mA or 10VDC)
- RS 422/485 Serial port by means of optional module
- Alarm output by means of optional module
- Dual pulse output by means of optional module
- Control of phase asymmetry

Product description

Three-phase power analyzer with built-in configuration keypad; Particularly indicated for the analysis of main, secondary and energy metering electrical variables.

Housing for DIN-rail or wall-mounting, IP40 (front) protection degree.

Completely sealable housing. In case of direct connection up to 100A, the measuring input terminals are suitable for cables with a cross-section

area from 6 to 35 mm². The special design of the instrument's housing allows to add at any time the interface modules, even when the instrument is already installed.

The following modules are available:

- for all versions: pulses output;
- only for the versions with auxiliary power supply: analogue output, RS485 port, alarm output or BUS Dupline.

- Class 0.5 (current/voltage)
- Three-phase power analyzer
- Back-lighted LCD
- 4 x 3¹/₂ DGT instantaneous variables read out
- 7¹/₂ DGT energy read-out
- Measurements of system and phase variables: W, Wdmd, var, VA, VAdmd, PF (cosφ), V, A, Hz, THD-A, THD-V
- Measurements of total energies: kWh, kvarh
- Measurements of partial energies: kWh, kvarh
- Energy measurements according to EN61036 and EN61268
- TRMS measurements of distorted wave forms (voltages/currents)
- Two basic models: direct connection 20(100)AAC, CT 5(10)AAC and VT connection
- Maximum value indication of W dmd and VA dmd (only 5A version); maximum value indication of A (only 100A version)
- Self power supply (available for some models only) or auxiliary power supply: 24V, 48V, 115V, 230V, 50-60Hz; 18 to 60VDC, 77 to 143VDC
- Degree of protection (front): IP 40

How to order **WM22-DIN AV5 3 X X XX**

Important note:

- The models from AV0 to AV7 can be equipped with any type of available modules (slot A and B).
- The models AV8 and AV9 can be equipped only with the "O" and "R" type modules.
- The AV8 and AV9 models can measure all the parameters even if the three phase system being connected is missing one phase.
- The AV2 model is suitable only for three-phase unbalanced system without neutral.

Function description

Input and output scaling capability

Working examples of the analogue output (Y) versus the input variable (x) - (input/output scaling possibilities).

Figure A

The sign of measured quantity and output quantity remains the same. The output quantity is proportional to the measured quantity.

Figure B

The sign of measured quantity and output quantity remains the same. With the measured quantity being zero, the output quantity already has the value $Y1 = 0.2 Y2$.
Live zero output.

Figure C

The sign of measured quantity and output quantity remains the same. On the range $X0...X1$, the output quantity is zero. The range $X1...X2$ is delineated on the entire output range $Y0=Y1...Y2$ and thus presented in strongly expanded form.

Wiring diagrams (optional modules)

Only open collector outputs: the grounds of the outputs are separated, and therefore it's possible to carry out, for the same module, two different connections. The load resistance (R_c) must be designed so that the closed contact current is lower than 100mA; the VDC voltage must be lower than or equal to 30V. VDC: power supply voltage output. Vo+: positive output contact (open collector transistor). GND: ground output contact (open collector transistor).

Front panel description

Keys for:
 - value programming;
 - function selection;
 - displaying the measuring pages.

1. Key-pad

To program configuration parameters and to display variables.

S-key to enter programming and confirm selections;

2. Display

LCD with alphanumeric indications to:
 - display configuration parameters;
 - display all the measured variables.

3. Removable label

Label to write the instrument ID number.

4. Hidden dip-switch

Enable/ disable the access to the programming procedure.
